rectly represent the law of the atmosphere: for example, we cannot say that the average temperature of Qnit, which is fuore thin 9,000 feet abose the sed-level, is the average temperatuce of the air 9 , woo feet aliove, and iner,
the sea. The only olservation worthy of any confidence the sea. Tbe only olservation worthy of any confidence is that of Guy-Lussac, taken during his celebrated ascent,
at a heiyht of 6,980 metres, or 7,634 yards, above the seaatevel. The difference of temperature between air at the surlice and at the height just mentioned was $\phi^{\prime} 1^{\circ} \mathrm{C}$. nearly i21 $\mathbf{F}$. Thi, if the decrease of temperature be unitorm, Inves a dimination of $1^{\circ} \mathbf{F}$. for every 105 yards or of $1^{\circ}$ C. fur every 173 metres of elevation. Tbe fullowing table wat dedaced hy IIumboldt from various observations. It will serve to show how far the temperatures of elevated regiuns on the earth agree uith those of the same height io the atouepphere, as deduced from the preecding. Tue first colnmn is the height of the land slove the level of the sea; the second, the mean temperature at and near the equator; the third, tbe the freezing point.

| Elevatioo is Yards. | Equator. <br> Meas Temp. Ceotig. | $\text { Meao }^{\text {Lat. } 45^{\circ}} \text { Teap. Ceutig. }$ |
| :---: | :---: | :---: |
| $\checkmark$ | + 270.5 | + $122^{\circ}{ }^{\circ}$ |
| 1065 | + 210.8 | + $5^{\circ} \cdot 0$ |
| 2131 | + 150 | $0^{\circ} \cdot 2$ |
| 3197 | + $14^{\circ} \cdot 3$ | $4{ }^{\circ} 8$ |
| 4265 |  |  |
| 5328 | $1{ }^{\circ} 5$ |  |

From the preceding talle, it appears that at the equator, on the average of 5328 yards, it rise of 205 yards
gives a fall of 10 C . But the fall is more rayid in the gives a fall of $1^{\circ} \mathrm{C}$. But the fall is more rayid in the
hilgher regions thao in thelower. From 0 to 2131 yards of clevation, an elevation of 234 yarde producers a fall of of clevation, an elevation of 23 yarda producrs a fall of
10 ; but from 3197 to 5328 yards, an elevation of 166 10; but from 319i to 532 y yards, an elevation of 106 finito extent of the atmosphere. derived from the preceding, is as follows: It we suppose an elevation of 200 yards to produce a fall of $1^{\circ} \mathrm{F}$, it follows, that, at a
height of forty niles alove the level of the sea, the temheight of forty miles above the level of the sea, the tem-
periture of the air mast perature of the nir mast le $30^{\circ} \mathbf{F}$. below that of the
gea, or certainly more than $300^{\circ}$ below the freezinc-point. sea, or certaioly more than $300^{\circ}$ below the freezing-point.
Thery is the etrongest reason to suppose that no gas wo Thers is the strongest reason to suppose that no gas wo
know of would preserve its gaseous stato at this low temperature, but would become liquid; and thongh no temperature, but would becone liquid; and thongh no
gas has yet been rendered liquid ly reduction of temgas has yet ben rendered liquid ly reduction of tem-
perature, yet several have heen reduced to that state by cold and pressure united. - The pressure of the $A$ is one of its most important properties. We owe the determination of the weight of onr $A$. to nn invaluable instrument, the Baromeler. The action and management of this instrument are explained under B ARometER ; suffice it here, that the corrected height of the mercurial colomn
represeots the beight of an euvelope of mercury at represeots the height of an euvelope of mercury, at
the temperature of $32^{\circ} \mathbf{F}_{\text {. }}$, which would equal io weightt the temperature of ${ }^{32 \mathrm{za}}$. ., which would equal io weight
the entire envelope of the earth. In so fur ns this elethe entire envelope of the earth. In so fir as this element goes, our actual A. might be supplanted by a inches. A mercurial column 2997 inches in height. inches. A merchrial column 29.97 maches in height
and 1 sinuare inch in section, weigbs $1+73$ lbs.; which and 1 square inch in section, weigbs $1+73168$. ; which
gives us the equivaleut hcirlit of a column of atmosgives us the equivalent cight The word atmosphere is pheric air of the same section. whe ford almazphere is square inch of surfice, so that when we qpeak, in
Muchanics, of the presure of steam ona loiler as amounting to tirce $A$., we meas a pressitre of athut 45 lbs. on the square inch. The pressure on a square inch being thas ascertained, we have merely to multiply it by the number of square inches on the earth's surface to obtain
the total weight of the $A$. It amounts to 11-6ioss trilthe total weight of the A. It amounts to 11 - $\bar{t} 085$ trillions of lbs., or about $1880 \frac{1}{9} 00 \overline{0} 0$ of the earth's mass. -1t appeare, from observation, that the height of the mercoutal $A$. is not the same in all latitudes, nor in any
lucality at all scuson, or at all honrs of the day. The pressure of the A. in the northers hemisphere increakes as we recede from the equator, reaching a maximum at 30 N. Lit, and decresimg fromso to bo 30 , ineroitaguin due to the accumulatien of air ut that latitude by the due to the accumulation of air at that latitude by the
action of the trats-wints, q. v. As the hasat of the action of the truuc-winuts, q. v. As the hast ou the and canses the air at the top of the heated colmmu to overflow, we wonhl expuct that, during the year, the barumetor would stand at a minimum in sumaner, and a maximma in winter. In reality, however, although the barometer is hifherst in millwinter, there is nuother maximnm in milsummer, making thus two minimaone in epring, the other in autumn. This urimes from the part which watery vapor plays in the pressare of the atindephero. Tho lunt of nidsummer introinces into the nir a barge quantity of moisture, in the form of dry nir. nitiget what wonlh otherwise the the minimnm bry air. nuber what womingherwine the that at which it stanly in mpring anil autume. Similar causers affect the pressure of the $\lambda$. during the $2 d$ hours of tho day. There are two maxima - one at $10 \mathrm{~A}, \mathrm{M}$, the other be-

It wits uhinitel by Democritus, in bis Cosmog my, and afterwarle hy Epfcirus to whom its celebrity is chi-fly owing. The followin: acount of this doctrine is takea fron Ir. Guod's Bma Homry coutcined in the writinas if Epicurus aud his followers:- The A, P of Epicnrus, in its mere phasion contemplation, allows of oothing but matter ant space which are equally iufoite and anbountlet, which hat equally existed from all eternity, and from different combinations of which every visible form is oreatel. with each other; for whatever mitter is, that space is the reverse of; and whatever space is, matter is the
contrary to. The actually soliai parts of all bodurs. contrary to. The actually solini parts of all bodn-s.
therefore, are matter; their actu a pores, space: and the parts which are out altogether solid, but an internixtur of solidity and pore, are spaces and matt'r combined. Anterior to the formation of the muiverse, space and arter state. Space in its elementary state, is alsolut, tary state. Space, in !ts elementary state, is alosolute and perfect void: mintter, in its elemphtary state, con-
sists of inconceivably minute seds or atoms si small that the corpuseles of vapor, light, and heat are compounds of them: and so sild that they cimunt pensibly be broken or abrated by any concussiun or folence
whatever. Every atom is pois ssed of certain iotriasic powers of motion. Under the old schuel of Democritus. the perpetnal motions hence pronluced were of two kinds: a descending motion, froin the uatural gravity of the atums: not a rebomadng motion, from coniash. Besides these two motions, Epicurus ad thuthal clash. Besides these two motions, Epicuras of a third, by which, in sume very small degree, they descended in an oblique ur curviliaear direction, in thas respect resembling the oscillations of the macnetic beedle. These infinite groups of atotus, flying throngh all time and space in diff-rent directwos, and under differeot laws, have interchang ably tried and exhibited every possible mode of reacontre, sometimes repelhed from each other by a coucussion, and sometimes aphering to each other from their own jagged or pointed cou-
truction, or from the casmal interstices which two or struction, or from the casinal intersticus which two or
more connected atoms must prodnce, and which may be more connected atoms must prodnce, and which may owal. or syuare. Hence the origia ut componnd and visilite bodies: bence the origin of large busses of onittic heace, eveatualiy, the origin of the world itself. When these primary atums are closely compactsd. anf bit kinds of sulastances which we denommate solids, as stunes and metals; when they are lunse and disjoiated, and a large quantity of space or va:aity is ioterposed, they exhbit horlies of lax texture, as wool, water, and
vapor. The world, thmi genderated, is perpetualy susvapor. The world, thmi genderated, is perpetnally sus-
tained by the application of fresh tides of elempentary tained by the application of fresh tides of clempentary atons, flyiug with incooceivable rapidity throuen and occupying the places of those that are ns purpetually Aying off. Yet pothing is eternal or immotable out these ctementary sopels or atoms themselvis olre con dissolving inth their original corpinscles. with tos Iadians, he made, io Oct., $158 \delta^{3}$, for the large with tos ladians, he made, io Oct., 1583 , for the large
bay in $26^{\circ} 30^{\prime}$ Lat, to which he give the oame of st. Brano. Here he took cercmonial possession of the prov. of Lower Califoraia, th the name of the Spanish govern-

Atone' $v . n$. [at and one, as in Lat, ad, to, and unus, one; i.e. to be as ene, to recoacile, which is the primary meaning of the word.] To stand as as snibstitate or an equivalent for; to stand for; to make expiation.
v. a. To make reconciliation; to expiate; to satisfy, or render satisfaction.
.
or of some mi, $n$. A substitution of sinmething offered, otherwise bersooacted; expiation; satislaction; reconciliation.
"Surely it is not a sufficieat atonement for the writers, that
they profess logully for the goveruminn."
"He seeks to make atonement
Between the Duke of Glo stor aud your brothers."-Staks.
(Thent.) In theology, A. has respect to offences committed against the Deity; it is partly ceanected with that of sacrifice, $q . v$.; bat it is not illentical with it; for
it is not certain that all sacrifices had $A$. for their olject; it is not certain that all sacrifices had. $A$. for their object; and sucrifice, as commonly understood, was oaly ove markable for its autiquity and universality, proved by the earliest records that have come dowa to us of all nations, and by the testimony of ancient and tares, we have aumerons instances of expiatory rites where $A$. is the promizent featurs, ocrupying, in fact, a farge portion of the four last books of the Peatateuch. n some cesps the A was tmade for a specific offece Lev. iv.; Num. xvi. 46); in others it had reference t a state of tranggression, as especially in the case of the scipegoat, on the day of expiation. (Lev. xvi.) - The offender again cither atoued by his own person:la act, or received the benefit of A. by the act of anothar. (Lew.iv.) by means of the heathen recurds, we meet with the same notion of A. The practice of general atovement among the heathen natioas, wh.tever may have been its origin. nust havo been greatly encouruged by a certain article in the papular creed, which is probably expressed pretty accorately by the saying put into the mouth of Solon by Herodotux, that "the Deity is altogether a jealous being, aod fond of troubling the even course of affairs, - Au instaucs of $A$. meets us in the very opening of the liaid. Agamemoun haviog offisaded A pollo in the person of his priest, by refasing a ransom for his daghter, is not cun-
tent with restitution, but proceeds to atooe for his fanlt ent with restitution, but proceeds to atoos for his fanlt hy un offering, the purpose of which is declared ly Ulys-
ses (ll. i. $4+2$ ): "A gatmemnon sent me to sacrifice a sacred hecatomb to A pollo in behalf of the Danai, that we may appease the Suvereign Gud."-Among the many other inPhirenia by hut father to appeass the wrath of Diana, is distiognished by the remarkable circumstitoce of the snbstitution of one victino for another by the offended geddess. - if we parsne our inquirics through the accounts left us by the Greek and Ruman writers of the barbarons nations with which they wure acquainted, from India to Britain, we shall find the eame notion and siailar practices of $A$. It shows itself among the varions tribes of Africh, the ishanders of the South seas, und even that most preculiar race, the natives of Austr-lis, either in the shape of some offering. sally acknowledged by the belfevers in revelation, that the Levitic A. were in part at least, typical of that onu great sacrifice on which the Christian doctrine of the atonermont is fonnded. The nature of this publicntion does not allow us tu consider thin purt of the sniject at a length and in a manner suited the its importance. We cath de tittle more than state whut in umberstoud by the Christian when he speaks of the $A$. He does not consiler man, nceurding to the heathen notion already men-
tiuned, to bo the object of a capricions mad vensemi enmity, fat throagh a sinfal mature sum practices maid affer tions confirmable to that nature, to have come into antate of aliemation from Gud; fanther words, he believer that God is just aud holy, that man has siazeed, and minn ther believen that the Divinu Being, rev calced to ns under the title of the sun of God, interposed between the sintence und itn exerention, sulfi-rell in onr stead, and atoned by him death for our sin; thant the immethate convequrnces Wrre, remiedinn of the orikinal mentence, and restoration to a state which is atill prothntimary, bit in which man

 nacrifiev itsent, and the further purpene of God in cansing It to be publicly made, and proveding that it sloond bo
aniversally known. He supposes the knowledge of the fact to be necessary to the formation of the Christian character, aod its noral consequences to be a deeper sense of the turpitude of sin; whereas there might otherwise be danger lest that should be lightly accounted of which appeared to have been lightly torgiven; and also
a new and powerful motive to a fove of the Suprenie a new and powerful motive to a ove of the supreme
Beiog, supplyiag a remedy for that selfish priacijule which might prevall, if the only motives to obediance were the hope of reward and the fear of punishment.- We have eadeavored to state the ductrine of the $\boldsymbol{A}$. in such terms as ony be accopted tyall who accept the ductrine itself on the aathority of Suripture - We bave also without qualification called the ductrive in question a doctrine of the Christian religion; though we are well aware that there are soase whoze views of the gospel dispensation and interpretation of Scripture have led thent, while fully admitting the divine ongia of Curistianity, to reject as unscripisal we doet being lianited, we are obliged, with due deference to all religions twakers, to hmit ourses to the general belief. ton'er, $n$. Atra'to, a river of S. America, in the United States of Colombia, dep, of Choco, which after a course of 200 miles northerly, enters the Gulf of Darien. Suall vessels was purpused to connect this river with that source. It Juan, and thus form s canal which will join the Atlan tic and Pacific. Atre'ns. ( Myth.) son of Pelops and Hippodamin. He and sippus, from jealousy of the affection entertained for him by their father. Thereupon, they fled to Earystheus, with whose daughter, Erope, $A$. anited himself, and,
after the death of his father-in-law, became king of Myafter the death of his father-in-law, became king of Mycene. Thyestes, yielding to an unlawful passion for the
wife of his brother, dishonored his bed, and had two sons wife of his brother, dishonored his Led, and had two sons Thyer. A, after the discovery of this injury, banished conveyed away secretly a son of tor revenge, 1uyestes gated him to inurder his own father. This design was discovered, and the yonth, whom gatent to the son of his brother, was put to death. Tuo late did the unhappy father perceive his mistake. A borrible revenge was neceskary to give him consolation. He preteuded to be reconciled to Thyestes, and invited him, with his two sons, to a feast: and after he had caused the latter to be secretly slain, he placed a dish hude of their flesh before Thycstes, and, when he had Bnished eating, brought the bones of his sons, and showed him, with a scornful smile, the drealful revenge which he had taken. At this spectio, the poet eay, hise in his course,

The trembliog leaver."- Mutton-
Att'wood, George, n distinguished English physicist, Q. $17+5$; s. 1807 . He is known by his treatise on the pally ly a mechanical contrivance known as Attuond's Machiae, the principle of which merits some notice. Perhaps no questions in
than those concerning the fall of Ledies. They wire, however, for a long time, the sibiject of only periments. Budies fall periments. Budies fisll in on short a time appace, that it was fonnd impossible to get to elovations, fitted in other ways for the purpose of experiment, sufficient to let un observe them easily. Besides, the resistynce of the aur, though very slight at the commoncery, yet becomes conmiderable as its velocity increasus. The machine of $A$. proposes to reduce of $A$. proposer to reduce
the velucity of falling bowlies, and to enable ns to observe their laws, by giving us time for ex perimenting, and by rendering the resintance of the uir comparatively invignithruht. - We give the following descripautrotemany J. A. Gillet of Cambridge. The nu chine of $A$. consists of an upright colannn, with a puiley at the top, or-
ranged to run with the ranged to run with the
least possible friction. Over this pulley passes a ooril, to which are at tachenl the equal weights $\boldsymbol{B}$ and $\boldsymbol{E}$, $\boldsymbol{C}$ and $F^{\text {are }}$ mavable shetves, the for-
mer of whicls hat a cir cular hole in the centre, largesenonch to let the weight $\boldsymbol{B}$ juas through it. $A$ is a clock, beating gevolula, and carried by the peniliginan $D$. Whet wo wish to make tho woight $B$ fall, we place njusit a rmall borizental bar of iron, which is tho long to pasin throngh When, therefore, the wright drupm through this tole, the bar will be apon the shelf. If the weight $B$, with the har np ill the fonul that the furgon It, lee sllowed to fall, we buch during one force of gravity will pull it slow a that the tur shall be romoved at the end of the first aeconll; it will then be fomul that the wifight will fall two inches the next necoml. At the end of the first necond then, the wosklit is projected vertarnlly downward, with velocity of two inchee por mecond. If now the lur is
have fallen three ibehes during the 2 d second. Hence, the force of gravity pulls the weight down the 2d secood an inch forther than its velocity at the leginning of this cocond would have carried it; that is, just as low as
cravity would have pulled it from a state of rest. - By means of this mame machine the case of a londy projecter vertically upward can be illustrated. While one of the weights is falling, the other weight is rising. Suppose that one bar be placed upon the ascending weightit, and twe on the descendiog weight; the second a little hravier than the first, so that it shall bear the same ratio to the whole weight now as the one bar used at first. We will sive one of the weirhts a velocity downward of two will trive one of the weig the ether weight the same velocity upward. Suppose now that at the end of the first second both hatre the caught off the descending wijkht, the other werght will rise not two inches, but only one during the next second. Ilad it net been for the action of gravity upen the bar resting on it, it would have risen two inches. But we have already seen that gravity acting upon this bar will canse the weight to fall one inch fromi a state of rest; hence it is palled just as far trom the place it wutd have reached as it wond bave been palled from as state of rest.- See Gravitr, Motion, ac. for 30 years. Hercnles was desired to clear away the filth in one day, and $A$. premised, if be perfirmed it, to give him a tenth part of the catie. This task Hercules or, as some siy, the Penews, through the stalle, which inmediately carried away the dung and filb. A, not only refused to perform his ensagemeot, preteoding that Hercules had used artifice, and experienced no labor or trouble, liut banished his own sub, Phyleus, froou hit kingdom, for supporting the claims of the hero. Unuri this, a war commeoced, and Nercules conquered Ehs, pot $A$. to death, and gave his kingdom to Phyleus. A. has been called the son of Nl, becanse Elis signities the
sum. After this death, he received the honers usually sun. After his
paid to heroes.
An'gelite, $n$. (Min.) A mineral of massive form. Lnstre of cleavagesurfuce, pearly. Colorless, lut generilly of a pale red. Comp. Phospheric acid $35 \cdot 3$, alumina $51 \cdot 3$, watar $13.4=100$. It oecurs iunbedded in other plous-
phates at the irun mine of Weatana, in Sweden. - Duna. Au'ger, n. [Dut. avegaar; A.S. nufegar or nufrgur.] An iostrumpnt used for buring large holes, by carpenters, wheelwrights, shipwrighte, and othere. It conviets of an iron blade termiuating in a steel bit. with a baodle placed at right angles with the blade. When the $A$. has a straignt chanuel or groove, it is sometimes called a pod $A$.; when it has a spirsl channel, it is termed a cring the earth in order to iscertuin the bature of the burbil $A$ minerals, or whether wster is exieting in a subsoil, or minerals, or whether wster is exieting in a
u'ger-bit.
ungerbit. n. (Carpentry.) A bit with a cutting inge'reau, pierae Franeols Cbarles, Deke of CastiouloNe, a celcbrated French general, b. at Paris in 1757 He joined the army us a private soldier, proceeled to Spain, and soon rose to the rank of adjutant-general. He then took high command under Napoleon I. in Italy, and in 1796, at the head of his own brigade, stormed tha bridge of Lodi. To him Napoleon owed the brilliant victones of Castiglione aod Arcole. A., hasing becn of the capital, and led the conp d'flat, or revolution of Fructidor ty which the enemies of the Directory wor seized and overthrown. Appointed to the command of the army on the Gurman frontier, he became so wildy democratic that the Directory displaced him, and sent him to Perpignan. He refused to ussist Napoleon in the revolution which preceded the coosulate and the empire. In 1805, heing created a Marshat of France, A. commanaed at the reduction of the Vorarlberg, was at the buttle of Jena in 1806 , and aceonpamied Napiteon to Burlio He commanded the French at Eylua in $180 \%$ and in 1809 and 1810 , conmanded in Catalonia, where he committed great excesses, A. Was at the grear 1 anties compign bed at 1 ,
 superior numbers, he retired to the sonth, nad display ing little attachment to Napoleon, acknowledged the Bourbone, retained his honors, und became a perr. During the "hundred days" of 1815 , he remained in privacy but on the return of Louis XVIII., he $\theta$ gain sought pub lic life; and as the last act of an eventinl life, vuted for the condemation of his brother ooldier, Marshal Ney, to an ignominions death. For this the French people have never forgiven him. D. in June, 1816.
A uget, ( $n-z h h^{\prime}{ }^{\prime}$ ) n. (Fr. auget, auge trough; from Iat alveus, hollow.] (Mel.) A tabe or hollow case chargid nith powilcr, and reaching from the chansber of a Aug'guи, a fortificd town of Hinduetan, prov. Mnlwin ing full, u fortind town of hinduetan, provisions of sinde, an a rocky eminence, 1,598 feet ahove sea-level.
Augh'aval, or Orobeval, a parieh in comity Mayo, 1riland. Area, 33,695 acres, cousisting mostly of bulle amil lmigr. Ap. 9,000.

After an ioglo rions reige of one year, A wats dethroned by Odacer king of the lleruli, who suffered him to live in retire ment at the villa of Lacullus in the Campagna, for the remainder of his days.
Angas'tus, first of the Roman emperors; otherwise
named Cales Ocravius, afterwards Caics Jelies Cesan named Cafes Octavius, nfterwards Caits Jelies Cessan Octavianos, abil later A.; the latter being a titie of honor conferred on bim as tirst emperor. and thongh horne officially by his succexsors, is nxed in history as his pro-
 son of Cains Octavius and Attia, daugliter of Jutia sister of Julins Casear, who named his great nephew Octavius hia son and heir. At the age of 18 , he was at Appolonia on the Adriutic, engaged in his stublies, when the death of Cassar took place. Octaving then twok his own conerse, repairing liset to Brandisimm, and afferwards to Rome, where, despite the opposition of Antony, he sppeared before the pratur, formally chamed his inheritance, accepted its responsibilities, and received io consequence the name of Caios Jolids Cazis Octavianus, By the law of Rome, he was henceforth regarded as the virtual reprenentative of Ciesar as much as if he had
been the dictater's soo. in $43 \mathrm{D} . \mathrm{c}$. the yonng adventurer been the dictator's 600 . In th p. c. Che yonng adventure Was apprintenf pretor, with a mow yoned the consule Ilatius and Hausa, for tho propose of relieving Mutima where Antony was lesieging Decimns Brutns Antouy where defeated and driven across the Alps, the two conanls were slaio in Issttle, and © ctavins remained the sole anil successfal general of the forces. Antony and Lepidns having beconne allies, recrossed the Alps, and Octnvius wats rupointed to the joint command with Decimus llutus. Octavius now indnced the froops to prononnce in his favor for the consulship, and entered Roms, where he and hix kinsman Quintas Polius were appointed
consnla, and his own muption by Casar was rugularly
 vins ingotinted with Antony and Lepidue, when a trinenvirate was formed, and a compuet madr, by which Antuny was to have Gaul; Lepidus, Spain; and Octavina, Antuny was to have sicily, Surdinia, sul Atrica, for his own share. Aftur
Sicile the hattle of Plitippi, by which the power of the Repullicent party was extingnishesh, a new diviaion of the pravincerg wan offected, and Lcpidus lost his mhare, leaving Antony and Octasine to contenil for the supremacy, Sicily wis ledd ly goxtur Pomperius; intad O-thvins, unnhle to obtain poserssion of thut island, marrifed seribo-

vins; and this temporary reconciliation led to a coms. lined action on their part, which resulted in the dow ofill of Pompey, and the acqoisition of Eicily. The period had oow arrivel when the definite struggle between Antony hai forsitun Octavia, owiog to the fascinations Antony had Cleopatra Octarios therefore declared wur against him, and at the naval battle of Actinm, 31 B. c., biterly defeated him. Octavins now wielded the entire power of Rome, which became at peace with the world. Agrippa, whose advice had given him noiversal dominiod, connselled him to renonnce lis anthority ; hat Mrecenas, whom he also consulted, advised him otherwise. Octasius commenced the consolidation of his power liy reforming the semate, for which he received the title of Prince of the Senote, which had alwaye been bestowed by the ceasors un that citizea who had most deserved well of his condtry. In $29 \mathrm{~B}, \mathrm{c}$, he received the title of Imperotor, the titlea of kiog and dictator being sigu his power to the sedate; this was refnsed, and he coneented to remain at the head of the government for a periorl of 10 yerrs. This act was constantly repeated to the edd of his life. In the same year, Octaviue also received from the senste, and the people, the title of A"gustus, by which mame be was heoceforth knowo. Duriog the to years of bis comparatively peaceftrign, A. devoted himself to secure the welfare of the State and people of Rome. His bame is identified with trimmphs in arts, as well as in arms. He cansed to be execnted impurtant phblic works, and improved abd beantified the city, so that it was said, "he fonnd the city ber of the empire, which had been previonsly nuch neglected, and by his enconrngement of literatnre and art. gave a name to the must spleulid era of Roman letters, that of the Augustan Age. A. D. at Nols, A.d.14. Ife was handsome, bnt of middle statore; alstemione, and rigid in lis morats; noassunsiug in deportment; of unwearied iodostry; and atso a ready speaker, a great reader, and a diligent writer.

Anro'ra Anstra'lis, n. [Lut., smethern daybrcak. (Phy.) A phenomunon correspunding to the Aurora bic Anro'ra Borea'lis, n. [Lat., nurthern doybre
(Phy.) A sinular and most benutiful phenomenon,
sisting of mellove lights variously cylored, which dart certain seasons, from all parts of the lorizon, and erally rather brigiter tow urd the west. By-and-by. thi dim mass assumes the form of a circalar segment, rest ing at each end on the horizon; the higher part of it being surroun lel hy a white light, sometimes resolving itself into ona ur two distinct luminous arca. Then be gin those well-known beams and shouts of lirht of dithey break up into inrizhtoatches, ns if the whule of them were throwa into a sort of palpitation. When the tisex tensive, these beans, although constantly shifting, cin verge toward the zanith, where a centre, oranperbane erown, is formed. As the phenomanon diminiabesinintensity, the jets contime, but the crown shifts, and it seem to be sometimes on one side of the sky, sobetimes on the other. At lemeth these movements cease; the light is with drawn nearer and nearer to the wostern horizon; the obscure segment, ns it also diminishes, hecomes luminons and finally, every trace of it disappears. Fig. 242 ru resonts one of the most extraorininary appearinces

General Desc.-The empire of $A$. exhibite every variety of eorface; and the geugraphical features and physical characteristics of the many countries comprised that we shall here but group togather tha more salient that we shall here but group togather ha more salaent
leatures of their nstural appearauce as a whele. By leatures of their nstural appearance as a whola. By
referring the reader to the several divisione and states as they will appear under their alphabetical heade in this work, wa shall better preseut a more intelligibla aud euccint account of their special topogrsphical attributee.-Mountains. Tha principal mountau бystems are: 1. The Hercyno-Garpatiuan chailu, which divides the regione of the German Ucean and Baitic Sea from those of the Black Sea and the Mediterranean. Rieing in Switzerland, thes range traverses the orarlberg and bivart on offoluot callod the Eragebirye stretehiug into tha lattar cuuntry and into Saxony. Pruceeding into tha latter country, and into saxony. Proceeding Piresh, nearly to the Danabe, where, dividing Monavia from Bohemia, it seuds out a hrasch joto silessa, called the Ruescongelinge. The cuntral Carpathase extetnd through Huugary as far as the sources of the Save and Dniester, and their eastern link covers N.E. Huagary, the Bukowine, and Transylvauia. 2. The eecond nountain ranga, covering a larger tract of country, and pus bessing wore elevated summits than the Ciarpathat chaiu, divides the region of the Mediterranean from that of the Black Sea; it stretches in taree chaine from the Tyrul, earall parallel to each uther, les eummits Tyrul, run Dearly parallel to each uther. 1ts 8 enmmita suow. The ceutral chau takes a N. Es, direction through sty ria into llogary; the morthera covers Northern Ty rol and the greater purtion of Austria Proper; the suuthern utrikes put from S. Tyrol into 1 taly, and pass iug through Myria and Croatia, joios the Bulksu in Bosina. Three important branchee upring from the lat ter chain, one of which, calied the Bakury Furest, pen etrates Il ungary; a $2 d$ divides the regiun of the Drava from the valley of the Save; and the 3d, stratching along the Aurnatic through Dalmatis, forme the ravg called Montenegro, from ats black color-- Volleys ond Pluzne, principally in Tyrol, Salzturg, styria, and Hilyria Large plaine are aloo found forming tha havine of the principal ravers, as those of Vienna, the two great plane of IIungary, and the plain of the Vistula in GaliciaRivers and Lakes. The more noticeable rivers are those of the Danube, with its nomerous aflluents; the Oder Vistula. Dalester, and Adige. The Jhme bounds the estrema W. frontier of the empire for a small portion of te course. The principal lakes are those of Atter Gmuinden or Traun, Hallstadt, and Angsere, Moneleee and the Neusiedler and Balatou lakes in Upper ilun-gary.-Clim. Funr distiact climates are found within the limits of thie empire. The nir is for the most part colds of winterare buth in ex tremes. Heavy rains occur in Tyrol and Yorarlberg, while, on the pther hand, Hungary and Dalmatia often suffer from escessiv druaght-Nat. Pronl. and Min. 've Marl'a, n. [Lat. Hful, Miry!] (Eccl. Hist.) A prayer of the Rounan Catholic Chardi to the Virgin Mary, se called from the words with whith it commances.
it is also called A agelica Nalutatio, or the Angelic KiluIt is also called Angelica Salutatio, or the Angelic Suhutation: these words being the lugimuitg of the salutation
which the angel addressed to Mary, when he anumuced which the augel addressed to Mary, when he anumuced
to her that she was to be the mother of the Saviour. The to her that she was to be the mother of the saviour. The invocation wis first used by the priests tharing mass on
the tth Sunday after Advent, Iny an ordiname of Girvory I. With the extended worship of the Virgin siace the Ilth century, the $A$. has come to be a lay prayer nearly as such at the end of the 12 th century. In the first half of the leth centary, the praypr came generally to receive, as a cooclusion to the earlier formula, the words, "Holy Mary, mother of Gind, pray for us sinners now and at the hour of our death. Ainen." - John XX11., in 13.66 , or-
dained that every C.tholic should, at the ringing of the hells, morning, noon, and night, repe.tt 3 . 1 res, which prayer is called Angelus. The Aves aro reckoned by the small beals of the rosary, which are bence called Are Marias, while tha large beals are nsmi in the Piter Ahas-
Uers.-As in Italy, according to the divisionof time pechhar to the country, the close of the 241 h hour coincides always with somblows. - when the lntle tall pions perouns to prayer,-it was usuab, and it is eveu now very comthis eustom Byron alludes in these fine lines:

Sve Nariat hlessed be the hour I
Have fete thut moment in its fullest power
Sink o'er the earth so beautiful and sof.
Or the faint dyiag day hy ma stole aloft,
Aod not a breath crept through the rosy wir,
Aod not a hreath crept through the rosy nir,
And yet the forest-leaves seend stirr dwith pray'r."

 Ablopessesis, ( $\left.a-b e-o-j{ }^{\prime} \mu^{\prime} e-s i s.\right)$ [ From Gr. $a$, privative, cal thisory of life, or of spontaneons generation, na con nected, more or less, with the Darwinian doctrine of evolution, lately stated as follows by Prof. Ernst Hreckel, of Jena, " 1 . The forms of organisms, and of their organs, result eatirely from life, and simply from the interaction of two physiological functions, fle erelity and adaptation. 2. Meredity is a part of the reproduction; adaptation, on the other hand, if part of the maintenance of the organism. These two physiological
functions depead, as do all forms of vital functions depead, as do all forms of vital activity, on the character of the physiological orgsas throngh Which they come into play. 3. The physiological oror cells), or they are parts of plastida (p. a andele of cells, cilia of protoplasm), or they are built np of nu merons flastids (the majority of organs) In np of nucases the forms and actions of the oremas rue to $t$ traced back to the forms and actions of the judividual plastids, 4. Plastids are either simple cytods (etructureless bite of protoplasm without nuclej) or cells ; lont since thess last have originally arisen from cytuds by n diffirentiation of the inner nuclens ' and the outar 'protoplasin, the forms uod vital properties of all their starting - puint. 5 , Tlie simpleet cytuda, fron their starting - puint. 5. The simpleet cytuda, from
 ti.lly nomb abmolately of nuthing pure than ans of structuralesw protoplasm - num alluminoid nit bit of carbon componnd: fill other conmpunenta of plastids have beon orlgimally formed surombarily from protophasm (phama prohnets). ©t The simplest imiependent organisms which wir know, and whith, ruorevere, cat br conceived, the monera, conmint, in fart, while living, of nothing else but thu suruplenc cytond, a structurele
bit of protophasm; and aince thoy ixhitit all forma of bit of protophasm; and aince they ixhitsit all formus uf
vital activity (nutrition, repronduction, irritalility vital activity (nutrition, reprodnction, irritalilly
movement), these vital activitios aro hero aluarily 198
hound on te btructureless protoplasm. 7. Protoplasm, or germinal matter (Bi/dungssthff), also called cell-substance or primitive sime ( Urschamm, is therefore the without exception the phenomena' are ratically bound 'If the lutfer are re carded as the reault of a peculiar vital furca imble dent of the protoplasm, then vecessarily also must the plyysical and chemical propertics of every inormanic natural borly bu regarded as the result of a pecnliar force not bound up with its substance. 8. The prooplasm of all plastids is, like all other albnmiuoid or protein bodies, composed of fonr inseparable eiements - cartoon, oxygen, hydrogen, and nitrogen, to which often, thongh not always, a fifth element bamely, eulphur-is adled. 9. The forms and vital properties of protoplasm are conditioued by the pecuto form a hipliy developed con combined itself 80 es fonr other elements naped. Compound with the three or bon never exhibit those pecnliar clienical and physical properties which exclusively belong to only a part of the compounds of carbon (the so-called 'organic com pounds ) ; on this acconnt modert chemistiy has re placed the term 'orgaoic compounde' by the more sim nificant term 'carbon compounds.' 10. Carbon, then, is that element, that iodivistble fundamental snhstance whicb, in virtne of its peenliar physical and chemical properties, otauns the various cattoon componads with heir peculiar orgatuic character; and in chief fashions this protoplasm, the 'matter of life' (Lebensstoff), AO that it becomes the material hasis of all vital pheand the other conpenent properties which protoplasm organism derived secondarily from it exhitat, their viscid condition and agaremation, their contion change of matter fon the one hand their facile decomposition, on the other their facile power of assimilation), and their other 'vital properties' are therefore simply and eatirely bronght ahont lyy the peculiar and complex manner in which carbon under certain condi. tione can combine with the other elemedts ${ }^{2}$ 12. The entire properties of the orgnoism are therefore nltimately conditioned wif equal oecessity by the physical aud chemical properties of carbon, as are the entire properties of every galt and every inorganic compound conditioned by the physicdl and chemical propertiee of bout Epmova Frame
author, B. at Dienze, dep Slentin, (alh-boo', a French studjes at the Lycee Clarlemagne, in Paris wun the prize of honor in 1848 , and passed ia $1 \times 51$ to the Frencl school at Athens. In Greece he directed his uttention to archeologicat stndiee, and mode his first appearance as an author with La Grece Contemporaine (18i5), which Wats well received. He published eoon after a kind of antobiographical novel, Tolla, followed by Les Bariage de Puris (1N56), and Germaine (I857). Ilis well-known pamphlet La Quention Romuine, which urged the abolition of the Popers tempral power, and was supposed to In 1860 he pullithed twe Emin New Map of Eurone, sul Prussia in 1890 New Map of Eurone, wif Prussia in 18tu. Among his Le Cas ile HU Guirin Judelon Rache, Le Turco, L'lnfolme nud Les Mariages in Pre vince. On the commencement of the conflict betweet France and Prisuia, $A$. went to the sint of a mir ns aper ciat correspondent of the Soir, null sent to that journal a scrios of articles whith attracted much attention. In Oct., 1872 , while viaiting a 1 roperty he posnesses in A1sace, $A$, was arrested by ordier of the Gcrmin governmant on acconnt of certhin muticles writton agaiust it in F'rench newapmpers a yrur before. Ainoss, a race of med who are believed to
duwn from kanatchatko, and to have taked to have come Japan, which they held matil displaced in their turn by the Japaoese from the Sunth.
Air-brake. (Mech.) The necessity of having som effective means of stoproog railroad trains was telt
soon as it was fonn possilite to run them at any consoon as it was fonm possinfe to run themat any conWas therefore presented simultaueonsly with the intrudrains increased, the importance of placillg theop under trains increased, the importance of placing then under
the control of the locomutive rumer became with wehch accident and its accompanyiag horrery orore eridem For years, therofore. inventors hive been cxercising, ing to devis successtialy, thasir mond chable the mat Who runs the enyine to apply the lirukes iostantly ob the whole train belind him. The first system, how-
ever, which may be said to have come near to fulfillevar, which may be said to have come near to fulfill-
ing the requisite condition ot an automatic brake, is ing the requisite condition ot an automatie brake,
the Air-brakr, or Atmospheric-brakr, invented and patented in 1869 hy Mr. George Westinghouse, and manu factured in Pitteburgh, Penasylvania. It may be sum locomotive, and in full vew of the engineer, an air locomotive, and id full vew of the engineer, an air-
pnmp is fastened to the loromotive frame. It is prophinp is fastened to the fromotive rame. it is proand is notionless only when the exphusive sorce of the compressed air in the reservoir, which hangs beneath the cuht (a cylinder of boiler iron suitsble to the dimen-
sions of the locomotive), hecomes equal to that of the ste.un. Thus as the pressure of ateam increases, the air-pump works. and the expansive force of compressed air is augmented. When the steauk is high, and the
possible demand for predt force of the brake consepossible demand for great force of the brake conse-
quently increased, the pressure of stean and air in the quently increased, the pressure of stean and nir in the furce is ulvaye maintainei. Pipes to convey the eompressed air extend from the reserwoir beneath the loco-motive-cab back under the whole train. Miuway beneat to act directly on the lever of the ordinary hand-brake, and dies not prevent the use of the latter hrake in conjunction. The the air-irake, or separate from it ir preserved thy hedyy rnhbur-hose connected hy a most ingenious brass culpling, so derised that, whon coupled,
valves are open and the compressed nir can move from the rescrvoir nnimpeded toexert its force: if any cars ar detached, thereby sumpering the comnecting pipe afte the torce lias been applied, the conpling accommotates
itself to the exigcocy hy unjointing, valves instautly close, precludiug the escape of the compressed air, and the engineer ipplies the brake (by opening a valve and permitting the escape of the compressed air from the reservoir through the condneting pipes) its force is exerted simultacously and equally ppoa every wheel of the train. The engineer hats entire control of satisfy th demand. The term Tacuum Brakes is used to dietin gush that particular class of brakes which are operated by atmuspheric pressure from those operated ny compressed arr. Both are, properly sprahing, air-trakeb,
the atmosphere being the means the atmosphere being the means cmployed to convey
the power used in both cases, vacuum-irakes operating by external, and dir-brakes, gl, called, by internal pressure. The Eamee vacuum-brake consists of a steann ejector, loented upon the engiue, and diaphragms upos the cars. The ejector, which the inventor of the hake, Mr. F. Kames, has greatly impliwed over the before the boiler, through a gradnating valve, makiug it pussalle to admit as little or as much steam as may be desired, the valve leing contrulled by a lever within convenient reach of the edgiluer. The essedtial part of the ejector consists of a donble tulue, the outer space of which commumeates with the sterm valve, nud the inner with the train nir pipes. Steam being admitted to the outer space, it escipes pist the enxions wacuum at that point, which the nir from the train pipes constantly rusliee to fill, and the eteadi und air are thrown out thgether at the tup of the ejector. The Eames
ejectur produces, at seat level, a vacuum ourresponding to 24 inches of mercury, or, approximately, a pressure
of 12 ponndy to the square inch. Iumediat the air tube nhove dencribed is a cbeck-vatre, to prevent
the inflow of air, und the consequent destruction of the vacunm, until such time ns the engineer desires to release his braken. He dues this by means of another valve, culled the release valve, the handle of which 18
phaced in near proximity to that which controls the admission of steum. There threc valves-the steam, reChe ejector, the two formare only roquiring to bue purtated by hamb, aud it is therefore a very simple piece of oucct h namm, and not likely to get out of order. The dinphr.ıgm is made of rub clamped by the edgis to the dhaphragm shell. The hat. ter is of cast tronand approuches n hemisk here in shate, over the opens side of which the rubber diaphragm in
fant ped. The air helug exhauted from this shell, the dinpliragm will be pu essed iu with a foree proportionnte to the area of the diaphrugn. The Eanaes dinpliragm
is furnished in different sizes, accurding to the vervice
reqnired, for light or heuvy cars, aod varying in aren
from 180 to 500 square inches The dlaphrigm ehell is preferaty fasteaed to the truck of the car, its proportionatety large aren and thort btruke pecuany aning tached to place. The diapliragmithas an eye-boleat to the brake craire, by whenction conimme pipps between the cars, ant,ber suction buse is nsed tach piece of honse bemt pronided with a coupling of pecular constructinn. also an invention of Mr. Eame Tonsequently an sing conping are exactly alike, an any other one. The coupling is provided with a valve which closes automatically in case of the separation of the train, thus making such portion of the traill as may be still attached to the lucomotive as fully und er coatrol of the engineer as before the separation. The first railruad fitted with the Eames brake was the Callac Lima, and Oroya, of Peru, S. A, which crusser the And
grate at an an elevation of 15,645 feet ahove the sear. The grale averages nearly $31 / 2$ feet in every huadred, wad in
nome places is $41 / 2$ feet. The requirements of a train Nome places is $41 /$ feet. The requirements of a train
brake $w$-re therefore very severe. The Eames brake brake w.re therefure very severe. The Eampes brake
was applied on this road in 1876, and has since beed constantly in use there. At a trial made on that roat in August, 1876. a train consisting of locomotive, tender, aod three cars, moving down a grade of four feet in a hundred, at the rate of 20 miles per honr, wa stopped in 17 eeconds' tims and 350 teet disrance after the brakes were npplied. The elevat-d raifruad of New Yurk city are entirely equinped with the Eames brake, it hiving been found to best answer the requirements. The service is very severe, the number of stops made by all the engines in a munth aggregat
ing over ove and a quarter nillion. The Eames Ltake ing over ove and a quarter nillion. The Eames btake
is also in use nuon over 50 wther railroads in the United is also in use upon over 50 whther railroade in the United

Abibama Claims, (The.) (Am. Hivt.) Under Ins title, an internathonal dispute id valving questiun of the glavest ponitical importance sprung into exist this country and Great Britain; and remaioed as annce of growng irritation until 1852 , in which yea it was sutifactorily set at rest lyy the decisiou of arbitrators assembled in confercnce nt Geneva, as wili bseen later on. The name "Alabama" was ndopted to denominate certain claius advanced by the U. \&. Fovt ajainst Great Britain, tor indemnidication of American itizens for marine losses eaused by Confederate cruis ers durng the war nfuresaid, several of which wert
bnitt and equipped in Enyland, including the noterious privateer mitted by the latter upon American commerce havin been the most seriuns in extent, her name became a cordingly attached to the issues which had arises on of the proceedings of herself and consorts. The "Ala ema was a screw stetu-sloop of 1 , (40 tonis Fegister Contederate privt Lard of Birkomhead, Eng, for tre mure tor specd than darability, she was hark-rigged fitted with two ensines of siou horso-puwer cach, nud pioreal firl 12 kanis, having beaded currying capmeity ivo of her eqiargans annimples. At the time of her hannching she had not heen clariotcned, (hein khown as 2.0 , the huhure number, heither was lit del hy the U. S. reprewnatives in England. In Jone
 ounly coumunded the "Sututer," a viskil condemnedn Qibratar as unemworthy.-arrived to take clarge ; and on the 3nat July, thespite an effort male by the Anerican mivineter to derain her. the "Alabama phe to sent. A fhere whe foined by Capt. Semmes and his ufficers, th formur of whon there produced his comunimethe, gave
 by mrans of n whip from lomdon, which alwo joine leer there, her armanent, munitiens of war, and sthres,
together with a supply of coul. Her crew consisted of

80 men, all told, and her armament of eight 32 -ponnders. Proceeding to sea again, the "Alahama" made her first capture on sept. jth, and within the space of Anuerimy following, had destroyed quite a number of coal, to make of New York harhor a croveing want of Scames next exploit was the overhauling of the mail steaber "Ariel," plying between Aspinwall and New York wh which pecasion he captured a number of E s ofticers on thard, along with 140 mariners. Relleating the "Ariel" alter exacting a heavy bond from her, pas ahle on the conchusin of the mar, the "Alabama, on and sunk the C. S. punlwat " Hatteras." After captur ing in ill 65 vessels, and destroying American prop erty to the estimated amount of $\approx t$, voon,000, she ermised in the baian Ocean, atad returned thence to Eumpe where, on lune 11, 1:64, she entered the French por of Cherbomrg, in order to refit. While lymg there, the U. S. war-steamer "Kcarsarge. Capt. Winsluw. nitude her appearance, upon which the "Alamma" challenged her to an action in the roads. The "Kearsarge " overmatched her adversary in respect of crew, armament, speed, und general fyng covaino on the luth, th prote sed amet, meceed, which, after the lapse of an humr, inded in minking of the "Alabama"py her antagonist, her oficers aud crew being rescned from drowning in part by the boats of the "Kearsarge," and the rest by so Eng lish yacht which had witnesed the whole affir. Amon the latter was Captaid Semmes bimself, the Englis yachtshan refusing to deliver up these whom he had saved, and whom he hastened to place under yentral protection: "The eareer of the "Alabana, and of the "Flonda, shensudiah, and other vessels, built and equipped in Eugland, had the effect of almost atmini lating the mercantile marime the e. Salee, what by to bottoms nuler furgign the miums of insurauce denumded on war-risks, that cout try' and the feeling of irritation ogainst Great Brituin for having aflurded such succors to the Sonth, necordingly became deep and miversal, Then followed a dapo i.h anc, imfoductory to negotiations entered int and susulting in the claims prelerrea by the forner ninister at st. James', LIon. Reverdy Jubuson, for the adjustment of outstanding differences. This trinty however, proved entirely unsatisfactory to the povt. of the U. States, and it was mitimately rejected by the in ahey Commissiun, composed of an equml pumbier of number representiny the two comatries nt issue, met nt Wash inston, with the object of agreetidg upon and establishing a basis for the compicte rdjustment of theso international differences. On the sth of May following, a trenty was signed, by the tenor of which Eng land admitted her liability to a certain extent, leaving only the amome of damages to lee arrived nt, and which it was agreed to refer tor settement to arbitr turs respectively appointed hy the hrazilian, Italian, Swiss, American. and British guwernmente, their nward to be binal. Accordidgly, this court of arbitration cimitimed its sussing with oereioml intermis, ane unt Septembler, on the lith of which month the Trimun of Aluition pullished ito award, an nhstract of which is is follows

## SUPPLEMENT.

Allovs of zivc.
The presence of zine always gives increased hardness to the matids with which it is combined. It is an imits oxidation is very rapid, facts which reader the making of alloys of zinc very difficult. With iron it formas an alloy very difficult of manufacture, one metal being volatile and the other very refractory. With gold it forms alloys of a greenish-yellow, very irittle, and susceptihle of taking a high polish. With copper it furms very important alloys; it whitens the color of the copper, forming an alloy which has a fine golden yellow, much used for the manufacture of imitation gold jewelry. With a larger proportiou of zine the color becomes yellowish-green, nad lazses to a grayish blue when its proportions are more than hatt of the
alloy. These alloys are all more fusible, harder, sind less oxidizable thays copper. Those which contsio a third of their weight of zinc are very malleable and ductile at ordinary tumperatures, but become very brittle at a slight degree of heat, With silver zinc combines easily; it is a brittle, bluish-white alloy, not employed in the arts. With lead it produces a metal somewhat hard, and capitble of taking th fine polish without diminishing its malleathity; the alloy is also more thugh than head, amm its sp. gr. is grater thatu the mean of the two metals. With tim it forms a metal remarkable for its great hasdoess aul fusubility. With mercury it forms a white, very brittle metal. - It is not aquity contaio zinc, which daes nut appear of high haeen koowa as a metal before $1: 80$ appear to hav Magnus speaks of zioc as a semi-metul, and calleil the alloy of copper and zinc golden marcasite ; or rather perhaps, lee means to apply that mme to zinc from its power of imparting a golded color to copper. The probability is, that calamine was known from the earliest times as a peculiar tarth, althongh it was not thought to be an ore of zinc or of auy other metal.

Irrespective of the above are the following territories, claimed as belonging to the $A, R$. and coming nuder her jurisdiction, viz.:

## 

The most remarkahle features of the present atate of the country, as sluwn by the foregoing table, are the os it extent of the Indian thing a tract of liand stretchaze frota the suathern part of the province of Santa F'e, into that ot Curdova, and lividing the Indians of the Chateo from thuse of the Pampas, the dominions of the Indana may be said thextend oser all the plains of Patigonia, the central jarts of the Pampas, and throngh the Chaco into the territories of Paragasy and Bolivia. The civilized districts of the west and borth-went have aow estallished meams of communication with those of the east, except through the district jnet mentioned. the Centrin Argentine haiway the chier ferself. Int tive, is rapid on both sides of the liue of ralway has been slmost incegsant. To the north of Belleville, the land lying between the cities of sauta Fé and Corrloza is how lying peopled by families of Swiss, German, Yrench, Italasn, English, and Americans, who are pncunraged by liberal graute of land and assistance frum the Provisional Government of sabta ke; and they appeur to be gradnally establishing themselves. The conitisation of the grape and wine making, isassmming large proportione, and the exports of wine are rapidty increasing:
Commercuit hut s. with inerce of the U. S. With the $A$. Republic for the of previons yeur The inputs amonnted to $8: 3,794876$ previnst के 553,587 in 1878 , while the exports to the U.S. in 1879 were $\$ 3.791,293$, agninst $\$ 2,5+7,187$ in 187 h It manst be stated, however, that the increase in the smonnt of imports from the U. S. Wus confinell in great part to raw materials and a fow olyecte of prime nece sity for which the C.S. is amost the exclusive marke such as kerosme, atewhol, atatcht, fommer, tobaceo, \&c There was a very small increase to the imports of drages, azricaltural implements, hapware, furniture pante, euthon fubrice, \&c, but there une an actua decruase in plows, groceries, coal, ami hardware, whit in hundreds of otiaer items thrree was no tade wh The greas to the conutries of Europe. The tutal valie of cotton fillicice, for inetance. was $\$ 5,21: i, 8 i z^{2}$, of which the U. S. only contributeni, \$115, itit, while the contrihation from Engtand nmonnted to $\$ 3,1 \times 8,051$. Arize'tis. The census retarns of $1 \times 70$ give the fellow ing exhbtht of etatistical informathou rugarding the then 川gricultural, industrial, and fingucial position of this Territory, ath which aro here prominced seriatim:
 800, of whinh $1+, 685$ were improved intids midd the hat under cultivation $\$ 161,3 \nmid 1$, exchunive ot farmang-tuplements and namhinery valued at $\$ 40,105$; minount of
wages paid for husbandry, 104,620 : total value of farm productions $\$ 274,998$, of uarket-gardeos $\$ 2,850$, and of live-stuck on farms, $\$ 14,, 94 t$. Of the last-named there were enumerated 335 horses, 401 minles and abses, 938 milch cows, 50i working oxen, $3,60 \%$ head of other cattle, 803 sheep, and i 29 swine. The out-turn of farm-
ing produce gave tbe following result of the chiel items

Iuro'ra Borealis. (Myterr.) The vexed question Wether appearances of the Aurora Burcalis are really erur wemplanied by any lond ousp seems to hate beeb 1850. star M. Panl forlier, the aeronatat, Wion in Dect 18i0. started from Paris in a labluon, and descended, after fuarteen hours, in Nurway, wh Hobnt fua, at an
elevation of $4,060 \mathrm{ft}$. $\Pi_{\mathrm{i}}-5 \mathrm{y}$ s that he saw through a elevation of $4,000 \mathrm{ft}$. In- 5 sys that he "saw through a
veil of mist the brilliant rays of an Aurora Borealis, veil of mist the brilliant ritys of an Aurora Borealis,
epreading all over its stramge limht. Smin atter an incompruheasible aanl lond roaring was lieard, which, when it ceased completely, was followed by a strong smell of sulphor almost suffocating." M. Beequerel read at me of the lant meeting of the Academy of Sciences of Patis a paper on the Celestial Origin of At nuspheric Electricity, and he conchuded ly stating that the anroras rusult from distharges of this electricity, and thas M. Becquerel exphans the roaring, more or Scientific merr by the dinablame soronds. The pecaliar eflects of the $A, B$, have recently beer produced by Prof Lemstron, in Lapland, at an elebero produced by Prof. Lemstron, in Lapland, at all eleLon. 25017, E, of Gremwich, by an tlectrical contrivance, and the true anroral line in the spectram was distingnished. Prof. $L_{\text {. concludes that the height of }}$ the aurora has been gepelally greatiy overestimated. Ansirla (contintud from p. 188). A treaty of peace was sigord at Vienna (Oct. 30, 1863), by which Dentuark maik wer Schlewig, Holstein, and Lanenborg to A and Pruseia. But $A$. Apeedily suffered terrilte retribution for the part she had takeo in this affar. By ithducing Anstria to join with hr-r, Prussia succeaded io removine part of the calimm of the procesting from herself, and she ulso succeuden in obtaining the aid of a
rival power to secure territories which she had pre rival power to sedre territories which she had pre-
viously determined to npuropriate as her own desirou- of the formation of the durhies into a sepurate state, euppurted the claims of the duke of Angusteta burg to them. This was stremonsly opposed by lerneein, whu regarded the pablic meetiogs that were permifted to be helif in Hulstein io enpport of this as a
lreath of arrement. A. referted the question to the lureach of agreement. A. referred the question tor the
Franklort diet, which derided in faver of the duke. Franklort diet, which derided in favor of the duke.
Prossat, which lad iong lowked with jealonsy upon the Prassa, which had iong lowked with jealonsy upon the power of $A_{\text {, and }}$ conedidered a war with that country
fur the sopremacy of Germany as somory or later n necessity. entered into an alliance with Vietor kimmane (March $2 \%$ th, 1866 ), the latter undertaking to declare ties, while the former engaged to serure Venetur for her It.aian ally $A$, wis in an unprepared state when the war actually broke ont, lant the Prossiag forces, on the other hatul, ware thotonghly equpped, On Jane 16 th three Prussimn armics enterd Suxony and then Bobe-
 Poblol, atill on the fullowing days the Anstrians, baiker command of General Brhedek, were defeated in varimue engagements, with it total loss of 20,000 to $w 0,060$ nien. On June 30 the king of Prassia jouted the momy, and fonght and lost hy the Austrians on July 3d. (See Sadow .) The archiuke Alliert, who han the command of the anmy in Itaiy, with which he lad inflicted at to take the chiet crmamand in place of Benedek; hat the
emperor of $A$, beting the disastrons state of his affaire, claimed the osediation of the emperor Najoleon. throngh whon an armistice was agreed upnn, Juy 22. A treaty of peate was sipthed at Prague, A Dg. 22d, by nhich $A$. gave up to the dingam of Itaty lenetim and
the fortenses of the quadrilateral, namely, Peschiera, Mantur. Veroroa, and Legnatu; recognized the dissoln tiun of the lite Gernato Confederntion and crosented to a new formation of (fermany, it wlifh slie shoold hav no part : give up all clain to the dochies of holatei 40,000,000 thaters, less $20,060,006$ allowed her onaccount of the duchies. Having thos olitmined puce, the emperur now tmined hio attention to home affairs, his first effort beiug to conciliate IImary, which was still in a very troublid and dissatisfied state. At the one ing of the diet on Nuv. 19, 1866, an unperial rescript, signed by the emperor, was read, is whels he promised to do justice to the claim of Hnngary for self-governnient so far us it would not affect the unity of the empire and the position of $A$. As a great European power; on Jube 8 , 1067 , the enpurar atod empress were
crowned king and queen of Humary at Yesth. On Hay 2 in, 1868 , marriage wits made a ciril contract: and on July 30,1870 , the cuncurdat with Botme was declared to he sispended in consequrnee of the promblgation of the doctrige of Punal intalliblu!, and it was abulished in 1874 , measares heing at the singe time adopted for restricting the !nwers of the clergy. In 18i3 an International exhminion was helo at himna. (Seep. 7TE, art. Centensial Ex.) In 1878, by the treaty of Berlia (p. 297) the govermmeot of Bosnia and Ilerzegovina was confided to $A$. On July 31 of that year, the Austriun troops crossed the Heizegovinian frontier, and the Dews robsed the Mahomedag fanatics to desperate efforte; hin thin and the uccupution was completed lufore the end of the yoar. Thesultanstill rewaios sovereiga de jure, nor has $A$, as yet been able to regulate the syrarian difficulty which lies at the root of all the evile that have affilicted these provinces.-A rchaduke Rudolf is the only sog and heir-appareot; D. A og. 21, 1858.
Averill. Willam W., ( $a^{\prime}$ eur-il.) an Americad general, B. in N. Y. state, kradnated from West Point in I\&53, and in 1862 was aypuinted brigadier-generat of volunteers, in which capacity he led a famons radid into s.l. Virginia, Dec. 1Mit. during which he intlicted serioue
lows upon the Cuofedetorte base of splpplies at Salem. A verill. in Wixt Jirginta, a tum uship of deflerson co
 law isserts that eymal volumes of different gases, at the same pressureand teaperature, contain an equal num-
ler of molecules. It was proponuled by Signur A vo gadro, whate name is also well known in connection with experiments on the tension of the vapur of mercury. Quite recently, Professor Numana lias dedaced the law mathomaticany from the hirst principles of the mechanical theory of gases. (See Berichice der Dendschea Chemischen Grscllschuff sw Berlin, p. 690, 1869.)

Axle, (Mech.) A commanaication was recently made to the British Ansociation upon a method for shaping rail-
wny nxles ly rolling preseure instead of by hammering why nxes resnlt luing necomplished in two minutes instead of half an hour, as required by the nsual method, the axle at the same time being not only superior in qual ity, but nore uniform in size, and of course capmble of being produced thore chenply. The machine consists of thrve rollers, regulated noas gradually to press more closely together, thas reducing the dian-ter of the bar, and extending its length until shaped to the size re quired. Axles of any length ean be rolled in this manner with collars at any part. The rollers are geared to revolve in all the satue direction. their friction imparting motion to the axle. It was thonght ly the would tend to obviate those faws in axies which so frequently caum divasters ou railways.

Baby yon. (Anc. Geng.) The chief city of Babylonia, $q$ ere tuwn of Hillal ward foundation is described uoder the word Babel. With this coinciled many ancient traditions, while some speak of Sumirams as the foonder, and others of Nebu
chanduezzar. Thuse acconats may all be recouciled by supposing that Somirnmis rebuili the ancient eity, and that Nebnchadnezzar atterwards greatly edlarged now mont eclelirated city of Asoyria. The kiogs of the country made it their resideace atier the destruction of Ninevel The city, sit onted io a great phath, was of a square torm, each side 120 stadia in leogth, which makes the circuit 450 stadial. It was so maghificent that noee could be compared with it. It was, morcover. encompissed with a wide ditch, deep, and full of water. Besides this there was a wal, 50 royal enbits thick, aud 200 high As soon as the earth was dug ont to forms the ditch, it was matue hital oricks, whath were bornt in furand at every thinty layers of bricksa layer of reeds was placed. The sides of the ditch werc first built io this manner, and then the walls above them; and upon the edges of the wall they erected buildings, with only one clumber. etach opposite the other, letween which there was space enoogh left for a chariot with four borses In the wall there wera n huntred gutes made of brass, as well as the jamlis aod lintels. The Eupluates runs through the city, and divides it into two parts. Bach wall torms ao elbow, or nngle on the river, at which point a Wall of baked brichs commences, and the two built of three aul furretorics. Thestrects werestraight and intersectel by whers which opened on the river Opposite the eud of the streets small gates of limess were formed in the walls which lined the river. By these gates there was a descent to the river, and there were as nany gates as thore were transverse streets. The external wall served for defence; there was also an interval wall which was nut less strong, but natrower. B. was taken by Tiglath-Pileser I., of Ascy ria, about a c. 1110 , and by Cymus, ahoot b. c. 550 ( 535 , accotsing to the bust authoritios), During the present ceatury, many enterpriaing travellers, suong whom any lee mentioned Rich, Ker, Porter. Solicitor-General. He now had his share of the profeso creasing wealth ly ularrying a rich city beireas. His creasing wealth ly ulartying a rich city beiress. His
next work, The Wudom of the Aacients, was published ia 1619 . In $1 \mathrm{il}, \mathrm{s}$, he became Attorney-dieneral, ad on the 7th of March, 1617, he was mate Lord keeper of the Great seal. Notwithstanding frequent differeaces with the king and the court patty, $b$, continued to advace, and on the tth Jaa., 1618 , he achieved the summit
of his andition in beiag appolnted Lord High Chancelof his ambition in beiag appointed Lord High Chancel-
lor of England. On the 11tis July, ia the same year, he lor of Englaud. On the 1lth July, ia the sume year, he
took hisseat anong the peers as Lord Bacon of Veralam, took his seat anong the peers as Lord Bacon of Veralam, and was further created, in 1621 , Viscount st. Absan's.
In the year 1620 he produced the masterpiece of his In the year 1620 he proluced the masterpiece of his natured govine the Nowm Octumu, a remarkable
work on which be had labored for many years. $B$. s glury had now culminated; his career leacetorward became tarnished with infany. He was accased, before the llouse of Lords, of having recenved arouey for grants
of offices and privileges mader the scal of State. He was unible to justify hiuself, aud desiring to avoil the mortific.tion of a trial, confossel his misdemetnors, and
threw nimself on the mercy of the peers, lesechiag threw himself on the mercy of the peers, beseechiag
them to limit his pumslunent to the loss of the high them to limit his pumishonent to the loss of the high
office which he had dishooored. Atter he had, ly an exoffice which he had dishooored. Atter he had, ly an ex-
plicit coofession, acknowledged the troth of almost all plicit coofessioa, acknowledged the troth of aimost all the charges broaght against han, intercession of the king, and the which they themselves took in one of their laoot distiagnished men berd, the Lords seateoced him to pay a fine of ef 40,000
(an eaoranous sum in those days), inal to lue imprisonud in the Tower of Loedon daring the roy. 1 pleasure. He Was also declured forever iacapable of place or eopluy-
meot, and forbidden to sit in Parliament or th meot, and forbidden to sit in Parliamout or to appear
within the verge of the court. This severe seatence was donbthess justge of the court. be alluwed, that he was actuated oeither hy warice mor corrmption of heart, but that his errurs are rather to beattributed to a Weaksess
of chatacter, which wats abard by others. Trats of of chatacter, which was abased by others. Trats of
geaerosity and independeoce, which his lifealso displays, gearosityand independeoce, which his lifealso dispatys,
ghow clearly that he knew and valuad virtue. He was unfitithral to it becanse be bad not sulficient firmuess to refuse the unjust detaands of others. le was conta
for a short time in the Tower, and then discharited. Hu for a sloort time in the cower, anl then discharged. He tence, io so far as it relited to his admittance to the coart. H. W.Ls summoned to attend I'arliament before he ticd; but the remainder of his days were speot chiefly in scieatific pursuits, and the suclety of the
friends which adversity had leit him. Such jursuits were his consolation, and at last cansed his death. The f.ther of experiment,1 philosop hy was the murtyr of no experiment. Ont driving, he purchased a fowl, staffed it with snow to see if it would act as an autseptic. This exprosare produced bronchitis, uad he diedApr. 9,1626 , in
this Gitin year. In fis will were the words, "For my name and meruory, I leure it to men's churitable speeches, to foreign nutions, and the next ages." The accomplish ter displayed the phenomenon of great originality com bined with a most extensive range of acquirement IIe was a poet and an orator, a lawyer aod a stitesman. In the philosophy of experiment and of ubservation he was pre-emineat. The metaphysical and the physicat Were both coagenial to his genins. His great merit as-
donbtedly consists in the systematic method which he laid down for prasecnting phitosoplical investigation and has services in this dipartment cannot easily be overrated. At the present day, those especiully who
busy themselyes with playsical pursnits would often d well to reenr to the sivere and rigoroas principtes of the Organon. The mind of $B$. Was poeticat; lhis works ridiculed all his pretical pretensions, becanse in his yer sion of the Psalms he says that "man's lite bataga ou brittle pias," and spraks of

That makes the seas lo areth hise bouling pan."
Still we find in $B$.'s verves many vigorons lines, and some patarges of great beatuty. The merito of $B$. ns in urator,

The term was subsequently applied to other rebels. - See

Bag'alad, an important province, pashalic, or eyalet of Turkey in Asia, of triangular form, stretching N. W from the bottom of the Persian Gulf in about $30^{\circ}$ to $38^{\circ}$
N . Lat, and lying between $40^{\circ}$ and $48^{\circ}$ E. Lou., having W. and S. the Fuplırates and the Arakian desert; E Kuzistin, Monnt Zagros, and the Persian prov. of Azerijjan; N.W., the pasbalic of Diarlekr; and on the Julamerik. This immense tract extends over an ares of Juout $100,100 \mathrm{sq}$. B . and comprises the whole of the an cient Buthylmit and Chaldea, and the crenter part of Assyria $l^{2}$ roper and Susiona. Except where it is bonnded on the W. Ly the Luphrates, the province is traversed in its whole extent by this great river and its rival the Tygris, and some smaller rivers. It is naturally divided into 3 purtions, viz: 1st. The conntry betwren the Aralian descrt and the Euphrates; 2d, that between the
hatter and the Tigris, the Mesopntamia of the Ancients; latter and the Tigris, the Mesopotamia of the Ancients;
and, 3 d , the conntry to the E of the Tigris. That purand, 3 d , the conntry to the E of the Tigris.
tion of Mesopotamia S . of the city of Bagdad is now called Iruk Arubi, and that to the N. of Bagdad, Alge zirat, or the island. The soil and aspect of the country differ widely in different parts. The tract lying between the two great rivers, one of the richest, hest curtivated in mist jarts, an absolute desert. The banks of the Eaphrates and Tigris, once so prolific, are now for the greater part covered with impenctrable brushwood, whil nuw destitu, once irrigated by ionumerable canats, is climate is hot but col inhablants or vegi-tation. The prevalent. It wonld he ensy, were the government less proverbial for imbecility and ignorance, to restore to this country some portion of its ancient proxprity. Few
regions are libest with a finer soil, or are cajahle of being cultivatel with lens lalor. Excellent crops of cereals are raised; and tobacco, cotton, hemp, and flax are also cuitivated; dates, especially, are an olject of much nttention, their excellence appronching the quality of the Arabian fruit. The monntains in the E. and N. are covered with vast forests of oaks which produce the besi gall-mits brousht from the East. Wild abimals nre
cotmmon, and game and poultry ahound. The present population consiste of Turks, Arabs, Kurds, T'urcomans, Armenianm, hid Jews, and peobathy mumber in the ag gregrer urout 1.3mo,goo. B. is only nominally entject ti the Prirte; the intirior haing governed hy semi-ithepen dent Arahand Kurdikh sheiks who frequently wage interSultan, aud are lumad to tarnish the fashu with a contingent of troops when nemded.

this kitud of writing is to be found in the witty era of Euglish genius, which we take to be comprehended hetween the beginoing of Charles II:s reign. und the times of Swift and Prior. Since that foriond, the genius of the age has chindy been characterized by the correct, elegant, and tender: nud a renl or affected taste for beantiml simplicity has alnost universally pre vailed. Andrew Fletcher, of Saltonn, suill. if he were per mitted to make the ballade of a nation. he cared not who should make the laws, ("Pultical Wiorks," 1it9:) so strong a lelief had he in the revolutionizing tendency of on heroic ballad or song. Togive ao instance of the truth of this remark, we need only mention how the popplar. assisted to bring abont the English Revolation of I6ss. It is generally allowed amoog well-read mwa that the best specimens knewn of the old pupular ballads art to be fonnd in Scotland, or more properiy, perhups, on the Scottish border between Scotlind und Eugland. Tho earliest ballad now remnining in the Euglish lunguage is believed to he a "Cuckoo Sung" of tha latter part of the reign of IIcmry III. The song speaks for itself, al though we give a molernized version.

Sumer is icumen ith,
Lhude sing ctecu.
Groweth sed and bloweth me
And spriayth the wide $n$
Sing cuech.
Ane beth th after lams,
Bulluc nterteth,
Butuc nerteth,
Hucke verteth.
Wurie sing ctucen :
Summer is enming In,
Loud ninga cuckon:

Wet sugges thu cuccu.
Ne suik thu mever nu.
The seed crows the mod hlows, Sing cuckoo.
Fwe bleats ufter Fime bleats after lawh,
The call low a stet cow,
The bullock starts, the juck Hell sing'st thou, cuckm,
Mayal thau herer cense.

the a pisen luight in the atmaxplare A globe of nir,

for mim-riect prepan atum) to bo about eix times lighter

than atmospheric air : consequently, 5 -6ths of its whole buoyant force will act in impelling it upwards: that is to say, the force with which a sphere of such gas, one be $\frac{5}{6} \times \frac{1}{2}=\frac{1}{30}$ of a pouvd avoindupois. The ascensiooal furces of different spheres will be proportional to their magnitudes, that is, to the cobe of their diameters therefore a sphere 12 feet in unameter would rise with it force of a $8 \times 5=-456$ ponods. But these determioution a most le diminishel by the weight of the envelope The must be diminishen by the weight of the envelope. The silk varnished with elastic gum, or lndia-rublier. The quantity of this material required to cover a glole one quantity of thas material required to cover a giowe Soe for a glebe of a greater size, the quantity reyuired will increase with the square of the diameter; hence the coveriug of a halloes 12 feet in diameter must weigh atront 7 pounds, and of one $2 t$ feot in diameter, ts pumbis. It follows, therelire, thit a balluon of 12 feet in diameter will enly raise frotn the gromad a weight of 50 ponads anit one of $2+$ feet, +28 pounds. Computiner in the same
manner, it is found that a lallona 60 feet io dianeter wonld raise a weight equal to about 6,950 pomads; and that one of a foot and a half would barely float, the whight of the lar beine just equal to that of the imWelght of the bag being just equal to that of the im-
prisuned gas. - The beifht to which a balloon will vise prisumed gas. - The begight to which a bathoon will risa sity of the atmospheric strata liminishes as the distance from the esurth is increased. The banoyant force diminfishes with the density: and when it is rednced to a quantity only equal to the weight of the batloon and its appendages, bo further avecusion can take place. Anotber circumstance also confines the possible elevation within moderaty limits. As the prcssure of the external air is diminished, the expansive force of the confined gas becomes grenter, and would ultimately overconie the made. A halloon quite fill od at thi" surffice of the earth would inevitably be torn to shreds at the height of a fow miles in the ammospherg, unless a portion of the gas wore allowed to escape. Fur this purjose the bathou is furnished with a safety-valve, which can be opened and shnt at pleasure: but. i, prevent monecessary wiste of gas, it ought to be made of such a size that it requires only to be partly filled. A ballonn half filled at the surfawe of the carth would become fully distended at the
height of $31 / 2$ miles.- We have hitherte spoken only of height of $31 / 2$ miles.- We have hitherto spoken only of batluons filed with bydrogen gas: lut it is evident that any other substance specifiually lightir than air would answer the purpose; inf fart, the first batlouns by which with hydrogen, but simply with rarefied air, the rarefac tion beiner produced by kindliner a fire under them; and as they thus becane filled with sumke, they were called smokeballons. The assensional force, however, which can be gatined in this way, is not great: besides, the purpose of maintaining the fire, which adds sensibly to the weight to be raised. - The two French brothers Jontgolfier liad the honor of hist preparing and send-
ing up a $B$. into the air. After one or two previous

their seats in the basket of a smoke-lialloon; and after rising to an elevathou of upwards of 3,011 feet, descended
in satety to the earth. The next ascent was made by MM. Cbarles and Robert in a B. filled with bydrogen gas, on the first of Jan., 1784. After a flight of an hour and a half, they alighted on the oreadow of Nesle, about 25 m . from Paris, withont the slightest accident. B. became then quite a rage, so thit, from the cemmencement of the yesrlit Equipe was literally corered with them. In 1785 , Dr. Putain crossed from Dublin to England; and the celebrated Blanchard, who made 36 successful voyages, passmi from England to France, accompanied by Dr. Jeffies, an American pbysiciath, the voyage being performed in less thath three henrs. This visit led to the tragic death of Palatre de Rozier. Wishiog to return the compliment of Blanchatd's trij, Rezier, with a companion
 reached theint of 3,000 tieet the whole touk firs anil the voyarars were dushed puon the rocks nur Bunlogne anil killed, This calamitons accurrence, howerer did not ham, the courure of akirumuts. It was obvions that it h.d lnen necusioned by the want of proper precantions: accorlingly, ascents cuntinued to be multiplied, and h.ty since become so common as to be an orimary specthele in the pribeipal cities of the Old and New Worlds -Whon $B$. brat began tu be constructeal, it was expected that they would be found applicable to many important phripusers. These expretations have bech risappointed or control their conses: the only power the aeremant po certain limits. In sume instances they bave lien sue cessenlly uned for military recounoissuces, first ly Geberal Jouriao, in 179t; afterwards by Napeleon 111 . in the Italian war; and latterly by our own national army When in use, the $B$. is kept nuder control liy strong cords. Interesting ascents were nade by Biot and GayLussac in Aug. 1844, with a view to make meteorological obsorvations in the upper strata of the atmosphere; (see Atunspueae.) Excepting these and those nade, also for
 Flammarion, and their use of $B$. during the siege of Paris
in $1870-711$ for kecping up conmunication between the besieged city and the external world, and those made by besiegetine, Gifford and a few others, (See Aamonautics, p. 1:9), the punerons ascents untertaken down to the present time, have served but little purpuse than to gratify applied electricity is a sunrce of propelling power. He first nsed storage batteries, hut subsequently employed a battery of cells, arrangel in series, actiug upon a sie-
mens' electric motur. The propellor used was 9 ft . diameter, placed in the rear of the cage. The resilt Was a partial succesio. Inspired by these resnlts, DIM Renard and Krelis, officers of the French Army, com nenced a series of experiments their balloon was
cigar-shapel and their success in steering and propul-cigar-shapel and their shcecs iosteening and propnl-
sion was an alvance njon my result hitherto attained Bion was an $1 \times \times 4$, they attained a spemd of 15 miles at hour independent of the wint, which was blowing 5 miles an hour, and they retnrned to the sput where the departure was made, a success not hitherto accomplished

Patapsco river, 12 miles from the Chesape4ke Bay, 2 to mites from the occan. Lat. $39^{\circ} 19^{\prime} \mathrm{N}$.; Long. $75^{\circ} \mathrm{If}^{\prime} \mathrm{W}$. Baltimore is fortunately sitmated on a soccession or bills that rise fandike from the latapoco, giving the city excellent dranase in alddition to a picturesque appratance. The harlor of Baltimore is sufe and capacions, with allealpenched by a ship-chanoel from the bsay, 150 fret uide, with a uniform depth of 24 feet at low tide, and is defended by Fort Mr-Henry. The railroal connections of Baltimore, hy neans of the Northern Central, a branef of the Peonystvania R....., he Raltimore and Potomac, the Philadelphia, Wilmingtin and Baltimore, the Western Maryland, and the Baltimore and Ohio, wive it a commanding position in regurd to a very extensive lnck conntry. There are two lines to Richwond, two to Wha ington, two to Philadelphia, nnd two to the
1500 miles nearer Chicalo than Now York is ; 210 niles nearer St. Louis; 240 miles nearer Lonisville; 240 nileed nearer Cincindati; 104 miles nearer Pittshurg. It ia
nearer to Harrisburg than Philadelyhia is, and the great valleys of Pennsylvinia, of Virginia and Temessoce are naturally trilutary to it. These circumstances, takes in consectioa with the recent construction of four great elevators, piers, petroleum wharves, and other unsur-
passed terninal facilities, have contrilunted very largely to increase the commercial importance of Baltimore. In 1876 the arrivals at the port were 1254 vessels, including 93 steamships, 91 ships, and 867 barks; the elparances
being l343, including 96 steamshiys, 05 shiys, 829 barks.

Fig. 2i8. - battle monement.
The coast wise tonnage exeerds 2,000,000. Bandage, (band'aje.) $n$. $[\mathrm{Fr}$.$] (Surg.) Any fillet, roller,$ or swath otinen, cotten, or flankel, used for sopporting edges of a wound. The use of a bandage is to compress bloon-vensels, correct deformities, upite woundr. . .e.eptractured bones in their proper situation, se. A himage,
whatever material it may be made, shonld be stronk, and of sufficient elatieity to enpport the parts to which it is apphed, withuut hecoming relaxed or loose; and sufficiently supple and solt to fold with ense and neatoers, and yrt yield without relaxation to the nutural expan-
simm of the limb, A handage should be withoot seam or selfion of the limb, Ahandage shond be wincot seam or selvage, and have smooth, uaravelled edges. $B$. are nivided into simple and componad. A simple B. is a long, narfrum three to tive yurds andnf a width from 2 to 6 inches A compound $B$ is that which hus one 4 wo or more picces sewn fogct ther. the most serviceable and frequeotly used is called the $T$ tandaze, and is conposed of one horizontat linih, and a perpeadicnlar one meeting it in the ceatre. where it is joined by a few stitches, forming afigure rudely resenbling a T. We will describe the peculiarities and modes of application of the $B$. in most general domestic ose.-1. The single-headed moller, of inipn, which, being rolled op from one end firmly, is denominated a roller: the rolled part heing called the head, and the louse cad the tail- To apply this bandage properly, the had of the roller is to be helt in the right hand, and only so much narolled as is necessury for the commencement of the application--In all cases of applying a baudage to
the leg, ( Pig. 292, A. ) or the arm, covering nust hegin eitherat the foot or the hand. so as to compress the whole limbalike. This fact must be lorne in mind while putting on the roller, for if unevenly appli-d, the part, when unswnthed, will appear in creasee of swollen and contracted ridges. Takiog the tail in the fingers of the left hand. and sprealing it across the fiost, and making a careffil
beginning ly passing the roller a few times over the top

sad under the hollow of the foot, making each fold, or is to be carved a thad the hee wind so the limh increases in size, the bandage must be mide to told back on itself lyy a donble of the cloth, the fimers of the cpposite hand beigg placed on the limh ut the point In this manner the handuge is to be carried up the limb, the roller being passed from hand to hand, as the sitnitoon of the part requires the chatnge. The tightest part of a handage should be at the commencement, with a gradual slackening as it proceeds. -The next most usefin upplication of this roller is as is Fig. 283, A, where it is to the for mymies to the eye or orbit, or for wounds boen mplis and a compres placed over all the the of the bumblage. $(b)$ is to lee spresad on the tomplo of of the bundigge (b) is to be spread on the temple of the templess, ubove the ears, but betwern each and the beat, for two or three turns; a fold is then to be immede in the lambage behind the ear of the unaffected side, amil there pinned to the previons circles. - The bundage $(a)$ is then to belironght obliquely down over the forebead, pasi the angle of the nost, atcoss the cheek nud compresm romin the limek of the head, over twonthirds of the previous obligue fold, and in the mame manner three conrets of the bandage are to be taken over the "ye or wonnd the firnt, ami, like thit, pinned to the landage helow. The first, ami, like thut, pinned to the laniage holow tomples und houd, the caul of the roller donthal under, and buitly fintomed on the foreheat with threm shall pins. - 2 . The upuble-fiectiled raller consists of is slip of muslin, whally rolled up from sither end to the centre in twathends. Its lengthdepradenion the purgue to whin it is to be put. - Fur clembent womade of the thigh or L-g. To stapport the muselos, and keep the parts in nepussition or comenetion, luthends of the hambagen are to he
 holow flan limb, and a lawd beld in wither hamd, the lanil-

before Chiriat, and every converted heathen was not oals trance into the pew religioe purified from thestains of his fornuer lifi. Fromy this $B$, of probelytes, however, that of St. Juhn differed, because he laptized Jews aiso, as a symbol of the necersity of perfect parification irom sio. Je Ans himself was baptized by John. Christ never laptized but directed lus disciples to adounister this rite to the converts, using the followior words: (oo yo, therefore, and teach all nations, baptizing them in the name of the Father, and of the Son, And of the Holy Ghist. ( Wutt. ג x viii I9.) In the time of the apostles, the furm of the $B$. was very sibulle. The person to be baptized w:is dipped in a athd to express mure fully his change of clamat tor pener and to express mure fully his change of charan tew. gener-
ally adopted now name. The Grech Churchintainel this custom; but the Western Charch adoptedi, in the leith ceutury, the mode of luptiom liy surinhlinge, which has been continned by the I'rotentauts, the Baptists ( $q, r$.) only excepted. The introdnction of thin mode of Lapitism was owing to the great incomvenionce which arose from the inmerfion of the whole budy in the northern climatus of Europe. The cu:tom of eprinkling thrice. in the administration of the rite, spread with the alifiusion of the dectrine of the. Trinity. In the first centaries of the Christian mera, whin, generally speaking, udults only joined the new sect, the converted (Cated humans, q. P.)
were diligently inotruet d: the power of this sucr:ment to procure perfect indion of sins sas tauelit and to procure perfect remission of sins was tamelat. and of sinfulness not yet removed, others did the same fiom the wish to gratify currupt desires a little li nger, noll to have their sins forgiven all at onee. But the doctrine of St. Aumustine, that the unbaptized were irrevocally drmeed, clanged this delay into husto, mat made the baptism of children gencral. The deuth of a mariyr, bowever, who perished while yet a catcchumen. was ac counted equally effectual for salsation will tuptism.
This was called boplisma sougminis, (huptirm of bloud.) This was called haptisma songminis, (huptiom of blud.)
When, in the 5th century, Clurintianity berme more When, in the 5 th century, Claristianity beame more firmily estalilished, and the fear of the relapse of Chrie oftem occurred in the period of peracation, diminied the baptism of childrea liccame still oiore general, and the baptism of chidrealiccame still oiore getieral, and ception of the Baptists. - As luaptism is a nacrament and considered ly the Catholics so very efficacions, the Roman Church has strictly prohibited the ru-haptism of baptized heretics, on their converaion to Catholicism. Anti-Trinitarians, only, are to be baytized again. I'rotestants, of course, acknowledge the valtuity of the bap tism of other Protestant secto, as well as of that of tho Catholic Cburch. The Roman und Greek Cathelies congecrate the water of buptism, but Protestants do not Fiven in the ancient church, every pursut, when bnptized, was attended by a Christina friend of the name sux,
whe became respoasille for the failh of the new Chisis tian, and promised to take care of his apiritual welfare, tian, and promised to take care of he porm still remains, though the promise is not yery strictly complied with in most cabes. After baptisn in the Catholic Church, the baptized parson receives mill and honey, as a symbel of his spiritatl yonth: and the spiritual privileges which he acquires us a Coristimare nil indicated thy sytmbols; thens the witt of wisdom i given, the garment of innocence is put ons. \&c. The Catholic Church acknowledges three Kinds of loptiom that of water, fire, and blood, (baptisma flumarmis flewinis, sawguinis.) The first is the common one: the second is perfert love of God, connect with enirer and ardent desire to be hapstized; the third is the marthroom of a catechmuen for The Runual Clurah ac throwledges, that all persons not baptizel are damuel, knowledges, that alt persons not anplizet ore dammed, fer; for even St. Aurustine, the sternest and sererosio preacher of this doctrinc, deemed it hard that thew who had not yet cinned should be danued for eternity it consequence of the side of Adam: mad he thinks that their suffering will be slight. Soene seholatic theohlogians have thought that the pais they were to endure wonl consist in separation from Gobl. The Juner triste ledieverd in the total damation of intants not baptized. BARO
about 28 ioches in height，the weight of mercury being abont 14 times greater tha that of water． 11 aving，as－ cordingly，procured a glass tube，of about 3 ft ．in length he filld it with mercury；and covering the opene end with the finger，he iommerged it in an open vesell rond－ taining ruercury．On lirmging the tube to the vertical pusation，adod removing the huger，the mercury instantly saok，leaving a vacuum at the thp of the thlue，and after making several oscillations，stind in the tule at the the vessel．On covering the wercury in the vessel with a portion of water，and rivising the tube fitt the lower ran out，and the witer rushel nu，to the tupuf the till This experimont，called alter its author the Torricellian experiment，demonstrated that the mercury wias sus－ taped in the tabe，and the water in the barr pomp，by exactly the same conatarpoise whet of the nature of it night be．Torricelli deed shortly alter，it the flower of his age，withont conpleting his great dis－ covery；but the fame of his caperionent was soon car－ attention of the onost euninent puilosoplaers ；aunong otbers the celebrated Pascal．Affer a varicty of mhe．
nious experimeuts on the sulgect．all of which toudofin nious experiments on the sulject．all of which $t$ endein th establish the presuare of the atmospbere，it at length
occurred to Pascal，that，If the mervurial columu was really supported by ntmuspheric pressure it hust he air，and consequently be diminisbed at coosiderable de－ vations．In order to verify this conjecture，he requested his brother－in－hw，Perier，to try the experiment un the $P^{2}$ uy de Döme，a lofty conical mountain．At the foot of the monotain，Perier filled two tubes，and observed the mercury io each to stand at precisely the estar beight，
pearly 28 English iocbes．Leaviog one of them ubder the care of a person to wateh its rise aud fall，he ca ried the other to the top of the ounntain：and on ri－ feating the experionent there，the fucrcury strou at the diaght of only estations in his descent．the mercury w：int alserve－ successiycly tu rise，and the fuot of the munntain it stood at exactly the same height in the tabe as at first． This experiment was inerisive；the result of it was con－ by similar observations made successively on the ground， and at the top of a glass－house，and the belfry of a church，proposed th：B3．as an instrumuth for oneasur－ of places above the surface of the earth．－The $B$ ．had been but a ehort time inveuted，before it wis obserred tbat the height of the mercurial columis is sulject
to variations conocted in some way wath the clanges of weather．But the variations are coufiand within a linuited ratuge，scarchly exceeding three inches in all，and dredths of ao iocb．It therefore wis cousidered desir－ able to render these minnte uscillations mare apparent， by iocreasing their ramge：and，accordlagly．of the nu－ beea suggested，the greater part have heen propused with a view to this purpose．The most remarkable or useful onnstructions are the following．the descriptions of which will be readily noderstood，with the assistance of the bilagrams：Fig．294，t，is the Cratern Baronteler，and is The tube must be about 34 inehns lous－When placed The tube must be about at ine his lous－ham betweed the two sarfaces，$m$ and $n$ ，just counterbalanees the pres－ ure of the air．The spuce above the mercary，a m，is， ＊apor of mercury．In this B．，as the dianeter of the cis－ tern is generally much greater than that of tho tode the variation of the upper surface at $m$ ．For，supposiug the section of the cisterin 20 times greater thin that of the tobe，aud that the height of the column，$m n$ ，suffero a diminution of one inch．it is evillent that，as all the mercory which goes out of the tube pusses into the cis－ portion as the section of the cistern exceeds that of tho tale．in the case supposed，therefore，the alteration of the level at $m$ will be 20 times greater than nt $n$ ；that is to say，there will be a fall of $20-21$ of an inch at $n t$ ，and

a rise of 1－21 of an inch at n．－Fig．294，2，is the Sinhom Burometer，which was also proposmd by Torricelli，as a tulue hormetically sealed at the upper enl，having the lower，or upen end，bent upwards th the form of a si－
phon．The variutions in this are otily half an great al
 to one ithed，Wull be miarked by a fall of ball ant thed at
 may，bowerer，be remedied by haviag the low er brawet blown intua wide lahti：lout ase it in wery stathelt to ph
 inacentracios．Fig．thit，is，is the Bhe el Burometer，propensed by II－rke．A sinall w efight thanta on the surlare of the by another woight，wonnected with the furiner by etring pussing over a pultey，p．When the mercury rine An indug ittachesl to the sxlo of the turns the julluy An ithlex metaclosl to the axle of the putley slow＇s a dhat，ther quantity of rivolution．This B，，thagh very the absolite luight of the mercomal columan，nor its variations，with sumbernt menracy to be of the shghtem uso fur any phans whical parpose ulatever．Exen as of the B3．－It has lued propesel to colargatherale，b itulinitg the upper part of the thite so as to form a con－

名 very difinalt to determine the＂xact phate of the top of scale．Thas chastructron is cosily concoived without a andam－－e shall notice tho ithur firme of the bn－
 siphou batomet－r，propined ly Gay－Ltwasic．It differ tube has loen fillow，the short losumect is letemetically lowed at the top，and the comomunication with the at－ mosphore takis phice throtigh a small capilhary hole，
drilled laterally throngh the tube at $o$ ，so fine，that， though it malmite the uir top puss freely，it preverat－th
 ofg appearatice of this $B$ ．，it has bero fomm，particnarly is trawellioe that a purtion of air will frequently if sinuate itself throgg the－mercury．In order to preveo the pessitulity of the wecident，an ingenious ruodifica－ tino has bern matle．It coosists in cansing the part of the tube to termitnte in a very fine point，nitd to pen－ etrate to some depth iuto the otler part，co，to which i is joined at $c$ ，is the mancer represented in Flg．24t， 5.
Now if an air－bublle from the end， 0 ，which communi－ entes with the atmouphori，should find its why through he bent capullary tube，it will pass alon？the sides of hae lulging part，uod instead of fenctrating to the acuum at $u_{4}$ will bot urvatol at $c$ ，whenere it is easily expelrd by rever－ing the Larometer，－Sime of the
coutrivances whels lotve beeo described for increasins the range of the oscillations，have heen fonad to susceed well io practice．It is fousd to le ibecidedly botter to npuly minnte divisions than to attempt to enlarge the scale；accurdingly，＂xperimenters now adtere to une or other of the tw，ancient foruss，the cistern barometer

## BARO

this is perbaps the least important of its applications, but the case is widely different at sea. - No certain rule
can be laid dowa for jruguoticating the etate of the can be laid down for fruguceticatiag the etate of the
weather from the $B$. The tollowing are protably of as geaeral applicationas uny that caa he given. It is always to be remembered that what the $B$. actually showe is the present prossure of the atroosphere; and that its varipresent prossire of at auspherical chungee which have alre.dy takeap place, the efects of which may follow their cause at a greater or less interval- - Afer slowly and uance of dry weather, steadily, rain will certiunly ehsue; but if the fine weather
b.s heen of loog inration, the mercury nay fall for two bas been of long unration, the mercury nay take place,
or three days befire any perceptible chaoge take or three days bethre uny perceptore cha rain comes, the
and the more time elapses before the rater and the more the weather is likely to last. - 2 . Conversely, if after a great deal of wet weather, with the $B$, below its mean height, the merchry begios to rise steadily and slowly, fine weather will come, though two or three wet
days may first elupe; and the fine weather will be more daye may first elupse; and the fine weather will be more permaneot in proportion to the length of tiose that passee
before the perceptible change takee place. -3 . On either before the perceptible change takee place. -
of the two furegoing suppositione, if the chang immediof the two foregoing suppositione, il me chaug, the change
ately ensues on the nution of the nercury, then ately ensues ou the nution of the
will not be permanent. 4 . If the $B$. rises blowly and steadily for two days together or more, fine weather will come, though for those wo dayb uny raia lacessanty and the roverse; but if the $B$. rises for rwo days or mor during raib, and thea on the spparace of be wery tran-
begins to fill again, that fine weather will be ver
sient, and rice rersd. -5 . A suden fall of the $B$. in the epring or matuma iodicates wind; in the eummer, duriog very bot weather, a thnuderstornm may be expected; it winter, a sndden fall, after frost of some continnance, in-
dicates a change of wiml, with thaw aud rain; but in continued froot, a rise of the mercary indicates approach ing soow. - 6. No rapid tluctuatione of the $B$. are to bo ioterpreted as indicating either dry or wet weather of any continnance; it is unly the slow, steady, and cou7. A rise of tha mercury late in the antnma, after a long continuance of wet and windy weuther, generally iadicantes a chango of wind to the northern quartere, and the approach of irvot. - There are many forms of the mercurial $B$, but they are all modificatione of the siphon and cisteru, therefore scientifically unimportant.- After the description and appliances of the mercurial $B$, we now propose to dexcrite, sfter
gid $B$, a new instriment, lately invented by M. Viti, o Parie, for ascertaining the variatione of the ntmosphere withont the use of any liquid. Its action depends on the effect produced by the pressure of the atmoephere on au
metailic hox, from which the air has been exhanzted and metainc hox, from which An index, traversiog a dial, thes bermetically senled. An index, traversiog a dial, phere on a given surface-we will Euppuse a equare inch. Though for parely scientific purposery the aneruid is at present far removed from competition with the mercurial ecnsibility and its portability. Much has been urged againat its varistions from temperathre; in a range rood 200 to so $0^{\circ}$, thene celdom exceed a tenth of an inch: amd it must be borne in mind, that, if the merenrial $B$. be
subjected to the eano range, it will to equally affectod; subjected to the eano range, it will we equaly affertri; only in the latter case thocause of the variation is satio-
factorily estal)lisbed, nud its exact anonot for every defactorily estahlisbed, nad its exict amonat for every degree of temperature accuratety deat for the first time) introduced into in inetrument, with a view to effect a correction for variable temperaturee, and from its being an invisible agent, a ehort explanation may he required io verification of its being adequate to produce the resulto asserted. Even at the present time, no table has been calculated in order to show the loss sustained by elastic bodies when in a state of tenvion. Perliaps no instriment, although mado for the express purpuse, could exhitit an experiment more satistictory for tho proof of this point than thr ancroid. We aro onaldhted tase ic as a pyrometer by applying tho heat of a lighted taper
to the spring 8 , (Pig. 243, , without communikating that to the opring 8, (Pig. 2ass,) without communceting that heat to the vacum viase. A table of direct expansion
wovhl canse us to concluie that, as the spriug 8 woild, on boing heated, bowome longer, it would raisc tho lever, C, higher; but the "xperiment aluve ulverted to produces a contrary result. (for tho spring, S, losing ite clasdic power through heat, is firculd down liy tho ntmospheric prensure on the vacman-viuse, , und provee that
the fows of slastic force is greater than that of direct exthe lows of clastic forco is greater than that of direct ex-
pansiun. The hand of the anoruid indicates this, liy moviug towaris the right, or "Set Fair." We might
 mutal of which the viccuam-viou was made, womad pro-
portionataly inereaso its cap.ueity; whereas, the coutrary is arthatily the cave:-a conclosion which is proved by
buating the van num-vove abono. It must be rudmitted that the metal daiphragman have becone hoth larger and wokker by ma increces of temperature, whence the capacity of the vacnum-vive would bu rendered grenter:
but it must ho adso remembered, that thu ntmopheric presurn on the xurfines, numanting to a force of 4 Ibse , by hout, clower togeflur, wor that the cavity of the varunalvane has in fact hecome nmaller. This briagn ux to the nnhjert of camperanathon nccompliehed by tas. On the

jaches in diameter, this aurface gives for its product a pressure of abont 731 iss. os the vase; though from many canses this anount of atmospheric pressure is considerably reduced. Io order to ascertain the actual weigh produced by the atmosphere upon the surface of the vacuun-vase, recourse was had than experimentelyard, ing pusitive demonstration. Whe hook of a stee upper part of the vase by the pin $K$, and, on being palled ul to the point parallel to the top of the vase, showed the weight of 44 lhs.; which is, therefore, proved to be th force hy which the lever C ie kept on its fulcrums, B B and on the top of the spring S . - It is hoped that the principle of the aneroid has, irom the foregoing explaostions, been made sufficiently intelligible; and, if so, it will be an easy task to describe the remainder of the brechanism. We will now refer to the perspective drawing of the interior of the machine:-D $D_{\text {, vacnum-vaso }}$ CC, lever, to the end of which is attached a vertical rod 1, which merely eerves to coonect the lever, CC, with the levers 2 and 3. These levers are coniected by bow-piece, 4. The two sqnare-headed screws at $e$. adion, of the distunce of teverase, as to allow the hand ation of the distance of leverage, as to anowne the aneroid th move over a epace corresponding with the scale of a stiondard mercurial barometer. To the end of the lever 3 , is attached a licht rod, terminating with a piece of fine watch-chain, which is attached to a snall roller. On the axis of this roller the band of the aneroid is firmily fixed, and kept in its position by means of a
flat spiral syring, the outer coil of which is seen attached

Fig. 295.-Aneroid marometer.
to the axis. This flat spiral spring, which is alwaye in a state of tention, maintains a pressure agsunst the orce of the levere, atod kecps the hand of the aneron in obedience to the indications of the vacuum-rase. Were sry at the point to whe it had been propelled
Baromet'ric, Baromel'rical, $a$. Pertaiaing or
Baromet rieally. adv, By means of a barometer. Haromuet'rogratph, $n$. [Gr. baras, woflght, metron, self-inscriling upou paper, the variations of atmospleric pressure, obtiancd from onimute to minate. In this bewly invented contrivance, the records are continuons and comparable, and are produced by the variations of the aneroid barometer. The pressure of the ntmosphere a fects fonr metalic boxes, having their upper and under facee undolated; a vacunm is made in eash of them beparately, and they are atached tugether in one series, so that for an eqnivalent of prossure the movement is fonr times grenter than it is for one box only. A very 6 trong fat steel spring acts upou tho waroric presuro Thio gupring controld the indicating lever ly meanx of a connector, which receives the action from the extremity of tho opring, and communicates it to tho lever nt a point very ckese to its axis, wheneo it follows that a considerablo maltiplication of movements is the result. The indicatione of the movenmente of the lever are registered in the fillowiny simply manner: a cylimper is revolved by the regular movemont of an ordinary jemdulam timepueco; it makes a comptete revolition in one weck, han carries a glazed puper, which has been emuken black by
menns of a condle. At the extrunity of at hever is o very fiuo epring, printel at the enul, which rusta npon the Eyinder and tracen a white line upon the blawk kround. At the end of each wrek tho papor in changiod for a fresh
 arrangement of this instrument is lar lewe linhlie to error than the ordinury nocroid, wheros so nany muverements and nevesuriox are required to transhate the changes of
the larometrie lowx to the indicating uectlo on tho face of the inarrumet

## BART

May, 1588. - It was followed, doring the war of the Fronde, by another contest of a sonsewhat similar chat acter, 26th Aug, 1618 , when Aune of Anstria ordure
the arrest of three popular memberbof the Parliament. In Jnly, 1×30, the elder brinch of the Bonrbons, and in $r^{\prime}$ eb., $1+18$, the Orleaus branch of the same family, were driveo from the French throne, after a struggle at the harricalks. General Cavaignac, in defence of the Provisional Government, waged a fearfnal cootest with the insorgeota, who bad erected harricades, $23 \mathrm{~d}, 24 \mathrm{thl}, 25$ th, ani 20 Jith June, 1878 , in which he was at length victo-
rious. The killed and wonnded amounted to 15,000 and about 8,000 of the rebele were taken prisoner taken other precautions to prevent the recnrrence of taken other precautiona hoprevent events.-Barricalps have also been erectel, during popnlar outbreaks, at Berlin, Vieona, and uther cities on the cuatinent of Europe.
Barricade', v.a. To temporarily fortify a place or pas sage; to stop up an avenoe; to obstruct ; to secure.

Now all the pavement sounds with trampling feet,
Aad the mixx harry barricades the street."-Gay.
Barrirad er, $n$. A person who erecta a barricad

Bary'tis, Barytes, Oxmes of Baricm, $n$. [Gr, barus, heavy. ] (Chem.) A grayish-white porous alkaline
earth, discovered by scheele in 17it. Sp. grav. abont 4-00. Its taste is harsh, and more canstic than lime, acting on the stomach as a vielent poison. It turad vegetable blaes green, and is a nou-cuoductor of elec-
tricity. B. i. it fuses, and penetrates the charcost, aD tricity. B.B. it tuses, and penetrates the charcosl, an
effect probably occasioned by the presence of water, as effect probalily occasioned by the presence of water. a by the strongest heat of a forge. When sulpharic or chloruhydricacid is poured on baryta, it becones red-hot When water is pupred on it, baryta is slaked like quick white with the evolution of heat; the mass bccom it completely, the laryta er stallizes, on couling as hydrate (BaOHO), and it then absorbs carbonic ucid Irom the air, and mast, therefore, be preserved in closely stoppered bottles. It dissolves in 20 parts of water forming baryta-water, much osed as a chemical ret agent. Boiling water dissolves halr its weight of bnryta, and deposes, on cooling, four or six-sided prismatic erystals, containing 10 equivalents of water. Porm. BaO suls of B.-1. They are generally white or colories,
and crystalline. 2. The soinble salts of baryta give white precipitate by sulphuric ncid and alkaline sul plates, ineolable in nitric acid. 3. Ammonia does not precipitate baryta, while soda nad potush do. 4. Yelow prussiate gives no precipitate. 5. The soluble salt municate a greco tinge to the flame. 7. Snlphate of lime in solution precinitates baryta ealts immeriately 8. Chromate of potash precipitates alkaline, hnd nettral solutions of salts of barium, yellow ; insoluble in alkalics and acetic acid; while no precipitato ocebr with strontium and lime salts.
Hydrous Chloride of B. Spec. grar. 3.049 (Karsten) Commonly colorless tables, referable to the righ prismatic system. Taste, pungent and disagreealle beiny heated, but not lignefying. by ignition it lases, lut does nut decompose. Firm. BiCl2HO. The anhy drous chloride, which results from ignitiog the liydrate, is a white mass, with a $5 p$, grav, of 3.70 to $4 \cdot 15$. When heated*in contact with sterm, it gives out chlorohydric acid, and becomes alkalibe. Form. BaCl. It may be prepared by dissolving the dative or artificial carbonat of baryta in chlorohydric acid, and erystallizing. It is
principally used for testiag and precipitating sulphuric principally used
Carbonate of $B$, found native as Witherite. It is used as the source of many baryta salts. It is a debse white powder, falling as a precipitate when a solvble carbon-
ate is added to a solntion of baryta salt. It is nearly insoluble in water, but dissolves readily in acetic, nitric hydruchloric, and several other acids. Form. BaOCO2 Nitrate of $B$. is formed by dissolving the carbonate of baryta ia very dilute nitric acid, and evaporating and erystallizing. It forms white, translucent octahedra, which are anhydrous. It is soluble in 8 parts of cold the preparition of buryta, for chemical purposes, and for detectiag acids in abalysis. Form. BaONO.
Sulphate of B., Ifcavy Spur, Borytine, is an ortho-
rhoulic mineral. Lustre vitrons, inclining to rhomlinc mineral. Lustre vitreons, inclining to resinons sometimes pearly. Strenk white, color white; also incliaing to yellow, gray, blae, red or brown, dark brown Transparent to trausicent ; opaque. Sonetinse日 fetid,
when rubbed. Optic-axial plane branchy-diagonal. Sp. when rabied. optic-axial plame branchy-diagonal. Sp.
griv. $4+4$. It occurs in natare nonorphons, and artifi-
 parta cold water (Ktrwan); oil of vitriol diesolves it by boiling, but it is again precipitated on the addition of water (hithering). Wheo luatiod, it decrepitates from tho conversion of hygroseopic wator between ite phates into stesun. D.n. it Tases into un opaque white globnlo When made into a paste with flour unt wator, und igWhen made into a paste with thour unt water, und in
nitect, it phosphoresees in the durk, from the sulphide formed hy heat probnbly gyran nimitige with oxygen and beomming sulphate. Ais Italian shoemuker, natuet Stocenzo Cusciarolo, first Dbserved that the Bolngna
stond the foot of Mount Paterno), a varicty of beavy spar, when ignited, became luminons in the dark (Lemery). Sulphate of harytes is fonnd ulong with galema in the graywacke formutions, and likewise in the conal melles, athd in the oll red andstane comglomeration. It is naked to mix with whito benul in puintang, bint is uf po value, ns it is trunpurout, and thus injures tho white
lead. To reader it fit for this purpose, it is ground hy lead. To render it fit for this purpose, it is ground by
millatonen, nud then by stones und wator, Into a fine millatoven, and then by stonee und water, Into a fine
powder. The puwder is digested in אulphurie achl in pawder. The puwder if dizested in kulphurie neln in

first hase, and is succeeded by player after player ontil places at the bat, and in like manner play their ioning When he sneceeds in reaching the hone base, uotouched by a hall in (not thrown from) the hands of au adversary, and after suecessively touching the I8t, 2d, and sd bases, the is entitled to score one run. Nine invings are phayed on each side, and the party making the greatest number of runs wins the game. The bat in common use is a ronad stick, of ash or other hard wood, or of white pine or willow, from 30 to 40 inches in leogth, and from 2 to pers gradually to the handle. Players adopt different atyles of batting, some holding the bat inclined over the shoulder, and others hitting from below as in cricket, while many attempt modifications of either method. The game above described is commonly knewn as the New York ganue, and differs in several particnars frow that called Massachusetts game, which is generally played it New England. In the latter, the batsman stands in the middle of une of the sides of a square of 60 feet, the 4 angles of which are marked by 4 stakes representing the bases, the lst hase being on his right, aml the pitched or tussed by the thrower, who stands 35 feet in front of the batsman, nad a player is put out if the ball fion the stroke of his bat is caught without having first tonched the ground, or, techasically speaking. to on the fly," by an adversary, if 3 bulls are struck at nad missed and caught each time by the catcher, or if while running the bases he is strack by thie ball thrown by an adversary. The putting a player unt by striking him with the ball, which was the practice in the original game of base-
hall, was discarded in revising the New York game, ob hall, was discarded in revising the New York game, on account of the severe nccidents which sometimes resulted. Buth ganied, when properly played, require close atteninvigorate the frame, ns wetl as to aford an agreesble and manly pastime to hoys or men. They are not less skilfully constructed than ericket, which has long been conand ball, and ly many are considered to have an advantage over the latter in respect to the greater rapility with which the innings aiternate, and the opportuaities enjoyed by each side for a temporary rest from the labors of fieling. - The dress of a base-ball playur should con-

was afterwards used to denote lange buildings, erected in Rome and othrr cities of the Rowan empire, for the administration of jostice. They aino served the purpose of an exchange, in which merchants transacted their bnsiness, beiog generally built is the immediate neighborhood of the forum. The follewing was the method of construction generally adopted. A large central epacs, about twice or three times as long as it was wide, was testudo, wis supported On either side of this the lestudo, was supported. On either side of this space the columns of the testudo, and sapported ou the onter side by another row of smaller columes, at a distance of about one-third of the breadth of the central spue from those that held the main roof; a wall was afterwards substituted for the onter colomans of the pertico, to nfford shelter to those within the building. The por fico was dirided into two parts by a floor, the uppe part forming a gallery for the nccommodntion of those who were looking on at what was pascing below, or perhbps for the expesure of commodities for sale, or for bule, or large porch, at one end, and at the other a tri bunal for the administration of justice, with a semicin cular recuss, or apse, for the julgu'y suat with chal dica, or chamhers, for the use of the judse, counsel, \&c on either side of it. Basilice were unknown in Rome until about B. c. 200. The best examule we have of the old $B$. of hall of justice, is that at Pomperin, built on the S.W. side of the forum. It is to Constantine that the orst Chisistian churchen, knewn oy the tame of B., or to he referred. They bore as very conplete resemblance to the antique $B$, butb in plan and pruportion: bnt he cructrorm, malematic or (hastia, soon operated torsection of the cossing aisles produced which it was untural to priarge und make principal is the cumpusition ; and the insention of domes, suppertel on pundentives, enabled the architects to give size and digoity to the centre, withont interrapting the vista of the aisher. The church of St. Sophin, at Constantino ple, was the first example of this forms. Its best pointa were copied on the fots century, by the venetians, in the church of St. Bark. This is the first in Italy which was constructed witis a dome supported on pendentives and it is also this which first gave the iden, which ha beon imitated in St. Peter's, at Rome, of accompanying

four drugs."
Basiliditans, B. pl. (Fcel. Hist.) Tho thane of religions sect foueded by Busilides, a Gnostic of Alex which formed the groupd-work of his system were thuse of emauatios and doalissu. He held that the oureveuled God evolved ont of hioiself the several nttributes which express the idea of absolute perfection, being the intedlectual powors, the mind, the thinking powers, wisdom, might, and, listly attributes. These seven powers, which the repy living, self-subsistent, and ever actise, together with the primud ground out of whel
constituted the first agdoud, or octave, the root of all existebce. Each of these spiritual enberless prodution of existeaces, each lower one being still the impression, the antitype, of the imnsediate higher one. As he hisd in his system serea homogeneons natures in cach gradation of the spiritual world, so he is said to hive held that there were 363 such regions or gradutions of the spiritual world, unswering to the days of the ye One grand idea of this systera was, that, in different ile grees, and uatler different forms of application, one haw pervades all stages and kinets of existebce; nad that everything, from the lighnst to the lowest, is guverum by a sisgle law. How he accounter for the
of evil does not scem clear; but he hed that every-
where, as rust deposits itself ou the surface of iron where, as rust deposits itself ou the surface of iron and life, - the evil to the good, the ungodlike to the gedlikel - withont, however, the origioal exsunce beins therely destruyed. The whole course of this present world he considers as intebded for such an ebd; that the godike may be cleansed from ill impuritios, that restored to their onginal paricy. As a process of parifidevelopment of the human race as a process of purifi-
dation, which was to be perfected by Cliristianity. Ints great sibi was to verse as ode tempes of rode io his minil ahove everythin else; and when he was perplexpd with difficultice, his last werds ever were, "I will kay anything sooaer than deabt the goodness of Prosjdence." The development of this system led Basilides and his followers into many erroucous opiaions. particnlarly with respect to tbe character and mission of Christ, whom he did not regard as the Redeenter: and held that he differed from other men ouly in degree, and, like the rest, himsell

transferred from Pavia to Sienna, ond from Sienna to B., assembled 23d July. 1431, and wits conclnded $16 t$, Its chief oljecte were the puion of the Griek and Latin Churches, ind a general reforonatiou of the Catholic Charch. The Univeroity of B. was founded by a pasall bull of Pins 11. in 1459. Treaties of peace were concladed bere betwert Frunce and Prossia, A pril 5 and
May 15 ; between France and Spain. Jnly $22 ;$ and be tween Frince ank Hesse-Cassiel, Aug 2s, 1795 . The B. Cuuncilof.
it was convolsed hy Pupe Martio V and of Constance, Engeoius 1V. It commenced its sittiags, Dec. 1 $4,1+31$, Cesarini of St. Aogelo. The oljects of its deliberations were-to extirnate heresies, (that of the Hussites in par-
ticnlar,) to nnite all Christian mations under the Cathoticnlar,) to nnite all Christian wations under the Cathoprinces, and to reform the Church. But its first steps towards a peaceable reconciliation with the Hussites,
egainst whom Julinoo had unsuccessfully pnblished a against whom Julinoo lad unsuccessfully pnblished a
crusade, were dibleasing to the Pope, who anthorized crusade, were digpleasing to the Pope, who anthorized
the cardinal legate to dassolve the council. That body opposed the preteusions of the Pope, with severe animadversions ou his deceitful condact, and his neglect of the welfare of the Church; and, notwithetandiog his repeated orders to remove to Italy, contianed its deliburations under the protection of the Emperor Sigismund, of the German princes, and of France. In order to secure itself agninst the attacks of Eugenius IV., it re-enacted the decrees of the Council of Coustance concorning the power of a general council, (in matters of
faith, of ochism, and of reformation, to command the faith, of schism, and of refornation,) to command the Pope, as well ns all Cbristeadom, and to punish the dis-
obedicnce of the cler of its judicial character as the representative of the of its judicial character as the representative of the nad remonstrances of the Popeagainst its proceedings of no force, and began a fornall process against bim, after he had issued a lull for its dissolntion; required hin cised, us mach as pussible, the papal proromatives i France nod Germany. Meanwhile, it concluded, in the nasie of the Church, a peace with the Innssites, and
then proceeded to tho reformation of the cler $u$ y by orthen proceeded to tho reformation of the clergy, by or-
dainipy that the clergymen who maintained concubines, daining that the clergymen who maintained concubines,
and the prelites who received money for permitting it, and the prelites who received money for pormitting it, the pollia, \&c, should be regarded as simoniteal, an future; that the divine service, the mass, and the canenical hours should lee regnlarlyobserved hy the clergy of each class; that the Feast of Fools, and all irreverent celebrations costomary in the Church about Christmas, sbould be abolished. In the $23 d$ session, (March 2 $1+36$, the form of election, the confession of faith, and the oflicial oath of each pope, by which he bound bimscif twobey the decrees of the conncil, and the annual
reperition of the same, were provided for; all proferreperition of the same, were provided for; all preferment of the relations of a pope was forbidden, nud the tors of atl nations, who should be elected by the free votes of the colloge, should be entitled to half of the revenues of the states of the Church, should watch ove he Pope, and atways sigu his buns. Genoral councils often been prevented by then from nsembling, on accuunt of their limitations of the papal power; and the proceedings of the Council of Baslo muxt have exasperated, to the highest degree, an obistinute man like Eugenius IV. IIe continunlly remonstrated with the sorereigas against the decrees of the council, which, in its
torn, decreed his suspension from the papal chair, in the 31 st session, (Jan, 24, 1438.) The removal of Eugenius who till then had apeakers in the council loft Basle. yet after vielent de bates, (Miy 16, 14:39) the conncil declared Eutgenins, on accoust of his olstinate disobeslienco of its decrees, herotic, and formally diposed him, in the fullowing ses ion, as suilty of simony, perjury, violation of the law of the Clurch, and bad administration io his office

(Hist ond
(Hast, and Law.) The Romans distinguished two kinds spurit, the children of prostitutes; the former coald in berit from the mother, and were entitled to support from the father; the latter had no claims whatever to support. Is non habet patrem, cui pater est phpulus. The Atheulans treated all $B$. with extreme rigor. By the laws of Solon they were denied the rights of citizenship. What rendered these regulations more severe wats, that
not only the issae of conculiasge and adultery, but all not only the issac of concubinsge and alultery, but all
children whose parents were not both Athenians, were chidren whose parents were not both Athenians, were
considered $B$ at Athens. Thus Themistocles, whose considered $B$ at Athens. Thus Themistocles, whose
mother was a nutive of Ifalicarnassus, was deemed a $B$ mother was a nutive of Halicarnassus, was deemed a $B$
The condition of $B$. has been differeat in different periods of modera history. Among the Goths and Franks, they were permitted to inherit from the father. Wil linm the Conqueror, natural son of Robert I., Dake of Normandy, und of Arlettg, daughter of a farrier of Fs laise, inherited his fither's dominions. He called bimself Willelmas, cognomento Butardus. The celelrated
Dunois styled hinnelf, in bis letters, the Bastard of Or leans. In Spain, $B$. Lave always been capable of ioher iting. The bnstardy of Jeary of Trastamare did not prevent his accessiun to the throne of Castile. In France the Cols Ciril thus fixes their rights: If the father or
mother leave legitimate descendints, the $B$. is entutled mother leave legitimate descendints, the $B$. is entatled
to one-third of the portion he would bave iuherited had he been a lawful child: if the father or mother dia without doscendanta, but leave asceydants, or brothurs or sisters, then he is antitled to one-balf of snch a portion If the father or mother leave no ascendants nor descendants, por brothers wor sisters, he is entitled to thre quarters of such a portion: and if the father or mother leave no relations within the degrees of succession, he is entitled to the whole property. Tinese regulations do not apply to the issue of in incestuous ar adulterou connection. According to the ancient customs, the bastards of kings, acknowledged by their fathers, were princes; those of priaces wers gentlemen. - By the com-
mon law of Euglapd, a child born after marriage, howmoa law of England, a clild born after marriago, how so; for one born in wedlock, and long enough after the marriage to udmit of the period of gestation, may still be
proved itlegitimate, io case of nusence and nom-acess of the husband, and ander some other circumatances cording to the common law, a $B$. is not the heir of way one; and, on the ather hand, his only heirs are his chil drea boru in wedlock, and their dascendants. Accord ing to the Roman law, one born ont of wedloek might be legitimated ty subsequent marriage and arknowledgment of his parents. 1n 1236 , ths English prelates
proposen the intioduction of the Roman law, in this reproposed the intioduction of the Roman law, in this respect, into England, to which tha nobility mate the cele-
brated reply, Noluraus leges Anglice mutare, ("We aro unwilling to chango the laws of England.') 'This rnle of the civil law has been adopted in many of the $\mathbf{U}$. States. In Lominiana, it was miturally adopted as a part States. In lominiana, it was maturally adhpted as a part
of the civil law, which is the basis of their code. The rule, that an ante-nuptial child is legitinuated by the subsequent marriage of his pirents, und by heing ac-
kuowledged by his father, has bren engrafted into the kuowledged by his father, has brea engrafted into the Inws of Pennsylvania, Vermont, Ohio, Oeurgia, Imbliana, Alahma, Minvouti, Mississippi, Maryland, Kentucky,

Bastiat, Frenenc, a Fredch political ecoaomist, D . at Bayonme, Isol. He was one of the first leaders of th free-trade agitation in Fratace, and published, after visit to Eugland, a translation of the spreeches of the Englixh Anti-Curn-Law agitators, with an introductory account of Cboden et la Ligue. Afterwards lie edited the Frencli jourual fonoded for the propagation of free-trade the constitgent and the legislative assemblies. His prin the constitaent and the legislative assemblies. His prinBas'Ifle, Jules, a French author and jouraalint, B, at Paris, 1800 . He entered upon the legad jrofession, and took an active part in the opposition to the Restoration Taking part in the disturbances of the 5th und oth June, 1832, he was obliged to seek as asylum in England. In his absence he was condemned to death, par contumace; bit on his raturn to France, two years afterwards, he nuderwent his trial, and was acquitted. For several year he then edited the ". National." On the 6th May, 1848 he was appointed Minister of Foreign Affars; a post in
which he was continued till the Ioth Dec., by his friend, Which he was continued till the loth Dec., by his frietid,
Ged. Caraignac. He is the author of nany political, philosuphical, and scientific works; amony them a treatise on Public Edueation in Frunce, a Ifistory of the French Religious Wars, and a work entitled, The French Republic anut Ituly, Brussels, 1858.
Bastile', $n$. [O. Fr, bastille, fortress, from bastir, batir, to buitd.] In its original sease, a wooden tower or fortalice temporarily used in warfars; a tower; a fortifich-
tion. In England, this name is sometimes tion. In England, this name is sometimes given to a
 France, similar to the Tower of London, and commenced in the reign of Charles Y., 1370, by Hugh D'Aubriot, Mayor of Paris, It was not completed until 13s3, and
was afterwards improved and strengthened in sach was ifterwards improved and strengtheaed in sach a
manner, that it tuecame one of the strongest fortresses of the kind in Europe. The discipline and the police regulations of this once fimolls, and all-drended prison wers of the strictest kind; and the gecrecy minutained as to the persous confined iu it, caused it for centuries to be regnrded with minrled feelings of awo and horror Once within its walls, hope seemed left behind. The noblest, equally as the meanest of the land, wore liable friendx, naconscions of the offence imputed to them, ani friend, naconscions of the offence imputed to them, and
without any forim of law and justice other than an oriler Without any form of law nad justice other than an order
for their incurceration, termed a letire de cuchet, sigard by the monarch or one of the seeretaries of ntate. These ordery were sometimes given on the request of a favorite canrtier or of a roynl mintress, with blanks for names to bo filled up as they chose. Hence, they too frequeutly

B:at, n. [Soot bak, bauhie: Swr and Govth. nutlbacka-natt neght, and bucka, provably for wack a, to wake.] (Zwöl.)
The common name of the mannals composing the ord. Chvioptoru. The singular atimals wbich come mader this deaomination, were lony considered hs parsining so mach of that it was thought diftienlt to assign to them a peds, that it was thonght dimennt to assijn to them distiact station in the system of antare. Such dunlits however, have long since yielded to scientific jevestigit tion; theic anatonical and intestinal structare, their viviparons atare, their hair, \&c, entitling them to he ranked as quadrapels. Still, it is oot to be lemied, that their peculiar conformation is admirably calcolated for the exurcise of considerable powers of fight. The air indeed, is their home: through this they move with great rapidity, and with great apparent eake, wheeling in every direction io search of their insect prey, and performing the most auropt evolutions to secare it. A prad , thet in their mosle of flight, $B$. lear a very strons resemblance to swallows: exercising the same parpose in the teconomy of nature, in restraning the multiplication of the crepuscular and nocturnal iusects, an the swallows do in regard to the diurnat. Their susases of smelling, feeliag, and hearisg are wonderfally acnto. In many gsocta the oose is furnished with a membra nous folitition of the most dehuate etructure, by which tbe sense of smeling is greatly rofined; the eurs also are, io many kinds. expatsded, and capable of being folded dowa; while their ample wings, and the membranons tissucs of the ear aad nose, are so ahmmant ysupplied
with neryes, as to enable them, even shoold they be tic With terves, as to enable thema, even shonid they be ticprived of sight, to parsne wointerroptedty their aering throngh tha narrowest apertores. On the approach ot cold weather the $B$. hybernates, aud in preparing for this stat of lifeless igactivity, it seems rather to solent a place where it may remun safe from molestation, than wher it may be commodionsly lodged. At an carlier or lat.period of autunth, they retreat, generaity in large congregations of various species together, to the most ri-
tired places, as noder the roofs of honses and whurchess, tired places, as under the roofs of honses and whurcher in carerns, in the hollows of trees, and similar sithations, where they snspend themselves by their hinder elaws, with the hend downwards. Fere they crowd of their retreat, but by each other, onecrowding over another so closely, that it appears scarcely possihio forsuch nnmbers to occupy so small is space The Common bat, or flitter-mouse, (V. pipestrellus,) is frequently met with in

Fig. 307. - тнE common bat, (Tespertitio pipestrellus.)
his conntry. It makes its appearance in the trilight of the vicinity of guict, streaus, where any bort of poctur nal insects ahonall. Although not more than two und a half inches long, or abont the size of the conmon browe
monse, it is very voracious, and must io a single evering

thit, that which is enveloped or covered, an beans.
(Agrac.) A wall.knuwn (Agric.) A well-known regetable, hargely cultivited
both in fied and garden, me a highly nutritious atiment both in fietd and parden, na a highly nutritens atiment
for man, and a fund for hores. All the varictes are wholesume nut nutrituve, but the twas nperies the most generally in ase as aliment aro the lieid or Milos valget-
 bean, haricet, polo-bean, kidneg-lean, und ntring-bean. Their staputitic chariseters watl be described under the
 wider them only io an agricalturul point of siew. - The
Fiaba vulyaris, or common bean, of whel there are oev-
 rounded sereds, which wro used in the soft yoang statc mals chietly, ctither whole or ground into meal. In some places, bean-meal is moxed with uther meat it making cuarse Lread; or the Leans are beviled intu a mens witb fat ment, iis which otate they are very palatable and nu-

 kagat, all prodoctive athl palatable. In the field the or 11 oligetand bean, are prefured, leeing luraly as well as protoctive. The long pod is usually sown in the
fidd, the Mazagan sud broad Windeor lema moldom. There is no platit in wheh the tratasformation of the cotyledons into seet-lenaves is moro readily traced than in the lean. If a bean is planted in moist carth. or dous will swell aul suot barst the skill which cuvelopis them, scpariting into two lobes, which open like the shotls of an oyster. It the part which forms the juint an oblong body will appear, which is the entryo stem
of the plat. This increases tapidly in the earth, and of the plant. This increases tapidly in the earth, and
pnshes a root dowawards, aud a stem upwords, which pushes a root dowawards, and a stem upwards, which ground, when they expand, and aro transformed into sedd-leskes. $A x$ soon as the sead swells by imbibing atmosphere and in water, auts ajon tho fariuaceons out atmosphere and in witer, acts apon tho fariaaceons outh-
stance in the seed, athd takes a portion of carbon from it, prodncing carbonic acid, which is absorbed by the surronnding plants, or flies uff in the state of gas; liy this luss the remainiby substance becomes a mud flrid emulsion, analogous to the milk of naituals, which. Leing tiken up by the minute versels of the radicle, nuurishes and increases them. Iu proportion as the
farina in the lobes is gradnully expunsted, new vessels farina in the lobes is gradnully exlunsted. new vessels 8ppear through the sulstance of the lubes, conveying the
newly formed juice from every purt of them into the root and stem, and, at last, the cotyledons are tratasformed and stemb, and, at last, the cotyledons are trabstormed
inte seed-leaves. The fibres of the roots are by this time completely formed, and their extremities, catied spongioles, from their appearumee whea closely examined, have acquired the power of absurbing noarishment from the having put forth new leanes of a different form from thi seed-leaves; these last, laving now performed their part. wither and soun fall off; if they are removed before this period, the plant, having lost its nurse, langoishes and dies. The hean at this a tage of ite growth requires par-
ticnlar attention. Ir the soil is rich and well prepared ticalar sttention. If the soil is rich and well preprared.
it will grow rapidly an! Iuxuriantly, and he soon ont of it will gruw rapidly and luxuriantly, and he soon ont of
reach of insects or weeds, and capable of resisting the raryiog inflneoces of the atmosphere; but if the suil is pour aod parched, and then sapply of nntritive juices and the only way to prevent a tutal failure of the crop, is to supply by art the deficiency of nature. In very a top-dressing: in those which are not extrasted, tillage alone will ehable the roots to eprend, and pive themi
wider range to seek their food io. The soil best ndapted for beans is a rich introng loam, such as prinluces good
wheat. In snch a soil the pruduce is sometimes fifty or sixty buxhela per acre, but an ayeragecrop, on moterat hand, is about hain that quantity. On very rich land
beans bive produced extraordionry crops, by bing sown beans bive produced extraordionry crops, by heing sowo preat height in faviralile seasons. When the beans have gushed their atems, and the proper leases appar
above tho gepd-leaves, the intervals should be carefult hoed. The diseanes to which beans mre enlyject are, the millew, which is a munte fungus that grows on the stems of leaves, and is cathand by cold-fogs and freqnent
suigled rariations of worther: and the back dolphin, an suised Fariations of wather: and the bhack dolphin, on insect of the uphis tribu, which appears firnt in the form of a honey-lew on the tops of the plants. Fir the mil-
dew no retuedy or preventative bus yet been fonod dew no retuedy or preveatative bus yet been fonod.
Whenever it has attacked the plants generally, before Whenever it has attacked the phants generally, before
the pods are filled, the lest method is to cnt down the the pods are filled, the best methon is to cnt drwa dhe
crop in its green state: and if it cannot be consumed in the farm-yarl, to plongh it into the gronod, where it will decay rapidly, and bean excellent manaring for the succeeding crop of what. If allowed th stand, the crop
will nut only be noprenluctive, hat the weeds will infeat the gronnil, sud opoil the what-crup by their seeds sod

To tend, or move towards: as, "Sometimes bearmg up to one another." Boyle. - To buar wilh. T, endare anything unpleasant; to forhear to resent or punish; to be indulgent to.
"Bear with me, then, if lawful what I ask." - Milton.
Bear, $a$. [A. \& bera; Ger. bür; Du. lieer.] A well-known quadruped, constituting the genus Urous, in the family Urside. There are several species of bears. Of all th Carnivora they are the most omnivorons in their diet foud, sad aearly all beiner capable of supporting thersFood, sud oearly all being capable of supporting themselves upon it; even the most carnivorous of them so by aggression, or strongly iacited by hunger: but when attacked, they prove thetaselves very formidable opponents. They havesix incisor and two canine teeth in cach jaw, twelve molars in the upper and fourteen in the lower jaw ; pendactyle, or five-toed feet, armed with strong claws, but which, not being retractile, ar more calculated for diggiog and climbing, than for tear-
ing prey. For the most part, bears are nosocial animals ing urey. For the most part, bears are nomocial animals, freduenting the recesses of mountains and caverns, and
the deptho of the forests. During the winter they lay the depths of the forests. During the winter thicy lay
np in caves and hollow trees, passing that inclement season almost withont food, and in a comparatively dor mant state, In Europe, Asia, and Aonrica, hears are pretty widely diffused, but in Africa they are mor in some other parts of Enrope, black; and in some parts of Norway it has been geen of a gray color, und evel perfectly white. Bears are reported to be very fond of honey, in search of which they will climb trees, in order to get at the nests of wild bees; for, notwithstanding
his awkward form, the bear is an expert climber. In his awkward form, the bear is an expert climber. In
Rusia, the skins of bears are among the most useful as Pusia, the skins of bears are among the most useful as well as comfortable articles of winter apparel ; ant in muny other northera countries they are made into beds, coved for the bammer-cloths of carriages, for pistol holsters, ke, and the leather prepared from them is used for many purposes, as hairness, dc., where strength is requisite. - The six principal species of the gedus are 1. The Brown Bear of Europe, the Ursus arctor, which belongs to cold regions, and lives on a variety of enimal and vagetable substances, In the autumn, when the animal is very fat and in foll condition, he retices to caves or holes in the rocks, where he hybernites, coming forth in the spring, gaunt, lean, and almost redueed to a akeleton. The browa hatr is remarkable for its 8 a gacity, and also for its ferocity, and becomes especially
Eanguinary as it advances in are. 2 . Tha White, of Polar Bear, Vrsas maritimus. This species is only found in very high northera latitudes, along the borders of the Aretic Ocean and IIudson's Bay, but dours not ex tend either to Siberia, Kamtschatkia, or the islands be tween Asia and America. It is uniformly white,-attains a great size, is very powerful, ferocions, and daring. It is mn excellent diver and swimmer, andias much at honio in the water as on the ice or land. Though, like the family generally, capable of living on vegetable diel, i is, from geographical situation, the most exclasively carnivorons of all the bear tribe, and feeds on seala, the cubs of whales, morse, aud the carcasses of whates from which the whalern have cut ont the blubber, and to
reach which they have been known to swinn mori than 20 milus from shore. 3. The Black liear of America, Ursu Americtmus. This species is tistinguished by its color and a peculiar concave facial nutline; he is found in mounfaims unt forests, from tho Isthmus of Pamumat to the north of Cumala, and suheists, fin a preat nessure, on berries and vegutahle substances, though it preys also on emall animals and inacefe, which it hunta for with great penseverance, turning over stones and tranks of
trees in its search nftec thin part of its diet. It is also

very fond of young corn, aodi, like wll the tribe, par-

4. The Grizzly Bear, Ursus horibilis. This speciea ip habits the Rocky Monatitios of America and the hille dippiag into che tracts of Oregon and Brit. Columbia;
and is, of all the tribe, $t$ he most savaige and fervcions and is, of all the tribe, the most savage and ferucions,
the tonst dreadful in size and strength, and the mosi tbe monst dreadful in size and strength, and the mosi
terrible in ferveity of nature. The force of his hug is terrible in ferocity of nature. The force of his hug is
enormons, and it is asserted that no animal it cuuld enormous, and it is asserted that no animal it cunid like grip. 5. The Malsy, or Asiatic Bear, Ursus tabiatus. The Asiatic or long-lipped bear is a native of the mountaioous parts of Iadia, and feeds on white snts, rice huocy, the palm fruit, berries, dc. This species is timid and inoffensive, burrows in the ground, and lives it pairs together with their eabs, which, when alarmed, leap upon their parents backs, and kecp firm hold while the dam and sire jog off at a heavy trot to a place of safety. 6. The Syrian Bear, L'rsus Syriacus. The she-bonro which came ont of the woons, and tare forty and two" of the mockers of Elisha ( 2 Kings in. 24), nre prabably the first bears on record. This species closely resemblen the Lrsus arcto

choice of; whereis, the Turks preserve with care a very choice of; where:s, the Torks preeerve with care avcy
long and spreading beard, esteeming the dekicincy of that respected ormument a shameful mak of survil
slavery." The slaves in the seraglio nte shaved as mark of servitule. Among the Gircekx, and especiuly unoug the Greck philusuphers, this ornament was helid in bygh estination. Athenens tells us that the Greeks wore the beard until the time of Alexander the Great who ordered his Micedunian soldery to shave it off, lest the growth of it might give a ready handle to the
enenics in battle. Socrates nul Plato wero honor with the distiuction of "bearded master" by their pupils; and the origin of the proverb, ek pogin on srophut (wise men from their beards, arose from this chass of
wise men amony the Greeky induluing ulwiys in thix Wise men among the Grems iudulcing hiways in this
ornament. The Rumans woro the $B$. natil the sth century, A. U. C., when Publius Ticinus Mena bronght ove a colony of harbers from sicily to exercise their profes sion on the Roman chins. Angustus, and the Roman emperors till Hndrian, shaved their $B$.; and Plutarch eaye that Hadriad allowed his to grow to hide the scara on his face. All the imperinal persoaiges after hadran the toga virulis among the Ronas youth, to consecrate the first-fruits of their heards to sonie deity. Honer and Virgil, Chrysippus and Pliny the younger, Plutarch and Strabo, Diodorus and Jurenal, Persens and Pru-
dentius, nill cellebrate this ornanumt on the dentins, nil celebtate this ornauunt on the fuces of
persons distinguished for the length or whiteness of persons distingnished for the tength or whiteness of
their beards. The most curious story of long $B$, is their beards. The most curious story of long B. is
that of a Midde-A ae personage - John Miyo, the hait of a made-Ave personage-John Mayo, the tall man, and uevertheless, when he untied his beard, it flowed dowa upon the ground; and the Emperor Charles $V$, is eaid to have heen greatly annised ly the wind making it fly in the facess of the lords ot his conrt. The Lombards (or Longleards), the early French, the ancient Britens, and the Anglo-Saxons nfter they conquered Britain, all nouriethed the growth of their $b$ with peculiar care The English clergy, by-and-by, (sc
Knight's Hustory of Englamd, vol. i. 1p. 136 and I 6 . Knight's History of Englanad. vol. i. 19.136 and 165 probebly in umitation of those of Western Enrope, bu Norman, the whole of whose army shaved the beard, there prevailed a bearded clase and a shaven cliss it ehort, a laity and a clergy in England. When Duke Wil liam conquered England, he insistell rigorousky uponcar rying ont the Nornaun custom of shaving: and he that constrained many of the high-spirited britons rather to atrandon their country than their whiskrs. But by-and-by they got the advantage of their ruthlees cou querors; and the higher classes iddulged in the mouss
tache, or the entire $B$., from the relga of Eilward III tache, or the entire $B$., from the reign of Edward III
down to the 17 th century. The $B$. now gradudly dedown to the 17 th century. The $B$. now gradudly de clined, and the court of Charles 1. Was the last in which
even a small one was cherished. After the restoration of Charles IL., mustaches or lip-whiskers continued, but the rest of the face was shaved; sud in a short time the process of shaving the entire fice became universil The $B$. went out of fushion in frauce in the reign of Louis XIII, and in Spain when Philip V. ascended the throne. In Russia, this fastion cootioued till the time of Peter the Great, who compelled the nobility to par with these ornaments, sometimes by laying a heavy tax upon them, and at others by ordering those he found with beards to bave them pulled up by the routs, or shaved with a blunt razor, which drew the skin after it, and ay hise death; but such a veneration hiad this people for thene ensigns of gravity, that fous of them curetully preserved their beards in their catinets, to be buried with them, imagining, perthaps, that they shoold nake but an odd figure in the grave with their naked chins. At the present time, the Jews, aud the Aribs, constant to their ancient custome, continue to let the en tire B. grow, when mourning, for a period of 30 lays. "By the $B$. of Aaron," or "By the $B$. of the Prophet," i looked on as the most solemn oath of a Jew or Muhansmedan. Among almost all civilized nations, the tendeucy is to let the $B$. grow, theugh iu a way auggested

(Naut.) In navigation, the maneuvre of sailing against the wind by tatking, or making tacks, in a zigzagg direc tiun; as, brating up a river.
(Mus.) See Beatisos. - Beating time, that motion of the hand or toot used by performers themselves, ur sume person prexidiag over the concert, to specify, mark, and
regulate the measure of the movements. If the time be common or equal, the beating is also equal; as, duwn, left, up, right, or one duwn and one np; if the time be triple or nnequal, the beating is also unequal; as, down,

Beat'incrs, or Beats, n. pl. ( $1 / 4 s$. ) This name, alway used ia thie sense in the plaral, expresses the pulsations hroblinge, or beatinge, resulting from the joint vibra tion of two soonds of the bance strenth and nearly the t all in intensity and which are almost but not er actly, iu paison. When two organ-pijes or twe strius sounded together, are nearly, but not exactly, of the eame pitch, i, are not iu perfect tone, they pruduce throbbings that may be compared to the rapid beating of the pulse: and to these, Suveur, the discoverer of the phenomenon, applied the term butlements, or B., which has sance been adopted by all writers on the subject. Dr smith has, in his Harmonics, entered fully into the sul ject of $B$, and founded thereon his wefll known syotem of Cemperament. In has ninth proposition he says, that "if $\Delta$ consonauce of two surnuls be umform without any $B$ or undulations, the nomes of the simpe vilorations of it the ratio of the vibration differs a liztle trom a perfect ratio, more ur lese, accordine is the beste are quicther or slower." His expuerinent in demunstration of this is practichl. easy, aud satiofactury. "Change," says Dr smith, "the first etriag of a violoncello for another nibout as thick as the becond. Then serew up the first string and, while it upproaches gradnally to at uaieun with the second, the two sounds will be heard to beat very yuick at first, then slower and olower, till at lust they make a uniform consonance without any $B$. or uadulations. At this juncture, either of the strings struck ulone, by the bow or finger, will excite largeand regular vilratious in the other, plamly visible; which ohow for the vilrating motion of a musical string pats other striugs is motion whose tension and quantity of mutter disprase their vi rutions to keep time with the pulses of aur propagated from the striag that is struck; a phenomenthexplinime by Galileo, who observes, that a heavy pendulum may be put in mbtion by the least breath of the month, profided the puife be often repented, and keep thae exactiy with the ribnitions of the penduiam. Aiter the ten sion." continues Dr. Smith, in pursuing his explerituent, of either string a very little, sad the sounds of the (nu will beat again But now the brotion of vie stang regular vibrations in it: a plain prour that the vibuliwn of the striugs are not ismblivenons. And while the of the strings are not isthlirvans. And while the only an audible but a visuble beatong und irreguharity is observable in the vibrations, though in the former catso the vibrations wore free and uniform. Now memary the length of enther atring between the nut nad bridge, and when the stringe are perfect unisone, mark, at a diakuac of one-third of that hength from the nat, whestrag with a spack of lak Then phate the edge of the mall oa the spock, or very wear it, and press the string, when, on sonating the remainng two-thris with the other string open, a umthm consorameo of hiths will be hentd, the 2. But un movatik the uidil a litile downuards or up 2. But on movitu the mil a lithe dannunas or app
wards, that ratio will lee mureased or dimininhed and in both cnses the limperfect tifiths will beat quicker of duwer, accordnugly ns that purlett ration is unire or lene altered. - The $\boldsymbol{B}$. furnish a very aceurate monle of determaing the propurtions fecques'y of shations, when the alsalute frequency of one of thent in know in; or thi ahsulute frequency of beth, wheth their lithporthon is knowtif for the $B$. we undally shaw enought lo lie reak-
 distmenished. Thus, if one gosund comentan of 100 vitra-

Bentily
ful, good, pleasunt.] Tho y⿴u冂lity of beig' pretty, haud-
some, fine, lovely; an assemblage of graces, of propor-
tion of parts, which pleases the enses, particularly the tion of parts, which pleases the senses, particularly the grace; lovelisess; fairness ; gracefulaess. - By modern grace; lovolisess; Lairness; gracefulness.-By molern cbaracter of what is naturally, personally, or artistically exquisite or fair. The word beauty was first applied to objects perceptible by the sight; and by an easy tran-
uition, it has beed exteoded to objects perceptible by tue sition, it has been extended to objects perceptible by the sense of hearing; as when we sprak of beautifal music, a benutiful tuae, voice, \&c. The instances of words which to signify an impression on another vense are very nuto signify an impression on another uense are very nutouch, is when we speak of lightoess or heaviness of form and of color; from the touch to the hearing, as a sharp, piercing, thrilling, peoetrating, or heavy sulnd; from the touch to the smell, as a pungent swell; from the touch to the siglat, as harsh and solt coloring; from the hearing to the sight, as nonotony of color, tone of a picture, harmony of colors; from the taste to the sight, as mellow coloring; from the tuste to the heariag, as
sweet music. This proneness to transfer words from one sweet music. This proneness to transfer words from one
object of sense to unother docs not, however, explaia object of sense to unother does not, however, explaia
why the term beauty should be exteaded only to agreeWhy the term beauty should be extended only to agree-
able sounds, and not to agreeable tastes or odors. Ihat, however, there is a cluser affinity between the perceptions of 'sight and hearing than between thuse of sight and auy other sense, it is not difficult to perceive: and the fact may be satisfactorily attributed to the followimg causes:-1. The picturesque effiect which custorn, io many instances, gives to sounds; as wheu a tune calls up the image of a person's home or the haunts of his childhood2. The expressuve power of sonnds, as iu the case of the
homan voice, when the expression of the countenance humas voice, when the expression of the countenance corresponds with the tones of the voiceand the meaning
of the words which it ntters. 3. The significant power of suands, in consequence of conventional speech. lu this way they every moment present pictures to the imagination; and we apply to the description as to the thing descriled (with hardiy any conaciousuess of speeaking figuratively) such words as lively, glowong, splendid, $l$ zminous, picluresque. To these consideratione should be added, as a cause conzpiring powerfulty to the same end, the intimate association which in our apprehenaion is formed between the eye aud the ear, as the great inl-ts of our acquired knowledge, as the only media Ly which different minds can communicnte together, and as tho
organs by which we receive from the material world the organs by which we receive from the material world the
two classes of pleasures which, while they surpassall the two classes of pleasures which, whine they surpass all the
rest in variety and duration, are the most completely rest in variety and duration, are the most completely the most nearly allied to the enjoyments of the intellect. The uncousciousness we have in both these senses of any lucal impression on our bodily frame may perhups help to explain the peculiar facility with which their perceptions blend themstlves with other pleasures of a rauk atill nobler and more refined. - But although the epithet beautiful is never applied to the perceptions of any selist except those of seeing and hearing, yet it is extended so the results of some intellectual processes, as when we
speak of a beantilal chain of reasouing, a beautiful poom, speak of butifal metajabor, a beautiful labsuage, a beatiful a boautifal metajhor, a beautiful labguage, a veatifa the word beauty is thus employed, it is merely a vague The word beacety is ofteo applied to a byllogian or a problem; but then it means clearvess, puiat, or precisiou, on whatever else be the characteristic cxcellence of thot to which it es upplivd. As the effect of beauty in visible oljects is to produce almiration, all beautifnl objects are also udmirable; and thence it was an easy stcp to aiply the epilhet beautiful to thangs which produco admarntion, althongh this fueling did not arise from the cause Which produces it in the contemplation of visiblo oljeects.
Similar transfers may be observed in other words; thus Similar transfers may be observed in other words; thus
the word law properly signifies a general command given by one intelligent being to another; but because the cffect of sach acomanand is to produce an uniformity of conduct in the persons to whom it is addressed, the term law has been extended to thoso operations of nature in which an uniformity of phenomens prosains, ferchith the cause of the uniformity is aitogether an canses of heatuty, wo shatl linuit ourach ves to the origital nud uphropriate meaning of the word in question, viz., the beauty of visible oljects. The beanty of visible objeets connssts of two parts, viz., the beauty of color and
the beanty of form, which, although closiny counected the beanty of form, which, although closely connected
with each other, arise Irom different sources, und from with each other, arise Irom different sources, und from
eonrces of a diferent character, inasmach as tho onte enurces of a diferent charactor, inasmach as tho ont
appears to be, in most cisce, a aimple cmotion, and there-
 given, while tho other is a plemaro derived from association, which is susceptible of analysis. There cannot, it our opinion, be may donbt tlutt certain colorn, and ceptain arrangementa of colorn, are naturally, and in themselven, pheswing to the eye. Chitdren are wbserved to to connut any agrumble ides with then matogy of the other shasse would, $\alpha$ promi, lesul to this ronclusfin: for un there are certain odors, tastec, nint sounds
which are maturally pleashing or dinglinwing to the nose, which are auturully pleasing or dinglivising to the nosu,
the tomgae, atul the car, no it may la preamed that the tomgae, atul the car, no it may lan presamed that
there urs certain eolors, had combinations of colorn, which are misturally pleasimg or shenile aning to tho vge

 limjart to one thing thengreable or disngrevable vict
of another; but unsociation cun novor ancount for the
origin of a clase of pleasures different in kind from all the others we know. If there was uothing originally priaciple would have no materials on which it could operate. This origin of the Ieeling of beauty uppear to as to consist in the pleasure derived from the contemplation of colors, and is such that the mind drevils on it with ploastore. Hence the furm of the antelope, the swan, or the tiger, is considered beautiful, becnuse we take a satisfaction in contemplating the muvenents which form of the are adnarably fited to produce; but the cause the mind flies with disgnst frum the filthu, por poses for which tiat animal employs it so lily phr we call the outward form of the armis, legs, neck, of the humun figure, beautiful, when their form is sutited to their respective uses; but no oue finds any beanty in the form of the hamain stomach, or intertives or liver, though equally well hitted for their several ends, becanse they sughest the uotiou of proceases which med do not willingly coutemplate. Perhaps, in atrictnees, it might be thought that the siople emotion derived from the coler of objects, is aloue proparly entitled to le considform is the its end, is only a pleasing assuciastion, allied indeed to the feelling of heauty by close analogy but still div tinet from it. This question (which is fuct is merels verbul) we have not sufficient space to discuss at lepgh nevertheless, it appears to us that ali ages and nation have agreed in speaking of the beanty of form, as well as of color, and that we ure justined in considering as included in the fecling of veauty those emutions which are susceptilile of anatysis, as well as those which are not-A certuin degree of cultivation is necessary to the perception of beady. Savage nations appear to be wearks or quite destitate or any notion of it, in the tions in childree is confined to gandy end shining trinkets, and prnaments of the person. The practice of tattooing, however is doubtless founded on notions of beauty, more mistaken even than those which formerly led the ladies of Europe to cover their hair with powder and pomatum; or, as it seems now to be the growimg fashion, to disguise the natural beaty of their hair with yellowish, red, or golden preparations. In the lower orders of civilized nations. the same indifference to beanty may be generally observed, in proportion to their coarseness and ignorance. The early development of
the seuse of bcauty among the Greeks, which is so strikingly shown buth in their mythology and poetry, and in their works of art, is a proof of their early culture and of their great superiority, even in a half savage state, to the barlarons nations by wlich they were surrounded. Auother thing esseutial to the perception of beauty, is sensilutity of mind, arising from the development of the bocial afliectious, and the cultivation of the benevolent feelings. The custon, prevalent in eomo conntries, of planting flowers on graves, and of offering nusegays to the images of saints of of the Virgin, is a mark at once of a feeling of beunty and of sensibility of mind. On
the other hand, persuns of a sour, phlegnatic, nuruse, the other hand, persuns of a sour, phlegntatic, numere,
and misunthropic temperament, sre litile alive to the and misunthropic temperament, are littie alive to the
beanty of outward objects or works of art. It wns, beanty of outward objects or works of art. It was, ing for benty, with ubsence of all sucial and lenevolent sympathies, that Milion represents the Devil us ineensille to the beaties of Paradise:

$$
\begin{aligned}
& \text { Saw undelgghted all delighe Fied } \\
& \text { of kivilug creatures, new to sight and strange." }
\end{aligned}
$$

As on the one hund, all the antisucial passions, as anger, jealousy, enyy, far, \&c., are inconsistent with the perception of heauty: so the social passiune kharpee and facilitato it, as love and pity, which, as Dryden says,
"melts the mind to love." Hence, lowliness in the human race is intimately connected with beauty, as the desire of sux is beighteued and stimulated by the beauty of it for lovers are often not only blind to the defacter of their nistresses, but sumetimes even admire them on their nisstresses, whant; whencelove is juroverbinlly said tolos blind. A third requisite to the perception of bexuty is serently and cheerfulnesk of mund, and the abonnee of overiwowering care or afliction, which engrosses the faculties and prevents them from taking pleasure in the
relutione of outwand objucts. This incunsistency is well relations of outward oljucts. This incunsistency is well
illustrated lyy the reflections of Hamlet, when he is oppressed with a sunse of the pasinful tusk impused upon him ly hin father's spirit (Act 11. se. 2.)- On the relation of tho art wu conn only obserte that of the three arts of design, viz, archifecturn, sculptere, unl pininting, the of deniga, vigenrchitectures, sculptare, whithailethg, the
two last are purdy representative arts. while the first two last are purely representave arts. white the fors gratifiatiun of the tuate. The lienuty of buidings therefrote lelunge to the class of oljects which we late lieen above examiniug: while the brauty of pictures and etatases, though closely connected with the same range of Ifens, yet forms a elass upart, and requires the cunsidera-
tion of additional elements pecullar to itself. These are alorived in great mensure From the capahilitiee of the respuretiva arts, as topendent on the materinit which
they work with and the effecte which they are thus alite to jirimluce. There are many oljucts lunutifut in natare
 lainter or aculptor; ons the uther hated, there nere many

so hard, indeed, that they were used hy the N. American
Indians to cut bono and to fashion their horn-tipped Indians to cut bono and to fashion their horn-tipned epears, till they were superseded ly the introduction of
iron tools frum Europe. of all quadrupels the $B$. is considered as possessing the greatest degree of natural or instinctive sagacity in constructing its hahitntion preparing, in concert with others of its own species, kind of arched caverns of domes, supported by a foumiatuon of strong pillars, and lined or plastered interoally with a degree of neitness and accuracy hanequalled the art of any other quadruped. But it shomsaserm conspicuons as in the northern parts of America. The favorite resorts of the $B$. are retired, watery, and woody situations. In such places they assemble to the nomher of some hundreds; living, as it were, in families, aod building their arched receptacles. From this we may pereeive to what a degree animats, unassisted either by
nutual bencit, and of attaining, by dint of numbers, thase advantisges which ench, in in state of solitude, seems unfitted to perswess; for, if wre vew the $B$ only in
the light of an indivilual, and maromerted with others of its kind, wo ehall fimi that anamy other qualrupeds "xed it in cunsimg, nal athast nll in the pewner of me noynaco and detivaces. Whers kept in restate of sulitude or domestic lamenesx, it apperars calm and indifi.rent to afl about it; wathont attedinconts or abitiathies; and fond him. kew sulybets in matural hivery have more attracted the attention of travellios, or have been more uinutely deserined by naturahats, than the instime tive buildisg operations of the B., hat they havo aecordhagly lad attributed th them powers so marvellons, as os render ridienlesus that which, if regarind meloply is a high ejuctes of nuiunal inetinet, conld wot fail the conthand universal mbmiration. The eituation of the $B$-louses is varions. Where the $B$. ure numuris well uth those hatrow crovks which connent the numenous lakes of North Amorion; liat tho two latter aro generatly chasen by them, when the diptht of water and other crremustances arc shitalile, as they lave then the advatutage of a corrent to convey woul and other necersamies to thim hashitations, and becanse, in generad, they we more diblicult to be taken than those that are built in standing water. They alway select those parts that have such a depth of water as will reaist the frost in Winter, hat provont it
from freezing to the bottom. The $B$, that build thein rom freezing to the bottom. This that buind theis liablo to ho whisem off when tho tack subpliver iried up liy tha frust, are womderfully tanght by iastinct to provide against that ovil by makimg a dam gnite across the river, at a convenient distance from their honses. The $B$-alams difier in shupe according to the nature of the place in which they are built. If the water in the river, or creak, have bat little motion, the dum is alnost straght; but whers the current is mor rapid, it is always minde with a consiterable curve, con vex towards the stremin. The materials made use of are drift-whod, grees willows, birch, and poplars, if they can be got; alsommikadsonis, internixed insuct of tlue dime: lut there is wu wher order or method servel in the dams, except that of the work buingoarried on with a reralar sweop, and all the parta being made of equal strength. In places which have loeet long frequinted by $B$. undisturbed, their dams, by frequent rymiriog, become is solid bank, capable of resisting a great torce both of water and ice; and as the willow pophtar, and bircb genernlly take roet and shoot up, they $B$. नhunses are built of the same muterints ne their dame and are always proportioned in size to the nomber of inhabitants, which seldom exceeds + old, and 6 or young ones, Instead of order or regulation being of structure than their dams; for, notwithatanding th structure than the animals, it his never been ohserved that they nim at any uther convemience in their houses, than to have a dry place to lie ou; and there they usually eat their fuod, which they occasionally take out of tho water. It frequently happens that some of the larger houses are fonnd to have one or more partitions, it they deserve that appellation, but it is oo mor than a part of the main building left by the sagacity of
the $B$. to support the roof. Ou such occasions, it is comnon for thuse diffcrent spartments, as sone ure pleased to call them, to have no communication with each othe or treble honse-s, rather than different apartments of the same house. So far are the $\boldsymbol{B}$. from driving stakes into the ground when building their houses, that they lity most of the wood crosswise, and nearly horizontal, and withut any other order than that of learing a hollow or cavaty in the middle. When any unnecessary branelies project inward, they ent them off with their teeth, and tiruw them in among the rest, to prevent the mud from falliog throngh the roof. It is n mistaken
notion that the wood-work is fret completed and then notion that the wood-work is first completed and then
plastered; fur the wbole of their honses, as well as their plastered; fur the whote of the from the fondation one nass of mod and woud, mixed wis the the of buttom of the crepl wrom pund nemr the door of the honse and, thongh their fore-paws are so small, yet it is held cloge up between then nuder their throat; thus they carry bith mad and stones, while they always drac the wood with thejr teeth. It is a great piece of policy in these animals to cover the ontside of their houses every fall with fresh mul, and as late as possible in the anturan, even when the frosts become pretty severe, as by this means it soon freczes as hard as a stone, and pre vents their conmon enemy, the wolverine, from disturbing them during the winter : atd ags they are fre to give a flap with their tail, particulurly when plung ing into the water, this has, without doubt, given ris to the vilgar opinion that they use their tails as a
trowel, with which they platered their houses: whervas that flupping of the tail is no foner thatu a custenn which

 tions of these aniunals are finishod in Angust, or carly

"Ten months after Florimel happen'd to wed.
To make the bed. To put the bed in order after it has been used.
I keep his thase . . . and make the beds and doall myself." Shaka. To put to bed. To deliver of a child.
(Hist.) In early ages it was the practice of mankind to stretch themselves upon the skids of animals, which ancient Britons before the Roman iovasion ; atter which event, the skins, spread for this parpose on the floors of apartonents, were changed for hrathand rushes; and, is the course of time, the introduction of agricalture sup plied the more civilizel of the English with the greater comfort and convenience of straw beds. The lieds at the inns of this period were filled with the soft down of
reeds, and those of the Roman patricians with feathers reeds, aoll those of the Roman patricians with eathers-
io Wales, as late as the end of the l2th century, the beds of the humbler class were stuffed with rushes, and straw wasused in the royal chambers of Eugland at the close of the 13th. Beds appear to have been the chied domestic treasures in Englaad during the 1+t ceatury
and were coasidered of sufficient importance to be aamed in the wills of the suvereigos aad the chief oobitity Aone, Conatess of Pembroke, for instance, in 1367, gay to her daugliter a bed, "with the furuiture of her father's arms. Edward, the Black Prioce, bequeathed to his
caufessor. Sir Robert de Walsham, a large bed of red camora, with bis arms embraidered at each corner ; while to another friend he left anoth'r bed of
powdered with blue eagles; and, in 1385 , his widow gave "to my dear son, the kiag, my new bed of red veivet, of leopards of gold, with honghs and leaves issuing out of their months," - The preat chamber was often used as a sleeping-room by aight and a reception-room hy day. Slatw, 10 his Decorations of the Madle Ages, gives receives from Cliristibe of Pisa her volume of poont The queeo is seated on a couch covered with is etuff in red and gold, and there is a lied in the room furnish.it with the eame material, to which are attached three
shields of arms. The walls of the chamber wore either hung with tapestry or painted with historical subjects. Ia the kast, the bel was ancieatly, and is still, a dirun, or broad low step around the sides of a room, like a low reclining, aad of a bed by night for sleeping, (Esud, viii. 3 shove the floor, (2 Kimgs i.4; Psalms exxxii. 3.) It wa covered very differeotly, and with more or lessornament accurdiog to the rank of the owner of the house. The poor bad but a simple mattress or sheep s-skin; or a cloak or bfanket, which also soswared to wrap, them
seives is by day, (Exood. xxii. 27 ; Deut. xxiv, 13.) Ilenc eeives is by day, ( Fixorl. xxii. 27 ; Deut, xxir, 13.) Hence
it was easy for the persons whom Jesins healed, to tak it was easy for the person whom Jesut heathed, to take
up their bed and walk, (Mark ii. 9-11) Bedsteads, how times. (See Deut. iii. 11; 1 Sam. xix. 15; Amos, vi. 4.)

The Jews only laid off their sandals and outer gnrments nt aight. - In out country, ins in Europe, the mosderis trich ors, or any nether sott unatorial, and phacen upon a raised woulen or iron framework, which is called the bectetead (Ifgyient.) F'ew jevple, perhape, sive sufficient heed to the fact, that, ont of the aliotteliterm of man's lifeThesk yeans, at least, are passed in oldivion, iu a ntate of ouconscious sleep, xtret hest lethargically is bed, not only wasting the oif of life in unproftatle repose, but ly excoss of innetion, weakening the frame, und imparr ing it for the respounible dutisa it is left to pertorm That the bel is the accessary vehicte for thet great nat ral medieine of hife - slecg, - ho one will dring. against the abuse of the bed that the rise remarker in
 courage indolent and enervating labits, and the wantun eacrifice of time to which the bed ministers trom heita made so sensually soft and tempting. Were our bed move siaply fashioned, and onale of articles more con sleep would he most materially abidged, and beneficially improved. The modern bed of lnxary is so wear in all its features to the comeli of Morplieas, an fabled by the Roman poet, that, with its doway leathers, deep nam sweeping curtuias, it semms lens the instrument to bodily rast and repose than the coorted residence of profound oblivion. As a geaeral rule, featherbeds are mare hurtful than bebeficial, by absorbing all the animal imporities grven off by tile bery ia slecp, and afterwanis re
 wro cleaned and porifiod it seems abarel that more injuriens effects are not the consequance. The bed bhonld stand with the head to the wall, in the centre of ther roum, raised two feet from the finor; the bottorn should be made of laths iostead of ticking, ns ruimitting a freer circulation ; a couple of mattresses, the top one mado of horse-lair and cotton, or wool, or instemb, what is betur, the Freneh spring mattress, will fe fonil more conducive to health and rest than a feather or down
bed. The cortains should never be close drawn round bed. The cortans should never be close drawn round the entire bed, and the top of the bed shoud be open. or be closely surrounded by curtains, Fur the invalid, nuuserons coatrivances have becn inveated, in the shape of beds in which both air and water have been employed as a sustaining medium; of the latter, one of the most nseful is made by filtog a series of eylinders of valcan ized India rubber (like bolsters) with water, and confiaing them together by cords, which, with a sheet and hanket over all, anakes a light, elastic bed, which has the advantage of accommodatiog itself to every motiou of the patient's body. -Sce Rest, and Slegr.
(Geol.) A layer; a strathan.
(Guanery.) Bee Mortar-med.
(Masonry.) The beds of a stome are the two surfaces wheh generally iotersect the face of the work in hor zontal hues, or in lines nearly so; the higher surfice is
called the upper-bed, and the lower the under-beal. 1 callen the upper-bed, and the lower the under-bet. In
the goneral run of walliag, they are the twa enrfaces the gineral run of waltar, they are the twa entaces Whach are placed levil in the buniding. - Iticylinirical whichintersect the intrados of the vanlt, in lines parallel to the axis of the cylinder. - In conical vaulting, with an horizuntal axis, they are those twe surfaces, wheth, if
produced, would intersect the axie of the cone. - The produced, would intursect the axio of the cones. - The
bed of a shete is the fower side placed is contignity with bed of a sute is the lower side placed it contignity with
the boarding or the rafters.- $\mathbf{A}$ bed-moulding is that portion of a coraice which is situated immediately below portion of a coraice whicts is situatedimmedane
the corona.
(Mech.) The fonndation, or polid and fixed part of machine upoo which the working parts are fasteded; as, "the brd of a lathe;" "the bed of an engine."
(Lato.) The channel of a stream; the part between the banks worn by the regular flow of the water. sed,

Bed of ilustice, [Fr., Lit de Justice.] (Hist.) Literally, the seat or throne upon which the king of France wat acconstomed to sit when persodully present at parlia-
ments. Froun this original meaning, the expression came, in course of time, to denote a solemn proceeding resorted to by the monarch, in order to carry some jastice was a solema ecossion of the king in the parliament, for the purpose of registering or promilgating edicts as ordinances. According to the principle of the old French constitation, the anthority of the parliament being derived entircly from the crown, ceased when the king was present ; and consequently all ordinanced enrolled at a bid of jastice were acts of the royal will, and of more anthenticity and effect that decibious of Impr-
liament. The ceremony of holding a bed of justice was liament. The ceremany of holding a bed of justice was covered; the princes of the blood-royal, the peero, and all the several chambers were present. The marshal of Frasce, tho chancellor, and aronher great ollicen chancelior, or, in his alisence, the keeper of the scals, declared the object of the session, nad the perxions enllected the opinions of the assembly, proceeding in the order of their rank; and afterwaris dechired the dintermination of the kiogs in the following words: "Le roi, en son lit de justice, a ardonnt et ordonne quit sera procite it irnrgistrement dost letres sur letquetles on at XVI., at Versaillos, on the fith of Ancurt, 178s, at the conmencement of the Frewh Revolution, and wits intender to enforee unon the parliament of Paris the vionelly proposed by Calonne, at the Assembly of No-

Saguified.)

It is then worked with the mouth, and kneaded with salivs that it may acquire the requisite drgree of dnctilfty for the construction of the comb, which is fimished with a snbstance called propotas, a glatinons or cummy. The sting is composed of three parts; pamely, the sheath. and two extrenely small and penetrating darts, each of which is furnished with several points, or barla, which, rankling in the wonnd, render the sting more painful. This instrument, however, would prove but a feeble
weapon, if the bee did not proison the wonnd. The sharppeiuted shenth lirst enters, nuld this liwiag followed hy Sometined darts, the venemonas fuid is speecdiy ind ect bebind; but the theatho of the liee invarially folhws.Having examined the bee simgly, wo now proceed to an Vquiry intoits hiditsisn momber of asociai community
 laborious, uthd distinterestem; sulyect to regulatoma, ant perfectly submissive. All its jrumisione are han opfor ing a cell, designed for the benefit of pusterity $-A$ beebive contains throe kiods of indivituals,-aŋueen, dronnew, hod workers; the quecr is is female, and not only the ruler, but in great part the mother of the commanity the drenes are males, and the workers are alurtive fimales. The sole othice of the queen uppesars to be the laying of eged, and this occopies ber atumst inersaantly as a single one only is cleposited in each ceil, thas causing her to be in contional mothn, she is slow workers io being larger, having a lunger ledy, shorter winge, und a eing larger, having al longer bocompanimed by a guird of twelve workers, an othee which is taken in torn, bot never intermitted; in whatover direction she wishes to travel, these gnarils clear the why before her, always with the ntinost coortesy turning ther faces towardd her ; and when she rests from her hators, approaching her with humility. licking her face, month, aud cyes, and appeariug to fondle her with their antenus. - The dronesirean males; they are smaller thas the queeo, bot himker hut the workers: they tive on the honey of dowera, has bring none home, and are wholly useless, except us being the fathers of they ore pratrogul by the workura. A buzzing commences in the hive, the drones and the wurkers sally forth together, grapple each other in the air, bog and scuttle for a minute, during which operation the stiugs of the workens are plunged into the sides of the dronfs, who, overpowerell by the ponson, almost mstantly dee. - The workers are the smallest bees in the bive, hal by far the moat numerons; they have a longer lip for suckiog honey than eithur of the others; their thiglis are furthished with a rush for the reception of the pulles of flowers, and their stiog is stang they boild the cells, the the hiwe and the queen, collect and store the cells, guard the five and the queen, concet kill the drones \&c. The average number of these three kiode of bees in a hive is, one queen. 2000 drones, and 20 , 600 werkers The eggz are long, slightly curved, and of a bleish colur : when laid, they are covered with a glutinous matter, which instantly dries, staching them to the bottom of the cell.- For eleveo months the queen lays only workers' eggs; afterwards, those which produce droucs; as soon at this change hiss taken place, the workers begio to construct royal cells, in which, without discoutinuing to lay the dron's' eggs, the queen d'posits here and there. abunt unce in three ditys, ab egg which is destined tew
prodnee a queen. The workers' eggs hatch in a few prodace a queen. little white nagrots, which immediately open their months to be ted; these the workers attend to with untitiog assiluity; in six daye each maggut fills ap its cell; it is then roufed in by the workers, spins a silken encoon, and becomes a chrysalis; snd on the twents-first day it comes fortb a periect bee. The drones emerge on the twenty-fifth day, and the queens on the sixtenth. - Wheo the quecu-bee has an inchinatiun to deposit her eg\%s, she goes forth, accompanmed hy are filled with honey. She is very deliberate in her moare filled with honey. She is very delliberate in her mo-
tions, and seems to proceed with great caution. She firat looks inte a cell, and if she fieds it perfectly empty, she draws up her long body, inserts her tail into the cell and depusits an egg. Ia this way she slowly proreeds till she has dropped ten or twelve cerss, when, perhaps feeliog exbrusted, she is fed ly one of the attendunt bees who have surronoded her all the time. This is done by the leee ejecting the honey from its stomach into the mouth of the queer. When this has been done, the bee gues away, and anuther takes its place. The operation of laying her eyss asain gnes on, and is succoeded by the sume mode of feediog-the atteodant hees frequently tonching the antentat of the queen with their own When the operation of layivg the eggs is completedto that part of the hive which is most filled with bees During ber progress, the surface of the comb is very ittle intruded upon, and the space seems purposely to be left unoccupied. Some few of the cells, however, in a breod-comb, are pissed over liy the queen, and after wards flled either with honey or farina. These kerve as deposits of food, from which the neighboritg birood may be fed more rearily, ns such celte are never covered with wax. - It has been already stated, that the queed for sealy a year, hays nu chas that are destinevil befial!
 ber, the hive is left withont a queen. It sometimes hap pens that she dies, or is taken away hy the owner of the ice is thken of the loss; it appeare not to be know d and the workers lator as usail. After that period, a bubbub connomenceat wark is abbandened: the whole hive is in ath nproar: every bore traverses tho hive at ravolom, and with the most evisent want of phryose: then the hees pother in cluthers of a dozen or mo, the thongh engaped io consultation, the result of which of the workers repair to the cells in which sre deponited the cegs of the workers; three of these cells are quickly
broken into one, the elges polished, and the eddes
 poin at the thot fom. with a proulinely untritive foos, called royal got is fed which, which is never ghen to any muggots, bot sturh as aro to promluce querns. Work is mow remumed sover the whole hase, and goes on as loriskly ne tedure: on tho sixtenth day the egis producen at unent whoso appearance to hailed with every demmintration of delight, anil who at once assumem endwrignty over the hive. Whan, under ordimary circomstances, $\pi$ yonng

 leaver the live, enre inlications are given of the intended movement; the workens lenve their virious oc* cryputions and collect in Erouper, espectally surar the door of the hive, rut though in consultation on the important event about to take phece- AH the summer an cances, buny quewns are hatchech, but the worknow take show them itstadt fiberty, we regening green, in which one weold the killed; the workers, therefore make a sumbl bole in the ceiling of the royal cell through which the enptive queen thrusts her turuge atd receiven food from the workers. In thts state of confincorent the young queca reignip or newly cruated oneen, finds ente of theser cal
 stroy her rival. To prevent thie, the workers often in terpose, pullitig her away by the legs und winge: to thin she submuts for a short time, whon, uttering a peculiar cry. called her veace of soverejgety, she comanads fit stant attention nod ubedience, und is at once frecd rom her assainnts. The coecons spuo by the bugrots of the workefs nud drones completely eavelop the chiry salis; Dut that efrun by the nukgot of the queern njpears imperlect, cosering only the therer are thas de sigoedly expesed to the nttacks of other queom, am their destrustion, lefore emergimg, facilitated. IW hen the chrysalis of the queen is adout to change to n per fect insect, tho bees make the crver of the eell thinuer by cuawing away part of the wax; and with su much picety do they perform this operation, that the cose at last becomes pellucid, ciwing to its ustreme thimnesm, -The combs of a bee-hive comprise a coligerine of hexagonal cells, buit by the beles ns a recoptacle for honcy, and for the oimseries of their young , ach combly in a bive is composed of two ramges of cestwen this agrinst each othell is se disposed as to form a pyradonble row of cetis he se disposeach. There is a contimoul series of these dooble comble in every well-filled bive-the spaces between them being just sufficient to sllow two bees, one on the surface of each comb, to Juns withont touching. Each cell is hexagonal, the eix xider being perfectly equal. This figure ensures the sreatest possible economy of material him fince; the outer tiged of the celle are slightly thickened, in order to gian strength: the satose part is to cover wion acaum saroish, which is suppused to give eddntioda going on The construction of severancors is pundation of ene at the sume fiow rows of calls attached to it, than a seclad, and a third we fomaded on wach side. parallel to the first, and so on till the hive is filled - the comben which wera comuenced first buin always in the most ndwanced state, and therefore the first completed. The disign of every comb is sketched ont, now the first rudmments laid by a single bee. This fonndress-hee forms a block out of a rong mass of wiax, drawn partiy from ita own resources. but principally from thuse of other bees, which furnish wax from small sacs. in whichtor of secreted, body of the bee; taking ou we plase fore-feet to their mond-the whure it moise masticated, und renderel soft und ductile. The fonndresb-liee determines the relatire position of the combe and their distance from earth other, the fundations which ahe marks octving us guides to the nltwrior habrers of the wax-whrking bees, and of those who build the celle, hiving them the ind vantage of the margins and anglow already formed. The biass of wax prepared by the assiatante is ryplied by the foundress-bee to the roof or bothom of the hive, ant thus a slightly double convex nase is brmed; when of sufficient aize. a call the bees, who relieve orc noother coll, two others are back, and on each side of this find cthis proceedang the foundations of two cells sre lati, the line betwixt thin corresponding with the centre of the opposite cells. A the comb extends, the firnt excnvations are rendered deeper and bronder: and when a pyramidal hase is fituishod. the bees bnild up walls from its edges, bo ar to contplete what ony be called the prinnatic part of the cell. The cells intomed for the drobes are consumpsing larger and mortsins butmernemely, they obwally appent and buing furmed solnppyenty, they of ala are luite the royal cells for the quewns. Of these there are nusu ally three or funr, sonnctimes tor or twelve io a hive, thathed comphetely th the central part. bat of the ruya colls is tu the erge of tre com, tapering gradually down warde and having the exterior full of hulen. The menth of the cell, which is alwuys at the hottom, remaias upt

## BEEM

uolil the maggot is ready for transformation, and it is the closid like the rest. When the queen has emerged,
the cell in which she wiss reared is destroyed, and its place is supplied by a range of common cells. The gite of this range may be a/ways traced by that part kind of knot. The common breeding-cells of drones and workers are occasioDally made the deposituries of honey; but the celle are never sufficientiy cleansed to preserve the boney undeteriorated. The finest honey is stored in now cells constructed for the purpose of receiving it, their form precisely resemblitg that of the common breeding-cells. These honey-cells vary in size, being larger or smaller accoriling to the productiveness
of the sources from which the bees are collecting, and of the sources from which the bees are collecting, und

man seem to loce a part of their natural gagacity. In man seem those countries where the been are wild, and uoprotected by man, they are always sure to build their waxes cells in the hollows of trees; but with us they appear improvident in their choice, and the first greea branch which atops their flight, is deemed sufficient for their he place where they are to alight ; for aumbers of the swarms, when they conceive a predilection tor any particular branch, spontaveously settle on it; others follow their example, and at last the queen herself, finding the majority of the swarm convened together, conde-
ecends to placs herself among them. The queen being ecends to placs herself among them. The queen being
settled, the rest of the swarm soon flock aronnd ber, and in about a quarter of an bour the whole botly seems to be perfectly at rest. When a hive sends out several owarms in a year, the first is always the best, as well as the must numerous; for, having the greatest part of the summer bcfore them, they bave the more time for anaking wax and honey, and consequently their labors are the most valuable to their proprictor. Though the warm is priacipally made up of the younger bees, those of all ages generally compose the nuuber of enigrants and as a eingle hive sometimes contaios upwards of 0,000 tohabitants, euch a vast body may well be supposed to work with great expedition. - Much might be sudy of the bee. We have in this article eudeawored point out those features of their acoial life that are geverally accepted by authority, settiog aside other and even marvellous facts, which do not appear however o be based on sufficient evidence. As regaris the domestic management of bees, we refer to the excellent artiele on this subject, found la Mackenzie's Book of Recripts in Useful and Domestic Arts, published by $\mathbf{T}$ Kll wood Zell, Phtladelphia, 1867 ,

there is sufficjent to cover the grain. The barley then there is sufficient to cuver the grain. The barley then1
abserbs the water, and swells up; the anount of water abserbed showing the excellence of the barley. Att-r remaioing in the trouzth for about forty hours, the
water is drained off, and the grain is thrown out on the water is drained off, and the grain is thrown out on the
floor. twenty-six hours, Daring this time more of the super floons water drains away, and the grain rises about ten degrees in temperature. This is caused by the nucipient germination of the barley. A primitive stem and little rootlets besin to appear. This process is technically called sweating; and as eoon as the temperature rises
high enough. the partial germination is stopped by u process called floming. The warm grain is sproad aiong and returned with spades over a larger sp.tee, until the and returued with spades over a larger sp.ce, until the
layer is ooly six incles deep. After undergoing this process, in which the rudictes attain thir grates
leagth, the grain is removed to a drying-kilo, inal submitted to various degrees of heat, nccording to the quality of malt required. During the heating, the cornings, or shoots, drop off; they are afterwards separated from the grain by wire sieves. (See Mul.) The differ ent varieties of malt, known uoder the names of pale,
amher, sad brown, cau be produced from the same kind of barley by varying the beat of the drying-kiln. Pale of barley by varyang the hent of the dying-hin. Pade
malt is producedat the preper temperature; amber malt is slightly scorched; aud brown matt is scorched to the is slig extent that the kiln will permit. Pase, umber, or brown matt is beeected according as the beer is to be
pale ale, brown ale, or porter. Before $\bar{i} 700$ the orslinary malt liqnors in London were ale, beer, and twopenny It was as conmon custom to call for a tankard of liree $t$ lireails, - meaniog no equal mixture of three kinds of
nialt liquor. This was very troublesome to the publicau mialt liquor. This was very troublesome to the publicau;
and a brewer named Harwoed invented a beverage and a brewer named Harwood invented a beveraye
which united the flavors of beer, ale, and twopeny. It was called entire, or the entire but: nud ors it was a healthy, nourishing liqhor, very buitable for porters and
workigig-men, it received the name of porter. In brewing, the malt undergoes six processes: 1. the grinum : ing of the worts with hops ; 4. the coolioy; 5 , the fer menting; 6 . the clearing, storing, \&c. In the first proWhen grouod into fine powder, it is liable to coagulate into heaps, while undergoieg the secoud operation,
namely, the mashing with hot water. This is couducted namely, the mashing with bot water. This is cotuducted
in a large receiver, called a mash-tun, made with wooden in a large receiver, catled s masu-tun, manderted to $160^{\circ}$
staves and hoops. Water previonsly heate Fabr. in a copper, is run into this mast-tun, and the absorb the whole of the water, when thorongbly atirred up, either with. long poles or with stirrers worked by machinery. Diastase, which was slightly formed duriog the process of fermentation, is at this period of the progrsin is developed, and the starch eongar. As the temperature of the water falls to $1+0^{\circ}$ Yahr, a fresh
gupply of water, at $190^{\circ}$ Fahr, is added to the mixture; Rupply of water, at $190^{\circ}$ Fahr,, is added to the mixture,
after remaining from two to three hours on the mait, the water, wEich assumes a very sweet tast-, is run off into a vessel called an underback. This runwing is termed the first mash, and the tun is filled up with a
fresh supply of hot water, called the second masil; thes Tresh supply or hot water, called the second mash; thes
two mashes are afterw.rds run together. The mixed thuids in the uudertack are called the sweet worts. In fluids in the underuack are called beer, it is necessary that the brewer showd prepare hie worts in a regulicr mannue. The quantity of saccharine matter present is
ascertuined by means of an instrument called a sacclinroneter, similar in principle to the hydromet-r. (Sve
SacchimoyETER.) When the sweet worts are reduced th Saccharometer.) When the sweet worts are reduced th the proper strength, they sre pumped up frou the un-
derlack into a covered hoiler, when they are boiled for some time, together with a certain quantity of hops. Some time, together with a certain quanity of hops
When the boiling is complete, the hops are drained off and the boiled wort is set to cool in large shallow pans nr vats, and is then ready for fermentation. For this purpose, the wort is run iuto fermenting-as, a cert.io proceeded sufficieutly far. it is stopped ty skimming off the surface fruth, until the beer stups working. The
beer is now run into vats. or caskell into cashs, and nothing remains to conplete the operation but the fining process, which is effected by adding to the beer a solu

Begluards, Begwarils. (beg'hards,) n. pl. (Eccl. Hist.) A term applied to several religions orders, as well ar heretics, during the Middle Ages. It was prowably first used to descrive those banf monke of the third who arese in the 111 h century. mnst not be confonnded with the later sectaries, a branch of the Fraticelli, condemned by the 15 th General Council, thet of Vienna, 1311-1312. This mistake was so often masdeat the time that Pope John XXI. or XXII., by in decretal, declared the last-mentioned to be execrable impustors, and in no way connected with the $B$. of the third order of St. Fritncis. Mosheim shows the name is derived from the Old German word beggen, or beggeren, to beg, with the word hard snibjoined; that it eignified,
to beg earnestly and heartily; and he acconuts by this to beg earnestly and heartily; and he acconnts by this
derivation for the indiscriminate manuer in which it derivation for the indiscriminate manuer in which is
was applied to 60 many ordere and eccts. The subject is involved in inextricable confusion from the many conflicting sccounts of different anthorities. The B. disappeared hhout the end of the $1+$ th century
Baginar inti. or Baom m, in Ceatral Africh, a country
dinited from the kingdom of Bornou in the $W$. by the Shari or Grand River, and boinded on the N. by Lake Tsad, and on the E. Ly the Waday kingdom. It extends sonthward to about $10^{\circ} \mathrm{N}$. Its greatest length is nbout 240 m .; brendth 150 ; and general elevation about 1,000 feet above the sea. Rivers, Bénuwé, Logon, and Shari. According to Dr. Barth's Travels in Central Africa, the eoil, partiy compased of saed, and partly of lime, produces the grains and fruit common to that region. The hus been introduced among them. They are physically hus been introduced among them. They are physically pecislly hadsome. The sultan, tributary of the kingpecisliy haddsome. The suitan, tributary of the king Mesna. Pup. about $1.500,000$.
Berild', v. a. To overlay with gold or gilding. Bexin', v. i. (imp. Began : $m p$. beoun.) [A. S. gynnan, aginaan, nid beginnan, from the root gin, gen, or gin;

(Theol.) That state of miod in which one acqniesces in the world who believere is ansthing, evea the noos superstitions idea that ever fonod credence, does 60 be cause be has some kind of a yague perception that the object of his belief is real and true. But the nct of be lief itself has puzzled the wise, thronghont all ages, exactly to describe its character. One mas ullege6 the set is intellectual, another saye it is moral, a third
aftrms that it is emotional, sod a forrth, who io likely aftrms that it ie emotional, sod a forrth, who is likely as near tho truth as any of the previnos three. gvers that it bears all those various churacters at different times, and when arplied to diffireot sobjects. First it is intellectual, then it is moral, whon it is emotimnal of instinct or of intuition. The reason of this appareat obscurity in the meaning of this word, is, because meo have no more general term that they, are accuntoned to apply to the same object. It is, accordiogly, ianpossible to get belind belief, so as intelligibly to drseribe its charactur. It is emplatically "the light of all our seeing." There are, properly, tonr sonrces from which the sommel beliefs of men are made up:-lst, there is inthition or instioct ; 21, there is our ordinary experience: 3d, thare are our scieatific convictions, derived from the exurcise of the two sonrces of koowlelge. deduction tute the sonrces of our real convictions: hut feeling and imarination have a grent share in civing rise to illusery potions and superstitoons beliefs in the minds of men Min is responsible for every belief, real or illnsor whicl he maintains, provided, always, it were ponsible for hin to discipline himself properly in the varions kinds of knowledge, in which be exercises his beliefs. This arises from the fact that we all have power ind our minde in directing them to one object or annther of study; and if this art, which is admitted on all hands to be voluntary, he really 80 , for every voluntaryact we commit, either directly or indirectly, we are entirely tion with the conscience, but it is not, therefore, wholly
rusille.
Believ'able, $a$. That may be believed; credille.
assente, (tr-iev, )r. a. Tu give helief or credit to; to persuaded of; to deem to be true; to put confidence in. nasion of anything; to confide. (Sometimes fullowed by the partiele in or cm .)

Now God be prais'd, that to brlieting sonls, "- Shake.

belt.] A leathern girdle; a band; a circlet or bandage

-Aoything resembliag a belt, which cunfines or girds.
(Arch.) A string-course and blocking-course: a conrse of stones jrojecting from a wall, either monlded, plait fluted, or enriched.
(Astron.) The dark stripes or zones that appear oe
the surface of the planet Jupiter paraliel to its equatur (See JuFiter.) Orion's Belt is figured by three stars in a direct line with each other, bituated horizontally in the centre of the constelfation.
(Surg.)- A broad bandage applied to the abdomen, so as tw oupport and make methodical pressure upow it. (Nech.) A band which, hy wheels and pulleys, connect
the differeut rotatory parts of machinery. It is peuer the differeut rotatory
ally made of Jeather.
(Her.) A badge or mark of the knigbtly order. - Bu
( Furriery.) A disease in sheep. - Crabb.
a. To gird or eacomass, as with a belt; to encircle. Beited with young children:- De Quincy.
-To shear, as the buttocks and tails of sheep. - Halliwell Belf, $n$. (Geog.) The audue given to two of the three stiuts by whels are distinguished by the addition of Great an Littie.-The Great Belt, which is the middle one, and the widest outlet for the waters of the Baltic, begins on the island of Langeland and the W. shores of Latand, and turminates on the N. between Rees Ness ou the islind of Zualand, and the S. extremity of Samsoe. 1ts length nay be about 70 m. - The marrowest part of the strat 1 into two straits by the island of Lamgelatid; for the nat row sea between that island and those of Arroe, Tuasiug Bult, aded is hardly more than four miles in brealth. The primeipal bratuch between Lapgeland and Laaland is rather arore than 8 m . wide. To the N . of the northeri extremity of Lang land the breadth of the strait varie betwen 16 and 24 m .-Except near the shares, the depth of the water is considerable bet very irregular, varyibs from tive to twenty five fithoms. But some sumall ath Low islands and nany shoals renter the natigation difticult and dangerons, and oo that ateconnt the passage of the sonnd is preartrea. Between Nybory in fomat and Corsuer in zealand, a regular comanication is estatifished by steamboats and sbackis. In the good season
the passane is pot difficuit; but io the Jatter purt of the antuma aud io winter it is dificuls and dankerons, es pectially on account of the pieces of fluating ice which pecially on accuant of the piecs of forating vere wenther becone very numerous, and are sometimes cemeoted tugether by hard frost. It is then sume times neeessary to make one part of the paneage in a sledge and the other in a boat. When, in soch circum stances, soow begins to fall, the small island of Sprogue, which lew in the strait, hot considerably pearer to the coast of Fionis than to that of Zealand, offers a place of refuge. - The Lilule Belt, the most western of the three etrans, begina on the s between the iskond of Arroe an land, to the capes called Oger Ness on Fionia, and Biland, to the capics called Oger Ness on Fionia, and Bi and its width varies from 8 to 10 . Towards the 8 , extremity, betwren the islands Arroe and Alsm, it is generally aluve 10 m . ne ross. At Assens, a town of Fionin, it narrows sudtenly to about five, and farther nurth it grows by degreess narrower, so that between the town of Middelfart un Yionia, and the opposite coast at suoghoe. the distance hardly amuante to $3 / 4$ of a m . The depth
of the water is considorable, varying from five to fimrof the water is considerable, varying from five to finirteen fathoms; but the naxisation is dabgerons, on the count of the low iskands (Arree, Ratagee, and Fance), the nimerous mhouls, and the violent currents which con-

Berlia, Treaty of (Euro, pol. 1 The nanm given
Berlin. Treaty of, (Euro, pol, The namu, givon to
a treaty coucladed at Berlin, July 13th, 1אi, After a treaty coucladed at Berlin, July 13th, 1sis. Afte a treaty had been made in Felo., 1sis, between thay two powers at San Stephano. This creaty proving no-
satislactory to soore of the European powers, notably satislactory to soone of the European powers, notably
80 to Great Britaio, a Cobgress wis called it Burlin, represeoted by Geronay, England, Ruskia, Anstria, Fraoce, Italy, and Turkey, and presited over by Prince Bismarck. By this inportant Congress the followny partiai partition and rectilication of the boundaries of
Turkey were decided upon, viz.: BULOARAA " is coustiTuted ao autonomic tributary principality, under the Suzerainty of the Sultan, with n Christian government and a bational militia. The principality is limited on population, confirmed by the Porte and the Earnmean powers. The phan to be prepared by an Asseably of Nobles, coovoked at Tirnosa-" Fuli religious liberty is to be enjoyed, and Bulgaria to bear a purt of the public deht of the empire. "South of the Bulkins there
ehall be formied the proviace of EAsTEAN Roumelis, under the direct political authority of the Sultan, baving administrative autonomy and a Christian governorgeneral" oppointed by the Porte, with the assent of
the powers. Full religious liberty is to be enjoyed. "Bosmia and Herzeoovina to be occupied and aulminis. tered by Anstro-Hungary, with the exception of the Saodjak of Novi-Bazar." Spizza is incorporated with Dalmatia. "The independeace of Moxtexearo is recugnized, and Autivari to be aonexed thereto," but to be
cloed to war-ships of all nations. M. is to bave no closed to war-ships of all nations. M. is to bave oo her werchatet flag. Mooteoegro shall bear a portion of the Turkish national debt. "The independence of
SEarls is recognized," full religious liberty enjoyed, Seanis is recognized, "" full religious liberty enjoyed,
and she to bear-a share of the public debt of Turkey. and she to bear-a share of the public debt of Turkey. Bupanid "ie recognized as independent," und inll repart of Bessas abis containipg abt 2,510 sq . m . taken part of Bessasabia, contaibidg abt. 2,500 sq. M., taken Dobrudscha and also the territory sonth, is far us a tive tartiog east of Silistria and joining the Black Sea south of Mangalia; exact lines of bonodary tu be fixed by a European commission. The fortifications on the Dauube from the Iroo Gates to its mouth to be razed, and no ships of war shall oavigate the Dannbe downwards from the Iron Gates. In all parts of Trakey full religions liberty is to be enjoyed; and in 00 part of the
empire shall differences of religion be motive for unfitempire shall differesces of religion be motive for unfitness io aoything pertainiog to civil and political rights.
Aadahan, Kabs, and Bateum are ceded to Bussia, the Aadahan, Kass, and Batouns are ceded to Bussia, the
latter to be a commercisl port onty. The island of Cypros is ceded to Great Britain, and for which she agrees to pay to Turkey a stipulated enm anomully, and Great Britain, ander treaty made with Turkey, June 4 th, 1818 , engages to defend the Asistic dominions of the Sultano agaiost any fortber attack: Thile the Sultan is to introdnce vecessary reformes, to be agreed upon between the two powers. Io accordance with a protocol to the Berlia treaty, a rectification of the froatier is to be msde between Turkey and Greece. Upon tbe authority of Lord Beacoasfield, Turkey, excluding Bosnia and Bulgaria, retaias in Europe 6i,000 $89 . \mathrm{ma}$. of territory, which is lees than sbe would bave lost by the treaty of San Stephaoo. The latter provided for a territorial exteosion of Bulgaria nearly three times greater that the Berin treaty, with other area lost to Turkey by the treaty of Berlin. amouots to abuat 71,000 miles of territory. See Le Truitt de B., annote et commentc, par B. Brunswik. Paris, 1879 . Berlioz, (bair'k-oz,) Hector, a Freoch misical comduced many eymphonies sud operas, respecting the merits of which there has beed ouch differeoce ot opinion. Some bave thought them extravagant in character, while Liszt was of upinion that they possessed high merit, and Psganinit testified his sense of B, s penios iny preseotigg him with an order on hins Hisnker fory wrink, principally Les Sairés de l Orchestre, eviace a thoruagh erine (burm) the vast. Fort) A ledse or pathway, from 3 to 8 feet in width, at the bottom of the outside of a rampart, where it joins the scarp or inner side of the ditch. It is almost on a level with the pataral surface of the ground; asd serves in part as a passage-way for the troops of the garrison, and in part as a means uf pre-
venting the ditch from being filled with earth and rabbish, wheo the rampart is batterell hy the besiegers. paoiculate racemes. - Four species are cultivated as paoiculate racemes, - Four species are cultivated as onrselved with the former. 1. Beta vulgaris (Common beet) is said to be fonnd in in wild state in S. Europe; it is however chiefly known as a plant cultivated in gardens, for its carrot-like sweet and teader roots. Seversl eorts are mentioned, varying in the size, form, color, and oweetness of their roots: of these, however, two are much more worth cultivatiag than the others, mamely, the small red and lang yollow varieties: they are the most delicate, the sweetest, and bave the richest color
winea served at table. Beet-roots can omly be ohtained in perfection in a rich, light, sandy soil, through which in perfection in a rich, the roots become forked, and are deprived of their succuleoce. The seeds are sowning of March or beginning of April, and are to be wall ead of March or begianing of Apri, and are to the with soil; the planats are to be thinaed to the distance of a foot apart : in Sept., the roots may be takeu op, and slould be packed in sand. in some dry place out of the reach of frost. In this conntry, beet is chiefly employed as an ingrediest io sulads.-2. Bela altiseimu (hangel-wurzel) is a much larger aod coarser phat toct. from which it is principally koowo by ita common bect. from which it is principataly anarked inturaally with zones of red ani piak or white. Its native comintry is naknown: ly but this is searcely probatile, considering that it is per manently reproduced from seed. Manyel-wurzel is au object of extensive cultivation for feeding cattle:
leaves affurd a vers nutritious food for all kiods of livstock, and the roots, from their extreme sweetness, are
by many farmers consillered tho most valuahlo of all the Gricultural plants upon which catsle are fed in winte They, luwever, reynire to loe preserved from frost, an wo berter adhited to warm clitmentes and a light rich "urzel, it will be fotund dvant.ggeons to noak the are juat legmange to germinate, and then to now them, taking care that they arr- speedily covered with soil: for, from geeds, it will often thap pen that they will lie efore they begin the grow by which valuathe tinit in lost; or that they will
fisil altogether, expecinlly if the weather should be dry, as it often is at
the time of suwasg. wlich the time of suwing, which

Fig. 348, - beet-root. Bete cyela (C'bard-bect) is inferior to the two lant in of the rilse of its leaves, which are white, yellow, preen orangescolored, or thes, whimson, in differcut yarietien it is cultivated like the comman bect, lut the leater only are used in sumps, or their rilss are cut ont and tewed like sea-kail. They hatve however an earthy taste, which it is not in the power of couknry wholly to retuove, on which account they aro little esteemed. The Frethch call this suceies Potréc ce cardex; it is said to have been introduced into France from Portugal; hat its native station is unknown. - 4. Beta noritima (Seabest), unlike the three lust, is a prostrate phat, with It is a comanon European shoreplnat. preferring chatky soil. 1to leaved are small, ovate. derp green crenelled. rather shorp-pointed, flat. sucenlent, hud phaced on long stalks. Its flowers are green and ar ranged in spikes, each being subterded hy a somall leaf fract. It is a pereunial, and one of the most valuable plants known as a sulastituto for spionch: its leave when dressed are extremely delicate and well-finvored and easily reduced into that pulpy substanee which contitetes the great merit of good spinach. It thrives in gardes without any sort of cure, untis nather a hathdeom plant wher growing among rubbish, for its leaves ar ed by the sun, or to he injured much liy insects. It increased ly seeds, which it yields in abwudance. - The oeet, prineipally B. vulgaris, yiclds sugar equal to that esteented for the kitchen, and the greea-leaved for ex It a lirges scale in many part: of the wortd; and it is believed that npwarils of $410,000,000$ llos. of theet-root sugar are anoually produced in Enrope, and chiefly in France. The cultivation of the $\boldsymbol{B}$. for sugar porposes should be of great importance in our conotry. us evi-
denced by the hagh priees of angar-cane since the turindenced by the hagh prices of sngar-cabe since the Lescinning of the Culaas war. This interestiog matter will be

played with three only, and generally on $B$. withont pock ame is played with fonr bails-two white une red and one pink. I1. At the commencement of the game, the red ball is placed on the Pyramid spot, in the ceatre of the upper half of the table, and the pink in a simila position at the lower or buulk ead; the pink ball is con sidered in bank, and therefore cannot be played at when ir as the pink ball and a ball is hand may be playe rom any part within that line. IV. The pleyere at tarting, string firr the lead, the winner having choice f. The player who leads must give a milss (which doe not count) any where behind the red ball; or, failing to cave it behind, he has the option of puttiog it on the "winning and losing" spot. VI. The 2 d player must then either play at the white ball, or give a mass, which does count; and should he first strike either of the colored lails, his opponent may either pave the game played
over again, or scors a miss. VII. The game is scored from Cannons (commonly called carroms in America) rom Canbons (commonly called carroms in America) the player making them, with the loss of auy llazin he player math.ing ; L, with the loss of any Hazar CIII. Points. For every White Winning llazard the striker scorce two points; for every Red or Piak Winning Huzard, three points; for every Cannon off the white to a colored ball, or from a colored ball to a whit one, two poriats ; for every Cannon from one colored lail to the other, thrce points. 1X. Penalties. The player oses two points if be make a losing hazard off the white, and threc points if he make it off either of th colored balls. X. If the player make a Cannon off the white, and afterwards pocket his own bull, he hases two points; but if he hrst strike a colored bail aree points, XI The pocket his own ball, he lose trokes. If a foul stroke be made, the latls remain a hey have ron, and are not placed on tho spot and hey have ron, and are not placed on the spot and gores in and tukes advantage of whatever Hazard of cinnon may be lift. XII. If the striker's ball tonch another, he camnot scors. XIII. The player loses one point for every miss (except the first as explaioed in Law 6.), and thrie points for every coup, or for forcin his ball off the table, either with or withont first strik ing a ball. XLV. The colored halls, after leing pocketed must be placed on their respective spots, as it thi beginning of the game; bat io case either spot is ocet pied, then spotted. XV. In games of t or 6 players, each partner may adrise the other: but be must but wow his ball, or place his ene. XVI. All disputes nunst be decided by the marker, or by the majurity of the conpany, if the marker be interested in the game either as daver or bettur
3ill'ins, $n$. Act of joining bills, or caressing.

infinitely superior to that of other animals, and, indoed, is indispeusably necessiry to their support and secarity. Were the eye less prifect, the $B_{\text {. from the rapidity }}$ of ita motion, wonld prolnably strake against almost every
olject in its way, ns well is be tutally incapable of dis olject in its way, as well as be tutally incapable of discerniag its proper loud whensorring in its owin element In mental capacity, $B$. iully equal quadrupeds, und in
some respects surpass them. Parrots, starlings, \& $c$, retain in menory many words and fhrases whith they have leen titught, and masy singing-birds whole melo dies. Their puwers of meniory been nlso to le evinced by the fact that lirde of passage, atter an abeence of six months, or even a longer tidie, and after travelling thonsauds of miles, teturn to their former home: the ewallow to her leenn, the finch to the tree where last year she reased her young, or where she hereelf was hatched. The difference letwern such B, at love to dwell in uninhatited places, secnre from persecntion. and such as are firand in the neiphhorhood of mata, surrounded ly dangers, is a prouf that their pradewce, cno Ding, and docility can be awnkend abd improsed. The part of $B$, are distinguished from all the reot of the abimal world. The wind-pipe of $B$. je compuncd of entire riuss of cartilage, with an exception in the cuse of the ostrich. At its bifurcation is a glottis supplied with uppropriate muscles, called the lower or inferior laryux. It is here that the voice of birds is formed; the vast body of air contained in the air-cells contributes to the force, and the wibd-pipe, by its form and movements, to the modificution, of the voice. The superior laryax is very simple and onimportant. The gitt of song is given to the inale hirds only, and their nutes are mostly an expresion of love. Whey sing only when hey Hre disorilere, they are sileut To no other animat huse disorbers, they are virions fones beth to no orher anilnat have different feelings: homger, fear, the dread of immiment danger, desire for mociety, or longing for his mate, love melanchady. \&e., are expressed hoy a variety of nutes, which make a language intelligibite not only to 13 . of the same apecies, but often to the other tribes. - B. may be distimguisthed, tike qusdrupeds, into two kinds or classus-gramin rous ani carmivorouf; like quadrupeds,
too, there ure some thit hold a middle nature, and partoo, there ure some that hold a middle nature, and partaku of luth. Granivorons $B$, are furnished with larger intestines, and propartionally lonser, than these of the variuns burts, is conveyed whole and entire into the first stomich or craw, where it undergons a partial dilation by in lignor secreted from the glinads and spread over its surface; it is then recefved into natheres species of stomatb, wbere it is further diluted; after which it is transmitted into the gizzard or true stomach, consisting of two very strong mascles, covered extermally with a tundinous sulstance, and lined with a thick membrine of prodigious power and strength; in this place the food is completely triturated and renilered fit for the operation of the gastric juices. Carnivorous $B$. are distinguished by thuse eblowments and the purpuse of procoriug their foud: they are pro The phrpuse of procuring their foud: they are provided with wings of great length, the manded which
move them being proportionally large and strong move them being proportionally large and strong,
whereby they aro conalud to kenp long upan the wing in search of their prey; they are armed with etrong, hooked bilts, and sharp nud formidable claws; thry lave tho large heads, sturt netke, strong and brawny thighs, uad a sight ao acute and piorcing, as to enable them to virw their prey from the greatest heighte in the nir ugon which they dart with incunceivable owifthess and ondirviting nim. The analugy between the stictoro of rapaumas birds and earnivorous quatripeds is ubrions: loth of them hre provided with weapens whichithunt nnsocial; and they weldom live together in flucke, like the inutfensive grapiyomens trilueg When pot on the wims, ralsacuolls biiris rutire to the tons of sequed tured rockik, or to the depthe of extensive forents, where bey vosend themselyes in sullen and gloomy solitude. -Every form which the most lively finey could crente, and every hae that the imuginution conld conceive, are to the fontid in the fonthers of birds. Two changeanerur in the fouthers, - ond its the spring nod another ith the antumin. In the formar case the change ocrurn just be fore the lirecting-time, and the 13 . gains m mamber of new fenthers without losing the ald vous. In the latter, or moniting keuson, the old feathers fall off und new stronger than thome on other jarte of tho bomp. They stronger than those on onded wing-feathers, quilli-futhers, or quilis. At the hase of each quill aro small festhers called wing coverts. The tail-keathors are himplorivided ritheal pla arage th their tals; and the feathers often take wher remarkatile forms in nifferent parts of the baty ; math in shouldur-tufte, ruffs, cresty, \&c. ## BIRD

BIRD
BIRM
astrich allows her eggs to be hatched hy the heat of the san in warm climates; but she sits and liroods over then when the temperature is coldur. B. generally brood once in the year, but some broud twice: and the number of eggs they lay varies from one to twenty. The cuckoo and a smatl number of other $B$. lay their vger in
the nests of other birds, is order to be hatched liy them the nests several lirds are able to run about and find fom as scen as they leave the nest, while others remain in the pest for days and weeks before they cae venture out luring this perind the parent birds bnd food for them At the breeding-sensm, lirds are offen gregarions, ant ametimes live together in one large nest. Biruls'-nest are constructed with such delicate and exquisite at and ingennity, as to call forth the rdiniration of every ol server. Birds of the sume species. wheruver they may be fow, the same munner. The situation they birials the materials they use, and the furm in which the fect. the materians they use, and the formerticular tatur and necessitics of the bird. They are generally linel with moss, wool, fine hair, or down, and have an ext rior composed of straws, twiss or routs, and dry Eras. mixed with clay. Birds that build early in the spring such as the blackhird and tbrush, libe their nests with loam, io order to keep ont the cold air. The common sparrow, wha buitds fonr or five nests in the year, is not particular as to the situation he chnoses. Sometimes h locates himself in ivy, sometimes in trees and hedres fully concenl their nesta, and some leave them open are mpparent; some like the Jay, build them so loosily that appareat, some, seen throngh the twiga: und others ver compactly, such as the gollea-crestent Wrtn, which con structs its nest with small picces of mass and spiders web iuterweaved. It is nearly an inch in thickness, an is lined with a profusion of soft downy fenthers. A very curious nest is that of the Tailor-hiril. (Sylvia sutoria. It is for the most part composed of two leaves, one of
them being dead; the latter is fived hy tho ingenions them being dead; the latter is fixed hy the ingenion bird to the living leaf as it loangs from the t ing both together, like a ponch or purse; this is opear

suspended from the branch, so as almost to gecure it from the aftacks of reptites and mankeys. Whil haching, all where their partienlar ford is plentiful, and wher there is an ahundaoce of the proper material with which to construct their nests, seme wate-fowls plack the
dowo from their own breasts, in urder to line thei dwellings; but they usually funidd to ont-of-the-way places, since their tood is nut tbat which is gathered b ordnary birds, While hatching, the fumale bird is re gius to sit: but before the egiss are hatched she is al most reduced to a skeleton. Neither honger nor danger will make her leave her post of daty: lut if, after beine sbsent, the male and female hirds perceive that theif nest has been meddred with, they will often leave, ind buld in a securer place. After the young are thedged and flown, the nest is generally deserted. Many smail remarked, "that a siogle pair of sparrows, druring the time they are feeding their young, will d'struy ahont $4,0 r 0$ caterpiliars weekly; they likewise feed their young with butterffies and other winged iasects, each of which if not destroyed in this manner, wonld be productive many thousands of caterpillars," The sparrous would seem to show the reverse. While monlting wr changing their feathers, many birds ture sid.kly, antl often die.
Every conntry atd climate have birds, which are pecuEvery conntry and climate have birik, which are pechliar to them; but many migrate to diotunt lands when the season becomes too serere for them. Surar the equa-
tor the birds are remark, ble for their brilliant and varied plumage: but their voices are ukully larsh and ried plumage: but their lot. In the frigid zone, where fisb ure plentifal,
they are moatly nquatic, and their plumnge conaists of koff, warn, downy testhens. In all combtrice, hirids live longer, conpuratively, than elther men or yualrajeste in the same places Many kinds of birus are important in
an economikal sutise. A large protit is derived from the an economicnilsuse. A lurge protit is derived from the
rearing of domeatic fiow la; and the thesh and eggs of most tionds can le vaten. The theah of tisheraterg birdit and birls of prey is consedered umplewsant. Fenthers are enpluyed in innyy netul athd ormamental wayn, and the dung in birile is useful tor manter, - The longevity of birds is regarded no nowt ten tmaes en grent as the perind which they reyuire to come to matarity or fall growth. Domestic low le live to the are of twaty yeam:
parruts, thirty pors; geese, fity: while swans, ravobs
 comprises fols ity of their structure. Their distimeuishing cluaracter as being in relation with their rostime, have betn taken chictly from the conlormation of the bill und legn, Cn sier divided them into nix ordere, - namely, Lepacions D, Fusseratis, rambers, Gultanuccous 2., Waders, ath Tompoles, We follow kenernlly, in the work, the whit B. anto i urd As: Raptores or Rurenous, (correspondms to the ord. deocy. It has long beed a great question in the Christinu Church, what kind of superiotendeocy it was that originally belonged the B. Thisulestioc, an to wliether it was origiually as superiuteudency of pastors or of people, may be briefly stated thus:- Those who maintaio bishops that they ure an order of ministers io the Cluristian Church distinct from the order of preslayters, and standior in the same bigh relation to them that the apustles did to the ordinary ministers is the Charch; that, in short. they are the successors and representatives of the apusties, aod receive at their consecration certain epiritual graces by devolution and transmission from them, whict belong not to the common preshyters. This is the view taken of the original institution and charater or the B. iu the Catholic Church, in the Eug. lish Protestant Church, and we believe in all churches which are frumed on an episcopal constitution. Epis-
copacy is thus regarded as of divine iostitution, inasmuch is it is the appointment of Jesis Christ and the mpostles, acting in uffairs of the Clurch wader a dision direction. There are, on the other luad, many pervone who contend that the superintendeacy of the $\boldsymbol{B}$. was origioally in purespect different frotn the superintemdency exurcised by presbyters as pastors of particular charches. They maintaiu that, if the question is referred to Scripture, we there find that bishnip and presbyter are ased indifferently to indicate the kuuse persone or class of persurs: and that there is no trace io the Soriptures of two dietinct orders of pastors; and that, if the reference is made to Christian antiguity, we find no trace of such a distiuction till about 200 years after the
time of the apostles. The node of appojnusent to bishoprics varies in the different chprches. In early times oprics varies in the different charches. In early times
the $B$. was generally elected by his clergy and laity. Atter the establishmeot of Christianity, the Eastern emperore assomed the rigit of nuosinatiog to somie of the principal sees, rad exercised great influence over the elections generally. Io the W. of Europe the kinge of the barbariaus, after the conversion of their suljerte, arrogated to themelves similar anthority, which whe jeabusly counteracted by the see of Rome. In the Middle Ages the Pope assumed in owst cnses the absolote nominntion, which claim has been given up in later times in many Catholic comntries, where the king of pointment. Enghish or modern Gothic letter. What are called

Roman letters were employed in the writings of western Eurupe fron the 5th to abont the close of the 12th cen When printing was first iotroduced, the olject wus to imitate writing; aud the first printed hooks were disposed of as manuseripte, the imitation being so perfect that it required great discrimination to distioguish the printed from the written. Books, printed before the year 1500, are generally in the black-letter characters, when, in most European countries, they came to lo superseded by the Rumato. The old Gothic is still io general use in Germaoy, but now mandy bouks are printed chere arso in hizhly prized by antiquaries autl bib-oldmack-letter bre the earlieat.

IBlatk'-work. $n$. Jron wronght by blacksmith 1Blad aler, $n$. [A.S. bledir, bladra, bleddru; Jed. blaira (Anat.) The B. or vesictula armariat, so called to die (Anat.) The B., or vesicula arinaria, 80 called to dis
tinguish it from the gall-bladder, is a munculo-mem branous lag or poach, which serves as a temporary re
 of the urethra - The urimary Hiparatus fo confimel to the red-filouded classos of animule, all of which hat kidneys, whike some orders and kesera have no urinar B. Jin quadrupeds, the $B$. is of a py riform shape, aud is complefely surrormakd by the peritowatm of bining of the aldoruen; and it may le taken as a general cule, that it is smaller, stronger, Had more musenlar it earnivorons than io gramionvorons animaia: in the lat ter it is almost medibrimobs, had in semper of them in particularly large. - Jo the whole class of birds ther a musenlo-membranono bag, whith takse the place of the rectum, $B$., and uterus, and serves as a reservoip for the betid excrearents, the urine, and eges. The arime in these ntimunts diluteve the fircess and forms the shell. Therimary $B$ exists in aceral peneraand s of fivhes. In the humath subject, the $B$. is placed in the pelvis, or basin, immedately behind the symphysis pu-
testives, in the male; bnt it is eeparated from it in the female by the oterus and vagiza. Its fora and relations vary aucording to the age of the iedividnal. In infancy is the abdomen, thns resembling its permanent condition io quadrupeds. At be cousidered as portions, the naror necl, the upper rounded portion, or calledsummit),and portion, or bady. portion, or body; expands, the $B$. ato it and undergoes a remarkable Thas, in the adult its figure is that of a short oval, compressed at the fore and back part ; its lawer surtace subsides on the rec-
tam, and expaudng forms what termed by anatomists the ball find change of form is d mout of the cavity in which not only npon the enlarge apon the weight of the floid which it hathitually snstaine aod thas in nitranced sge it is more deeply sunk in the pelvis than in the middlo periods of life. In the femade it ruosserse dimueter is greatur than in twe male, in coaseqneuce of the antero-pusterior dianeter of the pelvi being eocroached upon by the uterus. Ita capacity varies in the differeut periods of life; and, as a general ritle, it maty be said to increase in proportion as the individual males. Its capacity is modifiel io different iudividuals by their habits adod the watural exercise of its functions. It is more particularly changed by disease; thus, from the effects of long-cuptime icritation, it may be re duced to sttch a state that it will not contain more than few drops of lurine; and on the contrary when, from ny canse, its conteuts candot be dnly evacusted, it may be distonded so as to contsin many quarts of urine, and occupy a large proportion of the abdoneo. Its ordiamy capacity may bo estimated at $11 / 2$ pints.-The direction of the $B$. is-oblique, being incliued somewhat forward anil upwari. It is retaned in its position by two lateral the the lateral ligaments ure prolongations of tho foscia name of fascia pelvicu, and becomers identified with tho prustate gland sod side of the $B$. ; the anterior ligament is double, and it is formed by the fascia transrersalis which pissing down bohind the symphysis pubis, is reflected npon the upper surface of the prostate gland; from the point of reflection two strong fasciculi of tibres pass to the anterior surface of the $B$. These ligaments nre sometimes called the proper ligaments of the $B$, to distinguish thom from certaia folds of the peritonzum
sometimes callod ligaments. The B. is composed of sontetimes callod ligaments. The B. is composed of thrue (by some anatomists regarded as four) coats-the serons or prrtoneal cont, the muscular, tha arentar. and by anatomista into forr pug suse the terior part, which rexts areinat the rectum ; the bod the centre of the orgin' the fundus, the paper partine of the $B$. ; mul the neck, the coutimuation of the latter and the constricted protion which is connecterf with the arethra. Ina work like thas, intendel for gencral remdiar it is quite unnecossary to be more minnte in the anatomy of this organ. The principte distrases and secident to which it is sulyect will bo examiued under Unisany Organg (Diszases of the)- - Sed also Limidaity, Lituotumi, Woass, \&c.

Blake, Robeat, (blaik,) a celebrsted Eoglish admiral, B. at Bridgewater, 159 N . He was elfacated at Oxford, took part with the Parliauentarians at the beginning
of the civil war, nud served under Colotiel Ficnues at of the civil War, hud served under Colonel Fichnes at Bristol, when that town was taken by Prince Rupert. He afterwards assisted in taking Taunton by surprise, defeuled it noiust Goring with such brarety for two succossive sieges, that he was pulhicly thanked and re warded by Parliament In lGity ho was ppuinted com mateder of the fleet iu conjunction with Detue and Popham; aud soon afterwards suiled in search of Prince Rupert, whose fleet be blockated in Kinsale herbor. The priace afterwards escaping to Lisbon, be was there followed ly B., who demaoded leave of the king of Porhigal to attack him, sud, being refused, be took several of the Portugnese ships coming bome from lirazil laden with treasnre. During his alisence. Prince Rupert nuade sail to the Mediterranean, whither he was followed by $B$., Who attacked hin in the harbor of Malaga, and destroyed
vearly the whole of his fleet. After this, he retnrned to Eagland with several prizes, a cain receiving the thanks of Parliament, by whotur, he was also made $W$ ar den of the Cinque Port*. Soon after this, he reduced the Scilly Isles, Guernscy, and Jersey, for which hewee egain thanked by the llouse, and appointed one of the Conecil of State. On the proppect of a war with the Dutch in $165 \%$, be was appointed sole admiral of the fiect, snd was attacked in the Downs by Van Tromp who had 45 suil, while $B$. hidd ouly 23 . He fought however, with such determiuation, that the Dotch admiral was glad to retreat. In the Nuvember folluwing, Van Tromp sailed iuto the Downs, with above 80 men-of Wur, nud nf the Gordwia Sands, on the $29 t h$ of that mouth, an oustimite battle was fooght letween him wnd pelled to run with his shatteroul ships into the Thamed It was on this occasion that Yan Trump passed throug the English Chsonel with a brom at his maintow, हig nifying that he had swept the sea of the English ships. 16 February, I653, B. was euabled to put to sea with ko men-of-war, and off Cupe La llogue fell in with the Dutch, who had an equil number and 300 merchnntmen under couvoy. A must bloody engngemeat enshed which lasted three days, snd iu whiels the Dutch lost 11 men-of-war and 30 merchant-vessels, while the English lust only I ship. In June following, the fleets of the belligerent admirals fonght again off the Foreland; nim the Dutch sustaming raevere deteut. marely saved themsailed into the Muditerrauent where he demolinud $B$ castle of Tumis because the Dey refneed to deliver up the English whom he held as cantires. A squadron of his slips, also, under the command of Captain Stayner, intercepted a Spsoish Plate flect, and tork the adairal, yice-admiral, snd two gallcons, $B$. having received information that another Plate flect lay no Sanin Cruz in Teneriffe, sailed thither, und notwith-tunding tho streogth of the place, boldly went in. burnt the ships, aud came out with comparatively little luss, while the slanghter of the Sp:niards wus inmornse. For this, he aguin received the thanks of P'aliabient, and was pre wards returoed to lis stution at Cadiz, but lis II hentth invired him with atroug dusiro to return to England; and necordingly he bet anil for his mativel land but died as his suip was entering l'lymouth harbor August 27 , 1657 . B1a'key, Robert, Ph.D. an English nuthor: b, at Morpeth, Northumberland, 1745. Devoting himself early in
life to literature and philosuphy, he published in 1 and life to literature and philosuphy, he publishad in Ind!
his first regular work on The Freedom of the Ihvine and his first regular work ins The Freedon of the lrvine and
Human Wills. which was tavorably received, and bronght bitu into notice anoong nbstract thinkwres. It Was followed in $18: 3$ by his History of Uhral Science This work has sincr liecome a text-huok in many of the Logic, chiefly with a view to popularize this brauch of knowledye. Dr. B. publishod several otlrer volumes among which may be meotioned The Lives of the ITimi tive Futhers of the whurch, and The History of the Phi losophy of Mind. For the last the anthor received com-
meadations trom MM. Victor Cousin, Gioberti, Gruyer, meadations from MM. Victor Cousin, Gioberti, Gruyer
and mumerous Gernain savans, nnd is gold medal from and numerous Gernan savans, and it gold nudal romb
the King of the Belgians. In 1835 he was appointed Professur of Logic and Metaphysics in Quecn's Col lege, Belfast, which he relinquished on atconnt of ill
health. His Temporal Bmpfits of Christionity, and bis Historical Sketch of Logic, appeared in rapid succession. is the author of several voluntes on angling and sport ibg topics, and a contributor to the Encyclopadia Britarnica, ete. The University of Jena conturred upon
him the honorary degrue of Ph.D., in rccognition of the him the honerary degree of Ph.D., i
merit of lis philosophical writings.
Blam ahble, $a$. Deserving of blame or censure
Blam'ablemess. $n$. The state of being liable
Blam'ably, adv.
Blame, (blām,) v, a, [Er. blamer; Gr blasphēmeó, from blapsis-blapto, to damage, to hart, and phèmi, to speak.] To speak disparagingly or reproachfully of; to censure braid; to reprimand; to pass an unfavorable judgruent upи.
n. Imputation of a fault; expression of disapprobation; censure; reprehension; fault; crime; sin.
Blame'tal, $a$. Culpable; blamable.
Blame'fully, auv, In a culpable mander: blamably Blame'tess, $n$. Free from blame; gultless; inoucent Blame'lessiy, ade. Innocently; withont fanit. Blane'lewsuess, $n$. Quality of being blameless
Blamer, $a$. One who blumes; a censurer,
Bhane'worininess, $n$. The quidity of deserving
Blame'worihy, $a$. That is worthy of blame
Blane, Jeas Josepa Lous, a French historiat and poItical writer, d. at Madrid, Oct. 28, 1813 , is of Corsican extraction, his mother, nee Estello Pozzo di Borso, be-
longing to the same fanily as the celebrated diplomutist longing to the same family as the celebrated diplomatist
of that name. When 19 years old, he went to laris, and wrote for several daily journala, Afterwards, at Arrass he contributed to one of the thost important repubican papers of the Department- the Progres das Pus whish he first published "The Organization of Libor," As he Waz returning home, one evening in 0ct., fiss, be wis flicted a violent blow with a stick on his risht eye The suther of this cowardly assanlt, which was made the day after $L$. B. had published a review of Luvis Bontparte's work, Les Itées Napmieoniennes, was dever dis-
covered. L. B. had a brother younger one year than himself, who was at that time at Rodez, in the depart ment of I'Aveyron, and who entertained so strung a conviction that his brother was being assaulted at the preci-e motaent when it really onccurred, that he was inincident was the origin of Dumas's "Cursican Brothers," the main subject of which is the preternatural sympathe wain snbject of which is the preternaturat sympa-
thy betweet two bruthers. $L . B$. having become a clerk in a notary's office, soon fouud more congenial ovtupation as tutor in a prixate family, and shortly afterwitrds Paris. The impurtaut part that he played in the stomy days of 1848 has become a master of history. IIe was elected a member of the Provisional Goverument, and it has been erroneously asserted that, while serving his country in that capacity, he created sud organized the ously deprecated and opposed, and which, to use the ously deprecated and opposed, and which, to ase the
words of Lamartine, "was the device of his adversaries." This calumny was so ingenionely and inilustrionsly disseminated, to serve the purpose of political inquestionable proffs of its fallacy. I L Luis Blanc, when a member of the Provisional Governmeut, prevailed upon cal offences to abolish eapital putnishment orepentatives of Paris Government had surreodered its power into the bands of the National Assembly, he brought torward and carried the motion for a repeal of the law by which the family of the Bonapartee was doomed to perpetual exile. To
the nbrogation of this law, Louis Napoleon was intebted for permission to return to France, and consurquently for his subsequent wonderfnl guod fortuthe a tuking up his abode in Eogland, may lee briefly atiated A vinlent demonatration was nade, May lo, luth, in favor of Poland, by aumbers of people, who invaded the hat of the
National Assembly. L. B. exerted limself to check this unwarrantable attempt at pupular dictation. Although the workingmen who took part in the demonstration did
not follow his advice, they showed him sympathy and respect, which his enetnies turoed against hinn, mikiog
them the pretext for an attempt to proscribe him. This unfunded charge fedl to the ground, and it was not un-

 was revived, and has prinseription resolved upen, had vuted hy the very mon, thileerl, wholad lint a alurt time before
 L. B.'s literary unitrtakiugs was his Hiverire de Dhx sud exorcised great influmere on political events in France, during the latter phrtion of the reigu of Loons Philippe. llis larger and more important production, the Restory of the French Revolutinn, written during has residence in England, has recently been completed, and eonsists of 12 vols. Historical Revelatums, intentied to rative of events that occorred in poris urter the fall of Louis Philippe's govt., was published in 1859 . B., who French journals, jublishad Letters on Lingloul lsoti. In 18i1, after the tall of the $2 d$ empire, $B$. returned to Paris, and was elected to the Nut. A*spmbly. D. 1882 .
Blate. (Hont, ("Wlite Mountaiu.") the highest $80 \mathrm{~m}-$ mit in Eiropep b blunging to the Alps ot savoy; extending from S.W. to N.L. bet. $45^{\circ} 40^{\prime}$ and $45^{\circ} 5:^{\prime} \mathrm{N}$, Lat. In this
direction it may have a length of alt. 13 m .; its breadth varies from five to six milos. This enornous mase of primitive roek rises far alave the line of perpetual congelation, Hand degrends with great steepness and to a
vast depth on the N.W. und S.E; the vaileys, which vast depth on the A. W. Hnd S.E ; the valleys, which
bound the muntain on these sides, being only between 3,060 and,+ 000 feet above the level of the sea. The valley to the north-west cunsists properly of two valleys, rated of a laterie and of chamman, which are sepatance, but afterwards join one another. The valley of
Cbamouni is the larger, and the place to which ravelChamouni is the larger, and the place to which trivellers commonly resort to have a view of Mont Bhanc,
or to ascend it; the village of Chamonni, or the Prieure, which is dearly in the centre of the valley, is 3,403 feet above the level of the sea. The valley to the sonthcust of the monntain maxs, called the Valley of Encreves, consists propurly of two valleys, which he in the same place nearly at equal distunces from the extrumities of phace monntain-matss. The lowest point of this valley is Cormag giore, situated 3,900 feet alove the level of the sea. The suntheru extremity of the mountain is both united to and separated from the high mountaio-range which extends in a southern direction to the very shares
of the Nediterranean Sena by the Col de Seige. Thes of the Mediterramean sen, by the Col de Seigne. This point of eternad snow, rising ouly to $8,083 \mathrm{ft}$., unites the Valley of Bonneral in Sovoy with the Valley of Entreves in Piedmont, and presents one of the grandest riews on
Mont Blane. The northern extrenity of the monntain is connected with the bigh range which, raming to tain is connected with the laga range which, romming to
the east, separatea the Valais (or Wallis) from Piedmont ; and with another, which, extending in a nurthwtestern darection, divides Suvoy from the Valais, and terminates at no great distance from the Lake of Geners. From the former range it is separated by the Col de Ferret, or Ferrex, a munutain-pass, 7,704 feet above the sia, which connects the Valley of Ferret, or Ferrex, with that of Entreves. From the runge of mountains extending to the Lake of Genwre, Sont Blanc is divided by the
Col de Balme, which unites the Falley of Chamouni Col de Balme, which unites the Valley of Chamouni
with that of Trent in the Valais, and rises to $7,552 \mathrm{ft}$. With that of Trent in the Valais, and rises to i,5oz Th ,
The whole monatain mass enclosed betwren the valley and these three mount in-pheses proleably rises to upwards of 10,000 feet; and, as in this parsllel the souw-lme does nut extend beyoud 9,000 or 9,300 fect. it prolinbly is about 1,000 feet aluove it. A few places where the steepness of the rock does nat sllow the snow to lie. The upper surfice is extremely irregulitr, snd a considerable a umber of rocks rise from it, which, from their resemblance to pyramids or steeples, are called aiguilles, or newdles. Towards its sonthern extremity this extepsive mass of rocks rises to its greatest elevation in that monntain pinuacle properly called Mont Blanc,
whoge summit attains the bejght of about $15,7 \pi 7$ teet whoge summit attains the bejght of ahout 15,777 teet
above the Bea, in $45^{\circ}+1^{\prime} 52^{\prime} \mathrm{N}$. Lat, and $6^{\circ} 44^{2} 22^{\prime \prime} \mathbf{E}$. Lon. When scen from the north or south, it presents the form of a pyramid, descending nearly perpendicularly to the south. When gcen fiom the N. E. or the Villey of Chanuuni, it resemblex the back of a dromedary, and is called by the iohalitants of that valley Bosse de Dronadarve. Near it rises the Aiguillo de Goute to the height of 12,204 feet. Farther to the N.E. the Aiguille da Minh Geatit, 13,902 feet, Still farther to the N.W. stands the Avguille d Argentier, 13,4100 feet high, and to the west
of it the Aiguille de Dru, 12,4fio feet. The most northof it the Aiguille de Dru, 12,4for feet. The most north is only 11,036 feet alnuve the level of the sea. There are still more of these praks, but they have not been nostill more of these buaks, bit they have not been no-
ticed by travelers. Mant Blanc exhilits all the granticed by travelers. Almat blanc exhinits alt the gran

but it is priacipally in the heroic metre of ten syllables that blawk-verse is nsed, and, indeed, by some the urm,
is restricted to that kind of metre. As an examiple of is restricted to that kind of metre. As an examiple of
hlask veree:

Frequently, in dramatic blank-verse, as superDumerary syllible occure at the end of the line, as -

In Hank-verse, the poet is less encumbered than in acy other species of versification; and hence it is particuble emiotione. "The constrained elegance of this kiad of versification (rhyme), and the studied emoothness of the eonuds, answering regularly to each other at the ead of the line, though they be quite consistent with gentle emotions, yet weaken the native force of sublimity; be-
sides that, the eoperfluons words which the poet is oftea obliged to introduce, in order to Gill up the rbyme, tend furtber to enfeeble it." (Blair.) - It is slso free from the full close which rbyme forces upon the ear at the end of with cut er, trint. The Geme prolably of all the withoul eo of modern Europe udmits the greatest vuri ety of hlank-verse measures. From the practice of mod ety of thank-verse measures. From the practice or mod
ery German poets it would appear that auy species nf tro German poets if would appear that any species nf
verse which may be used in that laoguage wirh rhytue may also be used witbont it. In the German translations from Greek and Roman peets we fiod every species of uncieat metre successfully imitated, and of course witheut rhyme. That which approsches nearest to, or rather is identical with, our teu-sylable blank-verse, is atso much osed, as in the following example:

Der blinde Greis erbut sich slsobald,
Wable emen Text, erkiart ibo. wand
Frmabnte, warnte, strafte, tróstete
So herglich. dasa die Thranen mildigl
So herglich, dass die Thranen mildiglieh
lam niedertiossen in dea grauen Bart. - Kosboartar.
Blank'-window, n. (Arch.) See Blank-dooa. Khabselin, (blung'ke, Jerôme ADolphz, a political Freach economist, was a, at Nice, 1798, and educated at the Lyceum there. In Islt, his family quitted Nice,
and young B. went to completa his studles at Parla where he became acquainted with J. B. Say, who induced hims to turn lis attention to the study of political econpry. 1a 18-5, by she recomindatioa, he was appointed Professor of History and of Industrial Ecunomy Say, be was appointed Professor of Industrial Econony Say, be was appointed Professor of Industrial Ecomonay
in the "Conservatoire des Arts et Métiers," and was one in the "Conservatoire des Arts et Metiers, abd wha oae turiere, Commerciale, et Agricole. In June, 1833, be be came a member of the Academy of Moral and Political Sciences. The Academy sent him to Corsica to study the condition of that country, and in 1839 to Algicrs, for the satme purpose. 1a 1841 he visited Turkey. In 1851 the Academy, which highly valued his abilities, requested him to furnish a complete account of London in its financist and other aspecte. This task he exeruted to the satisfaction of the siavaus who employed him. He died at lum on was his master, Say, he wus in fuyor of free trade. ## BLAS

BLAS
BLAZ

BIar'mey, in Ireland, at viliage in co. Cork. It has

Blaw'ket Indatats, a group of rocky ishonds, at the entrance of huste layy, S.W. coast of I relmul. Gue of
these, called Tiraght, forms the westeromest land in Enrope.
Blasplıenné, u, a. [Fr, blasphême; Gr. Mlasphēraeō. Si BLase.! To speak injuriously, reprowifully, and irre erently of the Supreuse Being; to revile, sperak, write reproachfully or mapiously of God or of maced
things. - To speak evil of; to utter abuse or caluany thiugs. - To sperak evil of; to utter
against; to speuk reproachfully of.
"Those who from our labours heap their board,
Blaspheme their feeder, aud forget their lord.
To ntter blasphemy.
Blasphem'er, $n$. One who blasphemes,
Blasphemer, $n$. One who blasphemeres, $n$.
Slaspliemitag, $n$. Tho mot of blasphemy
Elas jhemous, $a$. Uttering or contuping blasphemy
Blas'phemonnly, ade. Io a blasphemous manome
Blas'plieny, $n$. A crime marked for public puniol meot in the laws of most civilized mations, and which
has been regarded as of such enormity liy maay uations as to be punished with death. The word is treek, bat it has found its way ioto the Enelish and several other modern languages, owiag, it is supposed. to the want of
native turms to express with precisiog and lrevity the native turms to express with precision and brevity the
idea of which it is the representative. Etymologicaily it denotes speaking so as to strike or hart; the lusiug to a person' \& face reproachful nod insultang expression In this general way it is used ly Greck writers, nud even cometh euvy, strife, mailiags, evil surmismgs," where th word rendered "railiogs" is, is the origiaal, "blasphe mies." Thus, also, in Mark vii. 22, war S.viour bimsel in enumerating various evil dispositions or practice mentiona, an "evil eye, blaspheny. pride, ficulashoness, bot meaniug, ss it scems, more than the orditury cas of insulting speech. $B$. in this sease, however nuth to be avoided as inmorat atud mischievons, is nut narlsed fluences of norals and religiou, and not provided for by law. In this sense, indeed, the word can hardly b law. Iu this sense, indeed, the word can hardly b
said to be naturalized among us, though it may occusion ally be found in the poets, and is those prose-writer who exercise ao inordiante curiosity in the selection in their terms. But, besides heing ased to denote insulting and opprebrions speech in geueral, it wate used to denot speech of that kind of a peculiar nature, namely, when the object against which it was directed was a persun esteemed sacred, but especially when against God. Among the caoobists, the definition of $B$. is mule to include the deaying God, or the nsserting anything
to be God, which is not God: and this extended application of the term has been received in most Cliristian countries, and punishuents more or less sevire have been denounced agaiast the crime. - In Eughand, by the common law, opeo blasphemy was punishatie by ishment. The kind of $B$. which was thos cogaizable is described by Blackstone to be "denying the being or providence of God, contumelious reproaches of our Sa viour Christ, profane scoffing at the lloly scriptures, or exposing it to coatempt and rflucule," (Conmentarios,
b. iv. c. iv.) All these heads, except the first, seem to b. iv. c. iv.) All these heads, excupt the first, seem to
apring immediately trom the ruot-sense of the word $B$. as they are of that hurtful aod insulting speech which the mon law was called into operation to punish persons guilty of the first of these forms of $B$., it wots voly when the denial was accompanied with opprobrions words of gestures, which seem to be essential to complete the
true crime of $B$. Errors in opinion, even on points which ars of the very essence and being of religion, wer referred is England in early times til the ecclestastics as falliog under the denomination of beretical opiotons (see Heress), to be dealt with by them as other heresies were. There is nothing io the Btatute book under the
word $B$. till we come to the reign of King WillamiII. I word B. till we come to the retgo ot reign an Act was passed, thetitle of whichis "An Act for the mors effectual suppression of $B$. ani Profaneness. It states that "t many persons have of late years openty avowed aud published coany blaspuemoas man in an of the Christian religion, greatly tending to the dishonor of Almighty God, and may prove destructive to the peac aod welfare of this kiogdom;" and euscts that if any person or persons having beeo educated in, or having mate a profession of the Christian religion within this realm, "shall by writing, printiog, teaching, or advised speak ing, detiy any oue of the persons of the IIoly Trinity t be God, or shall assert or maintan that there are mor gods than one, or shall deny the Christian religion t

cloth. - (Crm. aod M.nf.) This process consists in a a ries of operations, by which the natural colors of varions substances are discharged so as to whiten them. It is offected either by the action of various solvents, aided ing fimod; or by the aid of chlorine. Cotton is more easily bleached than lineo, in consequence of its being originally whiter, and having a less powerful attraction for the coloring-matter. In bleaching these goods upon the old principle, warm water is first liberally applied to remove the weaver's paste or dressing; they are then bucked, or boiled in a weak alkaline lye; and after having been well washed, are spread out npon the grass, 80 as to be freely exposed to the joint agencies of light, air, and inoistnre; the hncking and exposnre are alternately repeated as oftenas necessiry; the goodsare then soured,
that is, immersed in water slightly aciduhted by sulthat is, immersed in water slightly aciduhated by sul-
phuric acid; lastly, they are very thoroughly washed and dried. By these operationz the texture of the goods is to a certain extent impaired, and much time is required to complete the process, which cannot be carfied on in the wiater munths. But the exposure upon the bleaching-gronod is now to a great extent discontinued; and the same effect is ohtained, sfter the pro-
cess of bucking, by the action of weak solutions of chlorine or of chloride of line, which, if skilfully nsod, can scarcely be saill to injure the goods more than the long continned exposure. The theory of bleaching has not been satisfactorily developed; bat, from snch experiments as have beed made in reference to it, it appears to be a process of oxidizement, and to depend apansome peculiar influeace of nascent oxygen, or perhaps of factured wool depends partly upon its owa oil and partly unon the partly upon the applications made to it in the loom. tion of fuller's earth and soap; the cloth is then well washed and dried, and is tolerably white. If the slight yellow tint which it retains is objectionable, it is improved by alding a littlestoge-blue to the washing-water, or by exposure to the fumes of buraing sulphar; this latter method, however, renders it more harsh, and if afterwards souped, its yellowishaess returns The color of raw silk depende upon a natural yellow varuish, Whieh is got ril of hy boiling it in white soap and water, and by repeated rinsings. Certainarticles of woven cottoned by the avtion of sulphurous achd, or the fumes of baroing eulphur. Straw is also whitenel by a similar barbing eulphur. Straw is also whitenelf by a similar oparation, am hence bleached straw

That from a patriot of distinguished note,
Have bled and purg' d me to a single vote." - Pope.
Bleeding.in. A discharge of blood.-See Hemorahage. Bleediva, or Blood-lettivo. (Surg.) Any artificial discharge of hloed from the body, performed for the purpose of affording relief, or benefit, to an invalid. Bleeding is divided into general or topical, or constitntional and local. Bleeding from a vein or artery is an example of the first ; leeches, scarifications, and cupping are in-
stances of the litter. Venesection, or phlebotomy, as bleading from a vein is nsually called, is performed in dif ferent parts of the body, though the localities generally selccted are the peck, erm, leg, and foot; the part ly common consent adopted as the must convenient, both
for the patient and for the patient and aurgeon, is the arm.-
The person may be The person may be Hed either lying, eit-
ting, or standing; but ting, or standing; bnt When at all likely to laint during the opera-
tion, the sitting posture should the aitopted. ure should be atopted. ble to prodnce sicknees or faintiog, so as to re lax the mnscles of the body, as in cases of dislocation of the hip-joint and rupture, when the peraon should he bled
standing, and from a Btanding, and from a large opening
arm bas been for bleeding from for bleeding, from the
fact that the veins are fict that the veins aro more pronninent thore, and more easily reach-
ed the bend of the arm than eleowhero. At this npot thore are
 four veins, from any Fig. 372.-vkivs of qaE ARM. one of which the surgen may bleed. Running up the

vein uncende on the inner side, called the erpholic vrm, If vin ancends on the inner side, called the equolic rumm. If
The medina vein of the fore-armanplitn into two liranches. one running cobliquely outward to join the thasilic, and liguely inwarils tujoin the cophatle, mud calles the madian
cqulialic, D. OI thoee four, Ihe median cephalic and me-
dian basilic are the two most generally selected for ths operation. In fieshy and rohnst percons, the median hasilic is the most convemient vein to open, because it in the most prominent, and the largest; but in thin or selected. And for these reasons: that poder the first runs the brachial artery, separated trom the vein, in stoot people, ly some depth of cellular tissue, hat in emachated subjects only divided liy the thin fascia or apunemrosis of the adjacent tendon; while crossing the median sephalic are the nerves of the surrounding cutitransfixing the rein, and wonnding the artery heneath, causing an aneurism; while in the latter the thing to be apprehended is pricking the wervous filaments, and thereby cansing nenralgia. But as every part of the body is beget ly ribles of a similar character, the operator bearing in mind the caution given as respecte the median basilic in persons of spare hathits, and observing the following instructions-must take the hazard, and, as a general rule, select the median basilic vein for his operation. Mode of Proceednng. Before commeacing his operation, handage : the first contiots of tro alips of plint or linen randage: the firat consise of tho slips of lint or linea or compress about an inch sumare, the other a littie larger and thicker; the Lasadage or fillet shonld be a piece of bruad tape or ribbon $11 / 2$ yards long. Hscing arranged these necessary articles, be must provide himself with a busin and the handle of a broom, or any stick of similar proportions. The next dnty is to select a fitting lancet, choosing one with rather broad shoulders, and bending the hlade to nearly right angles with the handle. Hasing selected the vein by grasping the arm for a moment with his hand, to mako the vessels ditend, the operator should place his finger on the vein he purposea to open; and if he fecle an evideut pula practical operator and can open it without danger. The fillet is next to be donbled, and passed twice ronad the arm some few inches abuve the elbow-joint, and drawing it moderately tight, the operator should place the fioger on the rein, to feel if any pulsation exists below ; if satisfactory, the thumb of the left hand is to be pressed on the vein a little below where he intends to open it. The lancet is now to be grasped by the blade, lightly but firmly, between the right thumh and finger, only the point nad balf of the shonlder of the instrumeat protruding, and, resting the hand on the other fingers, he is to inecr the isncet in an abliqne direction brimge np the instrunsent on as straight a line as pug bringe np the instrunsent on as straight a line as pus-
sible-making the wound in the shin the sane size as that in the vein. He then puts down the lancet, and, taking the basin, lifts his thumb from the rein and allows the stream to fall into the vessel in his hand; the broomlandle, or any long stick, is next placed into the pationt"s hand, both ae a reet for the arm and to asoist the flow of blood, which it effects by the contraction of the muscles as be opensand slants lis fiugers on the staff. The amount of blood to be extracted depende upon circumstances and the nature of the disease; the ordinary quantity is frum I2 to 16 onnces. When sufficient has been taken, the bandage is to be noticd, when the blood tape is untied, the thumb is atin to be pluced ou the rein lelow the openine and the erm supported in the operator's hand. Taring up the emallest pled.ret he operator's hand. Taning up the emallest pledget, he
places it ronnd the incision. and, pressing the two edges together, lays the compress on the top of the cut, srenring it with the thunat, while the thicker and larger pledget is being placed above it. He thea shakes out the fillet, and, placing the centre of it on the cumpress, passes first one end and then the other obliquely over and under the ellow, tying the two ende on the cop of the compress; the cut in the vein heals very quickly,
and after a day the bandage may be left off entirely. and after a day the bandage may be left off entirely.
Sometimes, though the opening is sufficiently large. the Sometimes, though the opening is sufficiently large, the
blood will not fow, this often arises from the fillet being tied too tightly. All that is necessary, in that case, is to slacken the bandage so as not to mimede the current in the arteries, and atter a few minutes the blood will flow steadily. Sometimes, in languid constitutions, it io neyessary to plonge the hand and part of the fore arm in hut water to fuduce the blood to flow, When a veill br opened in the foot or instep, the process vein is an uperation of extreme delicacy, and conld never be undertaken with safety by a nou-professionul person, we deem it nnnecensary to descrile the mode of procedure. - We have already spoikill of the opeming of

13lind. The, is a terbi bpplied to those who are de prived of the nee of sight. There is Done of tho seased that afforde such en eudless variety of perceptions, such a food of materials for the mind - the imbsinating, to work upon, ss that of sight. When one consithery the ofitutely greater amonut of intormation that is rectived conclosion that the blind mast be in a macb owre help less und pitiable condition than the thact. In reality, huwerer, this is fonnd pot $k$, be the casp: and verion attempts lave been mate to acconnt for it. The llind as a elass, are lively and chermfal, the deat, ohy am meluncloly, uften morose and sumpicious. "Take," says Dr. Watson, "a boy, it nuty be, of $y$ or 10 yearn uf uge, who has never secn the light, and you will bad him con versiblu, aud ready to give long narratives of past occm redees, \&e. Place by his side a boy uf the camun age, who has had the misfortune to he born deaf, and whareve the codtrast. The latter is insensible to all yon sny, he smiles, perhaps, nod his conmecoance is brightened by ture, nay, reads with attention your featores, aod, by sympathy, reficets your smile or frown. Bat he romain mute, he gives no acconat of pustexpericare or of futur hope, if yon attempt to draw stmething of this surt fion him; the tries to understand awl twakn himself under
 feel for him, and thrn away from a seene too trying under the impression that, ot these tuochidiren wi mik fortone. the comparison is greatly in favor of the blind who appears ly bis laaguage to enter into bll your teel can hardly he regarded os a rational hemgate deat-mote sesses all the reguantages of visual infornultion he pos 6ensation." The canse is not, that the blind pmeness a greater, or anythiog like an equal stock of muterials fior mental operations, but that "they possems an invaluable engine for fowardang theac operatione, however mendy the materials to operate upon artificial laoguage," whuel is the metium of thinkiog: and "its value to a man is nearly e"puivalent to that of his reasumiog taculties." The truth is, that the deaf are far more isolated all their lives from those that hear thun thie blind are from thome "far exceeds, sad ought to exceed, our interest in the

## BLIS

world ; and from all this human sympathy the deaf are almost tutally cut off: while the blind, excused from pecaliarly free to indulge in gossip with their more favored neighbors, and can largely exchange opinions with them. Moreover, the bliod can scarcely fail to fiod their own tastea suited in some portion of the talk of their neighbore " "-" whilst the deaf, unless they have a great aptitnde for such occupatiovs as employ the eye and the hand, are far more narrown the blind" There studies and mich more solitary than the blinind poets,
have been blind travellers, like Holman; blind poun liks lfomer, Milton, and Blacklock, blind divines, like Lucis and Tronghton: blind mathematicians, like Saunderson and Muyes; blind naturalists, lise lluber; Hilind historians like Prescott; blind muxiciags, blind sculpturs, blind mechanicians; indeed, Dr. Keid asserts that sight discovers almost nothiag which the blind may not comprehend" But their conceptions of many thingo must, at least, be very imperfect; light, colk $r$, and space, must ever be words which they cannot fully realize. The blind are able to make up, in great measure, for their
want ot sight by the greater develepment of their other want ot sight hy the greater development of their other senses. By assiduons application and attention, the senses of touch and hearing to distingnish colors by means of tonch; but this seems very doubtful. By accirately distinguishiog the varions kinds and mohfications of sumbi, thy are nble to form correct ideas on many subjects. Much, too, depends upon the memory, which, from exercise, becomes much nore retentive that in then not deprived of sight. Tbe $B$ institntions of the U.S. are not nuere asylnms, but educational establishments, in which the blind receive a thorongh education. "They are socially far above
those of any other country ; largo numbers of them thoss of any other country l large num
becoure eminent scholars and musicians
Blavo, Lovcation of tar. It was not till towards the close of the last century tast any eflort was made of the the elupurpose was that of Paris, founded in 1784 . It was folpurpose was that of Paris, founded in 1.58, It was fonestallished in $\mathrm{F} 990,1791$, and 1800 respectively. Sioce that time schools have been established in raost of the large cities and towns of Great Britain. One great ob-
etacle in the way of the education of the blind, are the etacle in the way of the education of the blind, are the numerous systems that at present arg in use for teach-
ing them to read. M. Havy was the inventor of the art ing them to read. M. Hady wis the inventor of the art
of printing in relief; but varons attempts laid luen of printing in relief; but various attempts had been made before his time to give them a knowledge of letuers. The French systemin Mase Gall, of Elinburgl who euployed only one alphabet in place of two (capiWho employed only one alphabet in place of two (capi-
tal and small letters), and excluded curves and circles. sulstitnting angles and straight lines. He published evereral preparitory books in this style for the use of the blind. A few years later, in 1832, the suciety of Arts in Scotland offered their gold medal for the best alphabet and method of printing for the use of the blind, which was awarded to Dr. Fry. Mr. Alston, of Cliasiow, subsequently made various improvements upoo Dr. Wry's systum, soas to render the letters sharper and noore thugitle. The eystems at present in use may be divided into two
classes - the alphabetical and the artilrury. The alplaclasses - the alphabetical and the artilrury. The alpha-
betical compribe: 1. Alston's system of Roman capitals; 2. the American system of smaller capitals, with serrited figed, The arhitrary aystems are: 1. Lucas's; 2. Ererecs: 3. Muon's ; 4. Let Systeme Braille; and 5. Le Systéme Cartoa. Each of these systema has its advocates and adherents. Books are printed in them; and, as fow blind perauns ever master more than one system, the books of every vther are enintelligible to theu. Mr. ELC. Johnsol, in his "Tangibbe Typography," thas says down the conditions to be satisfied in iny systememployed in the teach-
ing of the blind: " The syatem of entloxsed printing for their nse shonldenlurace at lenst the following fentures: 1. It moat rexeuitle ats nearly as possible tho type in ordi-
 help from wordy which he may have formerly seen, but which now his fingers must decipher; (b) that ho may derive help in learning from any one who can read nu oribinary brok, or, if needrul, that his frieool may be alle toelt in a correct madoer, which othera can rend. 3. The ralsed characters must be clear, sharp, and well-defined which the finger hardened by loog work and the keel tonch of the little child may be sble alike to discera.: The system of Mr. Alston is that which neems to meat
with most favor, as heing that which is mout easily with most favor, as heing that which is moot easml
learnol and moat nourly allied to ordinary lettera. Hi. han simply ndopted the ordinary Roman letters in anch
a form ns to be most eatily felf. Tho American bowky are printed on a modification of Alstoti' plan. 'They are smaller in bulk, sud cheaper in cost than those pulhlimbed in Englind. Tu what are calleal tho arlitrary eyo tunne, in place of the ordinary letters of the alphatet, of thane in tho nystmm of Mr. M. T. Lucan, which profesasta to be to a blind rernon what ateangraphy in to greing perron. Bis alplabet is componged of thirty-six charmeteraton of which represenk doune mettors.

 clammen ur this system is the saving of typres, paper, min be the cune, for the eharacterd ocrupy more aphee than
if the words were all written at foil length in Roman
capitals; whise it must be mach more difficnit to mas. ter, und must cive rise to frequent confusion. The New
Testament in Alston's syatem is comprised within 623 pages. what in Lucas's it occupies s $\$ 1$ The system of Frere is alsos steqographic, founded on Gur aey's shat hand, as that of Locas was on Byrom's. Its distinctive reature, as compared with Lucas's, is, that it is phenetic the characters being iatended to represent the simple and eas of the English language, rather than the letterun nd each word is represented according to its proanncter. The afphabet is compesed of thirty-two char intended to fix aore strongly jo the nemory of the earner the furce of the character. The vowels are re prescated by simple dots, which, in differeat pusitions represent the different vowels, and are divided iato five long and five short. Thers are also twelve rules in vers for teaching the learner how to supply the omitted vowthe arbitrary systems. His alphabet coasists of "the the arbitrary systems, his alphather words six of the Roman letters remain maltered; twelve others have parts left out, so as to be open to the touch; the rest are new and simple forms. It will be fonnd, however, on examination, that the resemblance betweeo Mr. Moon'e letters and the Roman capitals is by no moans so grea as one might expect from his statement. "A letter, be says, "must consist of enly oue or two hines, to he fent by the thick finger of an adnit. The woris are all spent
at full length. Mr. Moon's system is, however, the nlost at full length. Mr. Moon's system is, however, the nost
cumbrons and expeusive that has yet been devised-circumstadees which are much against its popnlarity. A read and write or correspond with each other, was invented some time ago by David Macbeath and Rober Milne, two inmates of the Elinburgh Asylum, and ha been found to noswer its purpose remarkably well. The different letters of the alpliabet are represented by dif rent kideds and combinations of kaots on a cord. hending for his two. The first, or A class, is distinguished by a large round knof; the second or Et class, by a kuot projecting from the line; the third, or 1 class, by a seriee of links, volgarly called " the drommer 8 plait; the fourth, or M class, by a sinple noose ; the fith. or Q class, by cluss by twisted noose. The firat letter of each class is denoted by the simple charicteristic of that claxs. the sectind thy the cluaracteristic aul a commen knot cluse to it: the third by the characteristic and a common knot lualf an inch from it. The mode of teaching the blind by menns of raised music is now little practisel, it being fonnd, from their great strength of memrory, that they are nble to learo very long pieces liy means of the ear alone. Emtoossed maps and giobes are employed for teaching them geography; and in addition to raised maps of the heavens, various ingenious contrivaluces have-been resorted to for makimg them acquanted They 4 board contuining a geries of pentagonal holes, which receive pentagomal pins, representing the ten digits. By the use of such boards they may be carried to nhy extent in arithmetical kuowledge. They may be tanght mathematics by meane of a board fuli of small holes, with a few pine fitted to them, soas to represent certaia letters; while with a cord extended from the difterent points, are formed the lines of the figure or dagram. The success of Suunderson, Moyes, and others, sufficiently proves that blindnces is ou great impediment to knowledge of mathematics; indeed, according to some, the hlitu possess great ndvantiged, In the various edne.f insuudry mamuns cor ations, as in the making of
 words of Dr. Lettom, "He who enablee a hilind person, without nny excenco of lator, the earo his own lizelihood doces him more real survice than if the had peusioned for lite"
Hibulare, Buxp, $n$ ( Phrt.) A term applied to a screch temporarily constructed to shich soldiers from an encmys hie or reconmoissance. It is usianily forme earth tumber encircled with lawem

- Iligh, or honorable hirth; royal lineage; aristocratic
elescent; as, a prince of the blood.

-Murder, or blood shedding; violent taking away of life. - A sanguinary or murderous temperament or dispositivn. (R.) "He was a thing of btood." - Shak.
-Temper of the miad; state of the passions.
The hey.day to the blood is catue, it your age huble," - Shake.
A man of fire or spirit ; a spark; a ruke.
" Rome, tbou bast lost tbe breed of noblo bloods." - Shaks. -The juice of anything: as, the lood of the grape.
Cold blood. stite of temperament in whit. committed premeditatedly, and without sudden impuls - Wiarm blo $x d$. Applied to one of strong passions or $i \mathrm{~m}$ pulsive temper. - To heut the blood. To stir up or inflame
the passiong. the passions.
iquids of the animal ccon the simplest structure, all the liquids of the animal econoory resemble each other. It amount of oryanic particlea; bnt in animals lhigher in the scale of toing, the humors cease to be of the same Dature, nud there is one, distinct from ant the others, destined to nourish the body; this fluid is the blowd. It
not enly nourishets the body, but is the gonrce wheace are drawn all the sucretions, snch as the saliva, urine, bile, and tearsi- 1 ln matomils, birds, reptilee, fishes, and in most noimals of the class Annelides, the blood is red. But in the greater number of the lower amimals the blood presents verivus hues and density, being often thio or watery, and slightly yellow or greee, rose-colored or lilac. It is difficult, therefore, to be seell, and for a long time these animals were called bloodless or exsangunnous. Those unimils with white blood are very il tort have oaly white or $p$ lacolored bluedi on in this category nuy be placed all the nollusca; noib phites, and intestionl worms.- By the use of the micruscope we discover that the blood of a red-blooded aminal is composed of a yellowish trausparent liquid, called scrum, and of a nuabiber of small solit corpuscles. which fluat in the sernm, called blood-ghobulef, discoy-
ered by leuwenhoeck and Malpighi, whose rosearches ered by leuwenhoeck and Malpighi, whose researche
were made soon after the micrnscope was invented. Glabules or Corpuscles of the Blood. Before birth, the globules lave dimeosione, and even a form differsnt from quire. Thus, in the chick quire. Thus, in the chick
the globules are at first circular ; and it is only at a more advancell period of incobbation that the ghik-
ules assmme an ellintic ules Mssmme an elliptic
form. After birth. they never vary. - In all athimuls of the same specics,
the glotules have the the globmles have the
same dimensions sud resame
evemble eachli other in thia respect. It is not mo nith differont speciew. Thar, in $\operatorname{man}_{\mathrm{most}}$ maminala, the plobulet are circular. In the
cancl and llama, howcancl and liama, how-
ever, they arecliptic, In birds, reptiles, batrachia, and dinhes, they nre ellip-
tic. The corpuscles are tic.- The corpascles are
alwaya micruncopic; and It man, and mammals in gencral, thy y areextremevealed, oflate, that in the
 human bloulscarcely any two corpunclessare of precinely
the same suze; some of them bring from 5 to 6 timea the sizo of others. Their average length is atout the of an inch. It would be ponithe, if they were cluwly by a pins healt; anul then tiny red drop which isesom from the puncturo of living flesh by the priek of a noedllo, conglotules are lirger thati in nammals; in the reitile and hinfrothin thy narn still haraser: in the protens they

pearance of a disc, swollen in the middle. It is of a redjelly, but very elastic. The central pucleus is of a jelly, but very elastic. The central nucleus is of a
spheroidal form, and is nut colored. In maomals, the nocleus is not distinct, and the central portion is de pressed; Vut abalegy ioduces us to suppose that, as in pressed; vat abalegy sodoces 46 to suppose that, as in
other auimals, it is ulso present io man. The wonderfol Spectral Atalysis (see Spectris), has already been npphed with marvellous success to the stody of the chap ing and translorming snbetances of our fiesh and bloud. No donbt that in a time not tar distant the composition and fonctions of the corpuscles of the blowd will te pos
itively ascertaincd. For the itively ascertained. For the present, confident as weare that science has not said its lust word, we will proceed
to relate the discoveries already accomplished, withoat to relate the discoveries already acconplished, without
assoming any personal opinion, and availing ourselves of the able study in spectral analysis by Dr. R. Kin है Drowne- - The colorming-inatter of blood (of its red corpuscles) is capable of existing in twost (of of oxidafundumental difference in the action on the spectrom. It may be made to pass from the more to the less oxidized state by the action of redncing agents, and recovers ite oxygen from the air it seems perfectly denionstratted, that this coloring -matter, constituting the die-
tinctive matter of tinctive matter of the red corpuscles, named cruorine, conld easily pass from one state to the other, apd the re-
verse In the more oxidized, the scarlet tate that in verse In the more oxidized, the scarlet state, that ia

crurine; and in its rediveed or tess oxidized state, that in which the red blool-corpuscles give to venons $B$. its purple bue, it is known as purple cruorine. It is hardly Decessary to designate what a consummate explanation these facts affiord, ot the oxyged appropriating and carrying capacity of the red blood-corpuscles, nor what a bonl-jospiring exemplification it is of the achievements of spectral nialyais. In the lungs, the purple cruorive of the red corposcles of venous $B$. appropriates the oxygen frum the atmosphere, atad beconnes scarthe or arterial
cruorine; and in the whole of the gentrul circulution cruorine ; and in the whole of the general circulation, in the mininte blood-chaneels, this crourine of the red glob,oles baviog passed through the arterial part of the purple or renons stite. - Dr. R. F. Browse bas to the purple or venonestate-Dr. R. K. Browne bas calcuown length in a second. Thry nre nat, as is generally believelt, carried by the fluid, as imperled by suenerally contrictions, from the heart, bat move through the liquid blood at a much laster rate than the liquid itself. Euch globule anay, therefore, move at a rate different from time to time, and different from its fellows, althongh, in geaeral terms, they concur or move togethor at a certain rate. Uppon the perception of thie tact, no doubt, will turn maty lature discoveries or the conditiou of varying states of bealth nad disease. Mhakind have
always had a dion iostinct, bitherto nucorrected and onsupperted by science, that many statee of diseas onsppported by science, that Drasy statee of discas
are dependent on the llood. These resulta, high thongh they may be, have bern exceeded, in direct practical consequence to the wurld at large, liy those achieved with the Micro-spectroscope, q.v. An eluinent London optician Mr. Lorty, has, in inventiog and nsing it, snpplied Med ${ }_{2}$. col juripprudence with a new aod certain meaus of iden-
tifying the claracacter and varioty of ilied mool
 Hy it a scrap of blood-stained fabric 1-10th of nu ioch a graire, cuntaining, pussibly, not more than 1-1000th of a graio of red corpuscle coloring-untter, may be ascer-
tained to have received the blood from one or another tained to have received the blood from one or another
source. - Bnt the at present cruwnimy resnlt of these source. - But
olservatione is, that the criorine itself is a surer test ler a fir smaller quantity of sulstance by itself than either the spectroscope or micro-spectrostope call take conant iuverted in a test-tube over nercury, it reduces itself to the state of oxidation of vemus cruorine, und a suall prism will then show the eno-line spectrma, chariwteristic of porplecrnorine; but if a single dropet distilled wa, fill rexgenin sohution (wothe omplet Etate This change of state in the crnorized sulstance, the cruorine, will the at unce showa in the spectroscope: that the
amount of oxygen ly texelf which the cruarine thas mpamount of oxyken ly itself which the cruorine thas np-
prupriates, propriates, and by which it changes its state, wouhl never
be revealed by itself, or in any other way known to us, even by the spectrascope, $q \cdot \sqrt[v]{ },-$ Other globules, spharicai and colorlesb, exist in the Hood, rewerbling grevilly those olswerved in the chyle; from being miugled with the eed globules they nere not readily observed. - In the white blood of thly llivertebrato kingdom, glopules are ulso fomm, but diferent from thooe described; the size varies more in the אume individnal, and their surface has a maspberry sppoaranco; their form is keneratly yphisiciat, bot seem.- Chanpuation of the $B$. The compesition of the $B$. is very complex. In the higher nuimals we fint water.
 jellow coloring-matter; several fatty sulstances, as chonany multa, as chloride of sentinen or mea-milt, sulphate of pothesh, carlonate of muda, hyilrochlorate of potashi, hy yirochlorite of ammonia, the carbonates of lime nul mak. dena, with plumphantes of roin, lione, and maknewia: the acidx: finally, Ireer carlowic moth, nitrogen, ant ux ygrii
hut this complexity But this complexity. krest Unmenh it her, is yet helon ithe revity, for there cerfainly exiat other subintanero in the
 for example, the necretion of the urine frono the $B$., varions matters will then bo fonad mixed with the blood
which could not be previonsly detected, but which aro prusumed to have been present noder the same, or other onkDuwn, formie. - The sabstances ennmerated as euturing into the compusition of the $B$., conpube nearly all
the parts of the auianal econony:- the albumen formis the parts of the aniaial ecunony: the albumen forms the of the many tissnes, , lie fibrio is the cunstituens pasition of the bunts and of sints enter into the comthe whole of the fact known it my bemors, and frem that the materinis destloed to become flesh bile, urine $\delta \mathrm{c}$, already exist in the blood, the wraws whie, urine, uppropriate them merels drawing them from the $B$, but nut forming tocm, and thas there exists soone rebrun for calling the B. liquid flech.- The propertions in which these coustitnent parts of the B. exist, vary much in diflerent anituais; and as repards the solid and liquid elements, they nay differ in the sante individual at difand the was.- In man the globales ere more numerons, also exercises sure in tance parts of the $B$. in man we find 79 this respect. In 100 allnomes, 1 part of sall with and colorint-matter. In birds, the propurtion of witer in the $B$. is less; but in the batraclia and in fishes the amount is grenter. In the frog, for txample, there are 85 parts of water in 100 of the $B$. - Analogons differeaces are ohserved, in comparimg the relative qualities of the serum ond glubnles of the blood in different anihals; whill-ns we sian snusequethy see - there ex ists a romarkable relation betueen the amount of the glotnles and the animal beat. Dirds, of all s oimalr, have the $B$. richest in red globoles: and in them the anisual heat is greatest. Malumals, less warm than tirds, have proportion does cot exceed 5 or reptiles and fislien, the weight of the $B$. $-\mathrm{s}_{\mathrm{p}}$. grav. of $B$. corpuscles, 1.0485 ; of Bermm or ligueor sunguinis, lops, B. Corpuecles, $1 \cdot 0585$; of of various aniasols, according to the refearches of Rudolphi and Tiedenumb:
